Chapter – 1
|| श्रीः ||
With the Commentary "Vimala"
Upanayana Adhyaya (Chapter on Initiation)

Invocation by the Commentator –
Purpose of the Treatise –

The cause of the origin of the world — "When oblations are properly offered into the fire, they reach the Sun; from the Sun arises sight, from sight arises food, and from that food beings are produced." (*Manu.*)
"The Sun is the soul of the universe, of both the moving and the unmoving," (*Shruti.*)
The natural ornament of the sky, shining with many rays like molten gold, the blessed Sun, is present with supreme excellence. ॥ 1 ॥

Having seen the true meaning of the extensive treatise spoken by the first sage (Brahmā), I have undertaken to state it clearly through a composition extremely concise and free from expansion. ॥ 2 ॥

That which is composed by an ancient sage alone is to be accepted, and to say that what is written by man is not proper — this also is not right, because when the meaning remains identical in the scripture which is in the form of mantra, then what special distinction can there be merely due to a difference in letters? That is, none. ॥ 3 ॥

For example, in the treatise composed by Brahmā, it is said "*Kṣititanaya-divasavāro na śubhakṛt*," and in the human-written treatise it is said "*Kujadinam aniṣṭam*." Apart from the difference of reading, what distinction can there be between the one composed by man and the one by the sage? That is, none. ॥ 4 ॥

Having seen excessive elaboration in the scriptures spoken by sages such as Brahmā, my enthusiasm is to compose this scripture in sequence and concisely.

Here Garga—
This entire world was at first enveloped in darkness. There, in the waters, a luminous golden egg arose, from which, being divided into two parts, heaven and earth were formed. From these parts Brahmā, having the Sun and the Moon as his two eyes, was born.

It is also said—
Regarding the origin of the world, many proofs are found: such as Kapila Muni declaring *Pradhāna* (Primordial Nature) as the cause, Kaṇāda accepting *Dravya* and other substances, some holding *Time,* others *Natural Disposition,* and the *Mīmāṃsakas* regarding *Action* as the cause of the world's creation. ॥ 7 ॥

To consider in detail the origin of the world is futile, for the description of this subject would require many other extensive topics. Therefore, leaving aside that context, I shall now describe the limbs of the present *Jyotiṣa Shāstra.* ॥ 8 ॥

The *Jyotiṣa Shāstra,* possessing many divisions, has three sections (*Skandhas*): *Saṃhitā, Tantra,* and *Horā.*
That in which the topics of the entire *Jyotiṣa Shāstra* are described is called *Saṃhitā.*
That in which the motions of the planets are determined through mathematical calculation is called *Tantra.*
Apart from these, that in which the results concerning *Jātaka, Muhūrta,* etc. are determined is called the *Horā Skandha.*

In the *Karaṇa* treatise (*Pañcasiddhāntikā*), I have described the retrogression, course, rising, and other states of the stars and planets (the five planets beginning with Bhīma).
And in the *Horā* treatises (*Bṛhajjātaka, Bṛhadvivāha-paṭala,* etc.), I have elaborately described topics such as birth, journey, marriage, etc. ॥ 10 ॥

Leaving aside the questions of disciples answered by ancient sages, the various narrative episodes, the origin of the Sun and other planets, and other slightly useful topics, for the welfare of living beings I shall describe in this treatise the essential subjects endowed with all purposes. ॥ 11 ॥

Chapter – 2
Sāṁvatsara-sūtrādhyāyaḥ (Chapter on the Aphorisms of the Year)

Now, therefore, we shall explain the *Sāṁvatsara-sūtra* (Definition of Jyotiṣa).

Thereafter, in this chapter, the *Sāṁvatsara-sūtra* (Characteristic of Jyotiṣa) is stated—

One who is new (fresh in study), pleasing in appearance, humble, truthful, not fault-finding in the virtues of others, free from attachment and aversion, firm and well-formed in bodily joints, having complete limbs, hands, feet, nails, eyes, chin, teeth, ears, forehead, and head endowed with excellent marks, beautiful, and grave and noble in speech — such should be the astrologer, for faults and virtues correspond to the form of the body. ॥ 1 ॥

Qualities of the Astrologer –
The qualities of the astrologer are stated as follows — pure, intelligent, eloquent in assembly, fluent, possessed of brilliance, knowing place and time, having a pure mind, fearless in assembly, not overcome by fellow students, knowing gestures, free from vices, skilled in *Śānti* (rituals for averting calamities through Vedic mantras), *Pauṣṭika* (rites increasing longevity, wealth, etc.), *Abhicāra* (magical operations such as destruction, enchantment, expulsion, enmity, attraction, paralysis, motion, etc.), devoted to worship of deities, vows, and fasts, increasing influence by bringing forth wonderful matters through his own science, adept in

question and answer, able to declare *Śānti-karmas* (propitiatory rites) for natural calamities even without being asked, and knowing the meanings of the mathematical (*Gaṇita*), *Saṁhitā*, and *Horā* portions of astrology — such should be the astrologer. ॥ 2 ॥

Characteristics of the Astrologer –
The astrologer should know the divisions of time such as *Yuga, Year, Ayana, Ṛtu, Māsa, Pakṣa, Ahorātra, Prahara, Muhūrta, Ghaṭī, Palā, Prāṇa, Truṭi,* and the subdivisions of *Truṭi*, as well as the spatial divisions such as *Bhagaṇa, Rāśi, Aṁśa, Kalā, Vikala* as expounded in the five *Siddhāntas* — *Paulīśa, Romaka, Vāsiṣṭha, Saura,* and *Paitāmaha* — situated in the section on planetary mathematics.

Forty-three lakh twenty thousand solar years (4,320,000) together with *Sandhyā* and *Sandhyāṁśa* form the measure of the four Yugas (one *Mahāyuga*).
Taking one-tenth of that, i.e., 432,000, and multiplying it by four gives, including *Sandhyā* and *Sandhyāṁśa*, the measure of *Kṛtayuga* = 1,728,000; multiplying by three gives *Tretāyuga* = 1,296,000; multiplying by two gives *Dvāparayuga* = 864,000; and multiplying by one gives *Kaliyuga* = 432,000.

Measure of the Solar Year –
From Aries (*Meṣa*) up to Pisces (*Mīna*), the duration in which the Sun traverses in the *Sāyana* (tropical) path is the solar year.
This year consists of 365 days, 15 *ghaṭīs*, 30 *palas*, and 22.30 (i.e., 365 days, 15 *ghaṭīs*, 30 *palas*, and 22⅓ *vipalas*).

Measure for Knowing the Ayanas –
When the Sun is in the six signs beginning with Capricorn (*Makara*), it is *Uttarāyaṇa* (northern course); and when in the six signs beginning with Cancer (*Karka*), it is *Dakṣiṇāyana* (southern course).

When the Sun is in Capricorn and Aquarius — *Śiśira Ṛtu* (winter);
in Pisces and Aries — *Vasanta* (spring);
in Taurus and Gemini — *Grīṣma* (summer);
in Cancer and Leo — *Varṣā* (rainy season);
in Virgo and Libra — *Śarat* (autumn);
in Scorpio and Sagittarius — *Hemanta Ṛtu* (pre-winter).

According to Brahmasiddhānta, the times such as Prāṇa, etc. –

Further Characteristics of the Astrologer –
The astrologer should know the measures of the four types — *Saura* (solar), *Sāvana* (civil), *Nākṣatra* (stellar), and *Cāndra* (lunar), and also the causes of the arising of *Adhika-māsa* (intercalary month) and *Kṣaya-māsa* (deficient month).

Definition of Adhika-māsa and Kṣaya-māsa –
From the bright Pratipadā (first lunar day of the bright fortnight) to the new moon (*Amānta*) is one lunar month.

If within this lunar month no solar ingress (*Saṅkrānti*) occurs, it is *Adhika-māsa* (intercalary month);
if two solar ingresses occur, it is *Kṣaya-māsa* (deficient month).
Kṣaya-māsa occurs only in three months such as Kārtika, etc., and in the year in which *Kṣaya-māsa* occurs, there fall two *Adhika-māsas.* ॥ 4 ॥

Further Characteristics of the Astrologer –
He should know the commencement (*Pravartana*) and cessation (*Nivṛtti*) of the sixty *Saṁvatsaras* (years) beginning with *Prabhava*, and of the lords of their subordinate divisions—Yuga, Year, Month, Day, and Horā.

Further Characteristics of the Astrologer –
The astrologer should be skilled in discerning the true and false measures among those of solar, etc., values stated in various scriptures; that is, he should be able to judge which among the differing scriptural measures is correct. ॥ 6 ॥

Further Characteristics of the Astrologer –
He should be skilled in knowing the differences in the solar, etc., measures as found in the *Siddhāntas*; the differences in *Ayananivṛtti* (precession); the differences of rising degrees according to equal circles; and the agreement between shadow and water instruments (*Chāyā–Jalayantara Saṅgaṇitaikya*). ॥ 7 ॥

Further Characteristics of the Astrologer –
He should be skilled in knowing the causes of the fast (*Śīghra*), slow (*Manda*), southern (*Dakṣiṇa*), northern (*Uttara*), debilitation (*Nīca*), and exaltation (*Ucca*) motions of the Sun and other planets. ॥ 8 ॥

Further Characteristics of the Astrologer –
He should be one who can describe, in the eclipses of the Sun and Moon, the contacts (*Sparśa*), the releases (*Mokṣa*), their directions, positions, magnitudes, colors, the countries affected, the future planetary conjunctions, and the planetary wars. ॥ 9 ॥

Further Characteristics of the Astrologer –
He should be skilled in knowing the measured orbs (*Kakṣā-pramāṇa*) of each of the planets and the measured longitudes (*Deśāntara*) of each of the countries. ॥ 10 ॥

Further Characteristics of the Astrologer –
He should know the revolutions and positions of the Earth and the stars, latitudes, longitudes, declinations, *Cara-khaṇḍa*, rising of signs, shadows, *Nāḍī*, *Karaṇa*, and other divisions of space, time, and causes. ॥ 11 ॥

Further Characteristics of the Astrologer –
Like pure gold tested by touchstone, fire, and whetstone, he should be a speaker of extremely pure scripture, and through knowing the various types of appropriate (*Sāyuktika*) questions, he should be one possessing definite knowledge. ॥ 12 ॥

Here, the saying of Garga —

He who does not state the meaning in accordance with the śāstra, who, when questioned, does not give even a single answer, and who does not teach the students—how can he be a knower of the śāstra? That is, never. ॥ 13 ॥

Mockery of fools

The fool who, not understanding the purport of the treatise as it is, interprets it contrarily—he is as if going near Brahmā and praising Him like a courtesan. ॥ 14 ॥

Praise of the speech of astrologers

The speech of one who thoroughly knows the śāstra, who can determine the Ascendant by means of instruments such as the shadow and the water-clock, and who thoroughly knows the predictive śāstra—such a describer endowed with qualities—never becomes barren (fruitless). ॥ 15 ॥

Here, the saying of Viṣṇugupta —

A man who is swimming may perhaps cross the ocean by the force of the wind; but the great ocean in the form of the Jyotiṣa-śāstra named the Person Time (*Kāla-puruṣa*) cannot be crossed even in mind by men other than the ṛṣis and sages. ॥ 16 ॥

Difference between the two Skandhas—

In the *Horā-śāstra* also, there are the topics: the signs (Aries, Taurus, Gemini, etc., their forms), *Horā, Dreṣkāṇa, Navāṁśa, Dvādaśāṁśa, Triṁśāṁśa,* the acceptance of the strengths and weaknesses of the signs; consideration of strength by *Dik-bala, Sthāna-bala, Kāla-bala, Ceṣṭā-bala* of the Sun and other planets; injunctions producing wondrous conviction regarding conception and the time of birth—namely, by telling that children were born with the navel-cord wound around, enclosed in the sheath, twins, etc., thus producing faith in the śāstras; results of early death, *Āyurdaya, Daśā, Antar-daśā, Aṣṭakavarga, Rāja-yoga, Candra-yoga, Dvi-graha-yoga, Nābhasa-yoga*; consideration of *Āśraya, Bhāva, Dṛṣṭi, Nir yāṇa, Gati, Anūka* (former birth); auspicious and inauspicious causes of immediate questions; auspicious and inauspicious indicating causes dependent on the Ascendant; causes for the knowledge of rites such as marriage (initiation, *Cūḍākaraṇa, Gṛha-praveśa*). All these subjects occur. The consideration of these aforesaid topics is well described in the two books composed by Varāhamihira—*Bṛhajjātaka* and *Vivāha-paṭala*. ॥ 17 ॥

Difference in Journey—

In journey: *Tithi, day, Karaṇa, Nakṣatra, Muhūrta, Lagna, Yoga, Aṅga-sphuraṇa, Svapna, Vijaya,* the victory-bath for a king who desires to conquer, sacrifices to the planets, *Gaṇa-yāga* (worship of *Guhyaka* = from seven days prior to the journey, the worship of *Guhyaka*), *Agni-liṅga* (marks of the fire at the time of oblation), the behavior of elephants and horses, by the speech of armies (principal royal persons) their behavior (zeal, lack of zeal), the marks of wind, cloud, rain, etc., the six policies (*Ṣāḍguṇya*—treaty, war, march, halt, dual policy, seeking shelter), knowledge of success and failure according to the control of the planets, remedies

(also knowledge of the success and failure of conciliation, gift, division, punishment), auspiciousness and inauspiciousness, omens, the land for the armies' encampment, the color of fire, ministers, spies, messengers, the application according to time of forest-dwellers, the gain of the enemy's fort—all these are described. ॥ 18 ॥

Here, the saying of the Ācārya —
The *Horā-śāstra* (the Jyotiṣa-śāstra of three skandhas), endowed with portions, is as it were widespread in the world, as if inscribed in the intellect, and as if inlaid in the heart. Its injunction never becomes fruitless. ॥ 19 ॥

Praise of the Saṁhitā—
He who knows the complete essential meaning relating to *Saṁhitā* is a thinker on fate (one who knows actions done previously). ॥ 20 ॥

Divisions of the Saṁhitā—
That in which the subject being spoken of is described—its name is *Saṁhitā.*

The transits of the Sun and other planets; the nature of the planets occurring in that transit; alterations; measure (measure of the disk); color; rays; conjunction (*kiraṇa-kānti*); configurations (arrangements of arches ascending and descending, poles, etc.); setting, rising, course, change of course, retrogression, following retrogression; the conjunction of a planet with the Nakṣatras; movement (in a Nakṣatra); their results; auspicious and inauspicious results for countries from the *Kūrma-cakra* formed by the division of Nakṣatras; the transit of Agastya Muni; the transit of the Seven Ṛṣis (the seven sages beginning with Vasiṣṭha); the dominion of the planets (lordship over regions, substances, beings); the arrays of Nakṣatras (lordship over substances and people); *graha-śṛṅgāṭaka* (auspicious and inauspicious results according to the positions such as the *śṛṅgāṭaka* of stars and planets situated in one asterism); planetary war; planetary conjunctions; the result when a planet becomes the lord of the year; marks of the womb; *Rohiṇī-yoga, Svātī-yoga, Āṣāḍhī-yoga; sadho-varṣaṇa;* the mark of *Kusuma-latā;* knowledge of worldly auspicious and inauspicious (events) through the production of fruits and flowers of trees; *Paridhi* (mark of the anti-solar phenomenon), *Pariveṣa, Parigha* (mark of the oblique cloud-line at sunrise and sunset), wind, meteor-fall, burning of quarters, earthquake, redness of twilight, mark of the Gandharva-city, mark of dust, mark of *Nirdhāta, Ardha-kāṇḍa,* production of grain, mark of Indra's banner and rainbow, *Vāstu-vidyā, Aṅga-vidyā* (the science that knows auspicious and inauspicious results of beings through touch of limbs), *Vāyasa-vidyā* (behavior of crows), *Antara-cakra, Mṛga-cakra* (behavior of deer), *Śrī-cakra* (behavior of horses), *Vāta-cakra,* marks of palaces, marks of images, consecration of images, *Vṛkṣa-Āyurveda* (treatment of trees), *Udgārgala* (availability of water), *Nīrājana* (purifying with pure water by mantras), mark of the wagtail, pacification of portents, peacock-feather painting, clarified butter, blanket, sword, belt, cock, tortoise, cow, buffalo, dog, horse, parrot, man, woman, anxiety concerning grain and town, stool, clay, tearing of cloth, fly-whisk, staff, bed, seat—these marks; test of night; mark of lamp; the mark of auspicious and inauspicious results through tooth-wood, etc. The astrologer should, with concentrated mind, consider in every person of the world and in kings each of the aforesaid marks. A single astrologer is not always capable of determining auspicious and inauspicious results; therefore, the king should appoint, along with an astrologer

satisfied by giving abundant wealth, others who know this śāstra—four astrologers. Of those four astrologers, one should examine the East and the South-east; the second, the South and the South-west; the third, the West and the North-west; and the fourth, the North and the North-east. For, portents such as meteor-fall (meteor-fall, Gandharva-city, Ketu), being seen, vanish immediately. Through their shape, color, smoothness, measure (measure by hand, etc.), and by the impacts of planets and Nakṣatras, auspicious and inauspicious results occur. ॥ 21 ॥

Import of Maharṣi Garga—
The king who does not worship an astrologer skilled in every way and proficient in *Horā-śāstra* and mathematics meets with destruction.

Here, the saying of the Blessed Garga —

Further praise of astrologers—
Even men dwelling in the forest, free from possessiveness and not desiring to take anything from anyone, ask astrologers who know the planets and Nakṣatras. ॥ 23 ॥

Further praise of astrologers—
Like a night without a lamp and a sky without the Sun, a king devoid of an astrologer, not appearing resplendent, wanders on the path like a blind man. ॥ 25 ॥

Further praise of astrologers—
If there be no astrologer, then all subjects such as *Muhūrta, Tithi, Nakṣatra, Ṛtu, Ayana,* etc., all become overturned. ॥ 25 ॥

Further praise of astrologers—
Therefore, a king who desires victory, fame, prosperity, enjoyment, and auspiciousness should go to a learned, excellent astrologer and ask about his future. ॥ 26 ॥

Further praise of astrologers—
A man who in every way desires his own welfare should not dwell in a country without an astrologer, for where astrologers, who are like eyes, reside, there sin does not remain. ॥ 27 ॥

Further praise of astrologers—
A man who studies and teaches the Jyotiṣa-śāstra does not go to hell, and a man who contemplates the Jyotiṣa-śāstra attains establishment in Brahmā's world. ॥ 28 ॥

Further praise of astrologers—
A twice-born who knows the complete meanings of all the words relating to the Jyotiṣa-śāstra is fit to be fed first at a *Śrāddha*, purifier of the row, and worthy of honor. ॥ 29 ॥

Further praise of astrologers
Even those Mlecchas and Yavanas with whom this śāstra resides—when they too are honored like sages, then what to say of the astrologer who is a Brāhmaṇa? That is to say, his worship is certain.

Publication among the Yavanas — Saying
Unquestionable persons —
The astrologer who, hiding his body by the science of *Indrajāla*, secretly understands and tells the intention of the questioner, and who tells questions, etc., by the attainment of *Karṇa-piśācī*—such a one should not be asked everywhere, because he is not a knower of fate (astrologer). ॥ 31 ॥

And other unquestionable persons —
The man who, without knowing the Jyotiṣa-śāstra, calls himself an astrologer and prescribes vows, fasts, etc.—that defiler of the dining-row, sinful one, should be known as a *Nakṣatra-sūcaka* (star-pointer). ॥ 32 ॥

Censure of the *Nakṣatra-sūcakas* —
The man who performs the vows, fasts, etc. told by a *Nakṣatra-sūcaka* goes to that hell named *Andhatāmiva* (like blindness) together with that *Nakṣatra-sūcaka*. ॥ 33 ॥

Further censure of the *Nakṣatra-sūcakas* —
Just as a request made near a corpse lying at a city-gate is sometimes fulfilled, so too the command of fools is sometimes true; but in the highest sense it is never true. ॥ 34 ॥

Censure of foolish astrologers —
The astrologer, intoxicated by knowing but one part of the śāstra—who issues injunctions from greed for obtaining wealth, and whose affection is in a tale different from the Jyotiṣa-śāstra (because, not knowing Jyotiṣa properly, he loves another tale)—such a one the king should abandon. ॥ 35 ॥

Astrologer fit to dwell with the king —
A king desiring victory should honor astrologers who thoroughly know the three *Skandhas—Horā, Gaṇita,* and *Saṁhitā*—and should obey their command. ॥ 36 ॥

Praise of astrologers —
What one astrologer, knowing place and time, accomplishes—one thousand elephants and four thousand horses cannot accomplish.

Here, someone's saying —
Fruit of hearing Tithi–Nakṣatra —
By hearing the discourse on the Moon's Nakṣatra, there is speedy destruction of bad dreams, bad thoughts, bad sights, and bad deeds.

Here, someone's saying —
Praise of the trusted astrologer —
In order to increase his own fame, the astrologer does the king's welfare in such a manner as even his mother and father, kinsmen, and friends do not do. ॥ 39 ॥

Chapter – 3

Āditya-cāra-adhyāyaḥ (Chapter on the Course of the Sun)

Definition of *Ayana* according to someone's opinion —
It is certain that at some time the Sun's *Dakṣiṇāyana* had its commencement from the half part of Āśleṣā, and *Uttarāyaṇa* from the beginning part of Dhaniṣṭhā; otherwise, there would not be mention of this in the earlier śāstra. ॥ 1 ॥

Varāhamihira's own opinion —
At present, from Cancer onward the Sun's tendency is to *Dakṣiṇāyana*, and from Capricorn onward to *Uttarāyaṇa*. The absence of the aforesaid stated meaning is called *vikāra* (deviation). All these become clear by direct observation. ॥ 2 ॥

Method of examination —
At sunrise and sunset, by the sighting of a distant mark, the motion of the *Ayanas* should be tested; that is, standing before a distant tree, etc., observing the Sun at sunrise and sunset, one should test. Then, on the next day, standing at the same place, one should examine whether the Sun is going to the south or to the north of the tree. To whichever side the Sun shifts, in that *Ayana* the Sun should be said to be. Or, in the great circle, by the marks of entry and exit of the shadow, the *Ayana* should be known.

Example —
On ground made level with water, etc., one should draw a circle with the desired radius by means of the diameter; having determined the directions therein, one should inscribe an east–west line, and establish a gnomon in the center of the circle. On the day when the Sun is situated in Aries, at sunrise and sunset the gnomon's shadow will fall exactly on the east–west line. Thereafter, until the end of Gemini, the gnomon's shadow will gradually fall to the south of the east–west line. From Cancer to the end of Virgo, the gnomon's shadow will gradually go to the north. Then, when the Sun is in Libra, the gnomon's shadow will, just as when the Sun is in Aries, fall exactly on the east–west line. Afterwards, until the point of Sagittarius' bow (the solstitial point), the gnomon's shadow will gradually fall to the north of the east–west line. Then, turning back from there, from Capricorn to the end of Pisces, the gnomon's shadow will gradually fall to the south. On the day when the end-points of the two days' shadows lying on the circle's circumference fall at the same place, on that day the cessation of the *Ayana* (solstitial turning) should be understood. ॥ 3 ॥

Result of a Sun afflicted with deviation —
If, not having entered Capricorn, the Sun turns back to the south, he destroys the people situated in the west and south directions. If, not having entered Cancer, the Sun turns back to the north, he destroys the people situated in the east and north directions.

Here, the saying of Garga —

Auspicious result in boundary-transgression —
If the Sun, having crossed beyond the northern *Ayana* (i.e., having entered Capricorn), turns back to the north, he brings about the welfare of people and an increase of grain. Here, the taking of *Uttarāyaṇa* is illustrative; but in *Dakṣiṇāyana* also the result should be said similarly—namely, if, having entered Cancer, the Sun turns back to the south, he brings about the welfare of people and an increase of crops. Only when there is natural concordance (the computational *Ayananivṛtti* and the aforesaid observed *Ayananivṛtti* occurring at the same time) does the aforesaid result truly occur. And when there is motion with deviation, the Sun produces fear among people.

Here, the Blessed Vṛddha-Garga —
If, at a time different from a festival, a planet named Tvaṣṭṛ makes the solar disk dark, he destroys seven kings (of the nine kings of the nine countries from the division of the Nakṣatra *Kūrma* in Chapter 15), and causes destruction of people by weapons, fire, and famine.

Here, the Blessed Parāśara —
The sons of Rahu, numbering thirty-three, are *Ketus*; they are famous by the names *Tāmasa, Kīlaka,* etc. Seeing them in the Sun (the Sun at the time of eclipse), the results are said according to color, position, and form. ‖ 7 ‖

Their auspicious and inauspicious results —
These sons of Rahu named *Tāmasa–Kīlaka*, etc., entering the solar disk give inauspicious results, and entering the lunar disk give auspicious results. But if their form appears like *Dhvāṅkṣa* (crow), *Kabandha* (headless trunk of a man), or *Pra-haraṇa* (weapon such as a sword), then even when entering the lunar disk they give sinful results. ‖ 8 ‖

Causes of the rise of *Tāmasa–Kīlaka*, etc. —
Before the rise of these *Tāmasa–Kīlaka*, etc., there occur these portents: corrupted water, a sky-region pervaded by dust, a fearsome wind charged with particles of earth that destroys mountains, trees, and peaks; fruits and flowers on trees contrary to season; distress among animals and birds, etc., from the Sun's heat; burning in the quarters; *Nirdhāta* (when the wind, struck by wind, descends from the sky to the earth, that is called *Nirdhāta*); earthquake—these portents arise. ‖ 9–10 ‖

Futility of the portents —
If, after the portents of Ketu, *Tāmasa, Kīlaka,* Rahu have occurred, their sight takes place within seven days, then the previously described portents have no separate result. These portents occur because of the rise of these Ketu, etc.; that is, by the prior sight of these portents, the sight of Ketu, etc., is certain. If at some time, for some reason, though the portents have been seen, the sight of *Tāmasa, Kīlaka,* etc., does not occur, then the result should be declared as dependent on those portents themselves. ‖ 11 ‖

Result of the sight of *Tāmasa–Kīlaka*, etc. —
In whatever countries the *Tāmasa, Kīlaka,* etc., situated in the solar disk, are seen, in those countries kings suffer. Ascetics, afflicted by hunger, also, being devoid of their own duty and

noble conduct, taking a weak child in their hands, go to another land. Thieves seize the wealth of good men. Therefore those good men, by heaving long sighs, become narrow-eyed, with emaciated bodies, and with eyes closed from a flow of tears produced by sorrow. Their own king and the weak men afflicted by a foreign country, censuring, declare to others the duty of their own former king. Even though pregnant, the clouds do not give much water; rivers become thin (having little water); and the production of rice becomes very little. ॥ 12–16 ॥

Results from the forms of *Tāmasa–Kīlaka*, etc. —

If a Ketu is seen in the solar disk like a staff, there is the death of a king; if like a headless man, there is fear of disease; if like a crow, there is fear of thieves; and if like a peg, there is famine. ॥ 17 ॥

And further their results —

If the solar disk is pierced by the king's appurtenances—umbrella, banner, fly-whisk, etc.—then there is change of the king; and if pierced by sparks of fire, smoke, etc., it causes destruction of people. ॥ 18 ॥

Further their results —

If the Sun is pierced by one among those previously mentioned piercers of the solar disk, there is famine; if pierced by two or more, there is destruction of the king; and if pierced by the classes—white, red, yellow, black—then he destroys the classes in order: when pierced by the white color, Brāhmaṇas; when by the red color, Kṣatriyas; when by the yellow color, Vaiśyas; and when by the black color, Śūdras. ॥ 19 ॥

Special result —

These great portents such as *Dhvāṅkṣa*, etc., appearing in the solar disk—toward whichever side they are seen, the people of the countries situated in that direction experience fear; as, if the portent is on the eastern side of the Sun's disk, then in the eastern country; if on the southern side, then in the southern country; if on the western side, then in the western country; and if on the northern side, then in the northern country, the people situated there have fear. ॥ 20 ॥

Auspicious and inauspicious results according to the Sun's rays —

If the rays of the upper part of the Sun are of coppery color, the commander-in-chief perishes; if of yellow color, the king's son; and if of white color, the priest. And if they are variegated or smoky in color, people are distressed by thieves or by weapon-strikes. If after seeing the said portent there is not quickly rainfall, then the aforesaid result occurs; if there is rainfall, then the aforesaid result does not occur, and there is welfare for the people. ॥ 21–22 ॥

Results of the Sun's colors according to the seasons —

If the solar disk in *Śiśira* season is coppery or yellow; in *Vasanta* season is green or like the *kuḍumba* (top-knot); in *Grīṣma* season is pale (somewhat white) or like gold; in the rainy season is white; in *Śarad* season is like the womb of a lotus; and in *Hemanta* is like blood—then it is auspicious. If in the rainy season it is clear, or of the same color as in the other seasons, then also it gives auspicious results.

In the Samāsa-Saṁhitā —

Further results from the Sun's color —

If the solar disk is rough (harsh) or white, it destroys Brāhmaṇas; if of red color, it destroys Kṣatriyas; if of yellow color, it destroys Vaiśyas; and if of black color, it destroys Śūdras. If the aforesaid colors are smooth (unctuous), it becomes a doer of good for the classes beginning with the Brāhmaṇas. ॥ 25 ॥

In the seasons, inauspicious colors of the Sun —

In the *Grīṣma* (summer) season, a blood-red solar disk produces fear; in the *Varṣā* (rainy) season, a black solar disk causes want of rain; and in the *Hemanta* season, a yellow solar disk quickly causes fear of disease. ॥ 26 ॥

Further seasonal results of the Sun —

If the solar disk is broken (cleft) by a rainbow, it creates opposition among kings. If in the rainy season it is clear and lustrous, it causes rain immediately (on that very day). ॥ 27 ॥

Further seasonal results of the Sun —

If in the rainy season the solar disk has a luster like that of the *śirīṣa* flower, it causes rain on that very day. If it appears with a luster like a peacock's feather, there is no rain for twelve years.

Here, Vṛddha Garga —

Further results of the Sun —

If the Sun's disk appears dark (blackish), there is fear from insects; and if it appears with a luster like ashes, there is fear from a foreign country. If a hole is seen in the solar disk in the birth Nakṣatra of a king, that king perishes. ॥ 29 ॥

Further results of the Sun —

If in the sky the solar disk appears blood-red like the blood of a hare, there is war. If the solar disk appears of the same color as the Moon, the present king is destroyed and another king takes his place.

Here, Garga —

Further results of the Sun —

In the country where the solar disk appears like the form of a pot, in that country men, afflicted by hunger, give up life; if it appears broken in shape, it causes destruction of people; if it appears devoid of brilliance, it produces fear; if it appears like a gate, it destroys cities; and if it appears like an umbrella, it destroys the country. ॥ 31 ॥

Further results of the Sun —

If the solar disk, trembling, appears rough like a banner or a bow, there is war. If a black line appears in the solar disk, the king is killed by the minister. ॥ 32 ॥

Further results of the Sun —
If a meteor, thunderbolt, or lightning falls upon the rising Sun, the present king dies and another is established in his place.

Here, Parāśara —
Further signs of the Sun —
If every day, at both twilights (sunrise and sunset), the solar disk is surrounded by a *pariveṣa* (halo), or if, being of blood-red color, it rises and sets, then certainly there comes another king. ॥ 34 ॥

Auspicious and inauspicious signs of the Sun at twilight —
If at both twilights the solar disk is covered by clouds having the form of a weapon, it becomes one causing war; and if it is covered by clouds having the form of a deer, buffalo, bird, donkey, or elephant, it becomes one giving fear. ॥ 35 ॥

Pacification of the distress of a Nakṣatra traversed by the Sun —
Just as gold is purified by being tormented by fire, so a Nakṣatra, tormented by the Sun, becomes purified.

Here, Parāśara —
Result of the Counter-sun (*Prati-sūrya*) —
If a Counter-sun is seen on the northern side of the solar disk, there is rain; if seen on the southern side, there is a windstorm; if seen on both sides, there is destruction of the king; and if seen below, it causes destruction of people.

Special — After sunrise, within one *prahara*, when a small piece of cloud comes, then, shining with the Sun's rays, it is perceived like a second Sun; that is called *Prati-sūrya* (Counter-sun). ॥ 37 ॥

Further result of the Sun's color —
A solar disk in the sky that is red like blood, or red by a mass of dust, destroys the king very quickly. ॥ 38 ॥

Further result of the Sun's color —
If the solar disk, being black, variegated, or blue, appears fearsome to behold, or if at twilight terrifying sounds of birds and wild animals are heard, there is destruction of people. ॥ 39 ॥

Auspicious signs of the Sun —
A solar disk that is pure, unbroken, distinct, exceedingly clear, possessed of long rays, having an unaltered body, color, and marks—such a one produces auspiciousness for the world.

Chapter – 4

Atha Candra-cāra-adhyāyaḥ (Now, the Chapter on the Course of the Moon)

Determination of the Moon's bright and dark halves —
Just as, in the sun, the half of a pot that faces the Sun appears bright, and the other half that is in the opposite direction appears black through its own shadow, in the same way, of the Moon, which is always situated below the Sun, the half that faces the Sun is bright, and the half situated in the opposite direction is black through its own shadow.

Absence of the Moon's own light —
Just as the darkness inside a house is destroyed by the reflection of the Sun's rays falling upon a mirror, so the darkness pertaining to night is destroyed by the reflection of the Sun's rays falling upon the Moon, which is of the nature of a mass of water.

Reason for the increase of the bright part from the western side of the Moon —
As, leaving the region beneath the Sun, the Moon's bright part hangs downwards in whatever manner, in that manner the Moon's risen lower half is illuminated in order by the Sun. ॥ 3 ॥

Daily increase of the bright part in the lunar orb —
Just as, in the afternoon, on the western side of a pot placed in the heat, the bright part increases, so, by moving each day to a place (more) distant from the Sun, the Moon's bright part increases. ॥ 4 ॥

Auspicious and inauspicious results from the Moon's passing through Nakṣatras —
At the time when the Moon passes to the south of these four Nakṣatras—Jyeṣṭhā, Mūla, Pūrvāṣāḍhā, Uttarāṣāḍhā—then seeds, aquatic creatures, and the forest are destroyed. From this it is established that if the Moon passes to the north of the aforesaid Nakṣatras, it is auspicious.

Further results from the Moon's passing through Nakṣatras —
If the Moon passes to the southern part of Viśākhā and Anurādhā, he gives sinful results. If the Moon passes between Maghā and Viśākhā, he gives auspicious results.

In the Samāsa-Saṁhitā —
The Moon's conjunction with the Nakṣatras —
Six Nakṣatras from Revatī (Revatī, Aśvinī, Bharaṇī, Kṛttikā, Rohiṇī, and Mṛgaśirā) unite with the Moon as *Anāgata* (not yet attained).
Twelve Nakṣatras from Ārdrā (Ārdrā, Punarvasu, Puṣya, Āśleṣā, Maghā, Pūrva-Phālgunī, Uttara-Phālgunī, Hasta, Citrā, Svātī, Viśākhā, Anurādhā) unite as *Madhya-saṁyogī* (in middle conjunction).
Nine Nakṣatras from Jyeṣṭhā (Jyeṣṭhā, Mūla, Pūrvāṣāḍhā, Uttarāṣāḍhā, Śravaṇa, Dhaniṣṭhā, Śatabhiṣaj, Pūrvā-Bhādrapadā, Uttarā-Bhādrapadā) unite as *Atikrānta* (already passed).

Its meaning is this: when the Moon goes into Uttarā-Bhādrapadā, at that very time it conjoins with Revatī. In the same way—going into Revatī, it joins Aśvinī; going into Aśvinī, it joins Bharaṇī; going into Bharaṇī, it joins Kṛttikā; going into Kṛttikā, it joins Rohiṇī; and going into Rohiṇī, it joins Mṛgaśirā.

In the twelve Nakṣatras beginning with Ārdrā, conjunction occurs when the Moon moves between each pair of Nakṣatra divisions.

Among the nine beginning with Jyeṣṭhā, the Moon joins the preceding Nakṣatra when it passes into the next—thus, entering Mūla it joins Jyeṣṭhā, entering Pūrvāṣāḍhā it joins Mūla, and so on.

These Nakṣatras are termed by Garga and other teachers as *Ardha-bhogī* (half-enjoying), *Adhyardha-bhogī* (more-than-half-enjoying), and *Sama-bhogī* (equally-enjoying).

In the Brāhma-Sphuṭa-Siddhānta —

Among the ten forms (*Saṁsthānas*) of the Moon, the marks and results of nine are stated —

Nine (*Nau*) Saṁsthāna —

If the Moon's horns are somewhat raised, becoming broad like a boat, it is called *Nau-saṁsthāna*. In this, sailors suffer, and it is auspicious for all. ॥ 8 ॥

Plough (*Lāṅgala*) Saṁsthāna —

If the Moon's horns are half-raised, it is *Lāṅgala-saṁsthāna.* In this, those whose livelihood depends on the plough suffer; among kings there is affection without cause, and there is abundance.

Here, Vṛddha-Garga —

Evil-plough (*Duṣṭa-lāṅgala*) Saṁsthāna —

When the Moon's southern horn is half-raised, the *Duṣṭa-lāṅgala* form arises. In this, the king of the Pāṇḍava country dies, and it causes movement of armies.

Here, Vṛddha-Garga —

Equal-rod (*Sama-daṇḍa*) Saṁsthāna —

If the Moon's horns are equal, then, as on the first lunar day, there will be abundance, prosperity, and rain; that is, just as on the *Pratipadā* day there are abundance, prosperity, and rain, so for a month these continue. If the Moon appears rod-shaped, cows suffer, and the king becomes a harsh punisher.

Here, Vṛddha-Garga —

Bow (*Kārmuka*) and Yoke (*Yuga*) Saṁsthāna —

If the Moon's form is like a bow, it is *Kārmuka-saṁsthāna.* In this there is war, and the king on the side where the bowstring lies gains victory.

Here, Vṛddha-Garga —

If the Moon's horns are extended toward the south and north, it is *Yuga-saṁsthāna.* In this, there is earthquake.

Here, Vṛddha-Garga —

Side-lying (*Pārśva-śāyī*) Saṁsthāna —

When, in the previously stated *Yuga-saṁsthāna*, the tip of the southern horn is somewhat elevated, it is *Pārśva-śāyī-saṁsthāna.* In this, the wealth of merchants and rainfall perish.

Here, Vṛddha-Garga —
Bent-down (*Āvarjita*) Saṁsthāna —
When, because of great elevation, one horn of the Moon bends downward, it is called *Āvarjita-saṁsthāna.* In this there is famine for both men and beasts.

Here, Vṛddha-Garga —
Circle-marked (*Kuṇḍākhya*) Saṁsthāna —
If around the Moon there appears an unbroken circular line, it is *Kuṇḍākhya-saṁsthāna.* In this, subordinate kings lose their territories.

Here, Vṛddha-Garga —
General signs of the Moon —
In the absence of the aforesaid *Saṁsthānas*, if the Moon's horn is raised toward the north, it brings welfare, growth of crops, and rain; if raised toward the south, it causes famine and fear. ॥ 16 ॥

Further general signs of the Moon —
If one horn of the Moon is dissolved (entirely absent), bent downward, or both are so, then one among the onlookers dies.

In the Samāsa-Saṁhitā —
Result from the form of the Moon —
After describing the kinds of *Saṁsthāna*, the forms of the Moon and their results are stated: if the Moon's disk is small, there is famine; if large, there is abundance. ॥ 18 ॥

Further result from the Moon's form —
If the Moon's disk is medium, it is like a thunderbolt—causing hunger and fear and stirring kings to activity.
If the Moon's disk appears like a drum (*Mṛdaṅga*), there is welfare and abundance.
If the form is exceedingly broad, royal prosperity increases.
If the form is thick, it produces plenty; if thin, it gives abundant (cherished) grains.

Here, Vṛddha-Garga —
Result of the Moon's horn being pierced by Mars and other planets —
If the Moon's horn is pierced by Mars, it causes destruction of great kings dwelling afar.
If pierced by Saturn, it causes fear from weapons and hunger.
If pierced by Mercury, it causes drought and famine.
If pierced by Jupiter, it causes destruction of eminent kings.
If pierced by Venus, it causes destruction of lesser kings.
These results produced by the said planets are slight in the bright fortnight and complete in the dark fortnight.

In the Samāsa-Saṁhitā —

Result of the Moon's disk being pierced by Venus —

If the Moon's disk is pierced by Venus, there occurs terrible death for seven months in the countries of Magadha, Yavana, Pulinda, Nepāla, Bhṛṅgi, Marudeśa, Kaccha, Sūrat, Madra, Panjāb, Kāśmīra, Kulūtaka, Puruṣāda, and Uśīnara. ॥ 22 ॥

Result of the Moon's disk being pierced by Jupiter —

If the Moon's disk is pierced by Jupiter, it destroys for ten months the Brāhmaṇas and grains in the countries of Kandhāra, Sauvīraka, Sindhu, Kīra (mountainous region), and Draviḍa. ॥ 23 ॥

Result of the Moon's disk being pierced by Mars —

If the Moon's disk is pierced by Mars, warriors are destroyed by horses and other vehicles; and it destroys within six months the men and kings born in Trigarta, Mālava, Kaulinda, the leading clans, Śibi, and Ayodhyā, as well as the people and rulers of the countries of Kuru, Matsya, and Śukti. ॥ 24 ॥

In the Samāsa-Saṁhitā —

Result of the Moon's disk pierced by Saturn (distinct from Saturn's own) —

If the Moon is pierced by Saturn, after afflicting for ten months, he destroys warriors, ministers, those of the Kuru lineage, kings situated in the eastern directions, and the Arjunāyana (Pāṇḍu-line) people. ॥ 25 ॥

Result of the Moon pierced by Mercury —

If, having pierced the Moon, Mercury emerges, he afflicts the people of Magadha, Mathurā, and the countries situated on the bank of the Veṇā river, and for the people residing in the western countries he makes the time like the *Satya-yuga*—that is, in those countries people become accomplished in every way. ॥ 26 ॥

Result of the Moon pierced by Ketu —

If the Moon is pierced by Ketu, he destroys all kinds of auspiciousness, health, and abundance, and destroys those whose livelihood proceeds from weapons, and he especially causes distress to thieves. ॥ 27 ॥

Result when a meteor strikes the Moon during an eclipse —

If, upon the eclipsed Moon, a meteor falls, then the king in whose birth Nakṣatra the Moon is seated at that time is destroyed. ॥ 28 ॥

Marks and results of the Moon's color —

If the Moon's disk is rough like ashes, of blood-red color, devoid of rays, black in color, broken, or trembling, it brings famine, quarrel, disease, and fear of thieves. ॥ 29 ॥

Other auspicious marks of the Moon —

As if, for Śiva, Pārvatī had fashioned a Moon—cleaned and exceedingly beautiful—like snow, the *kunda* flower, or a crystal gem; such a Moon, which a man beholds at night, is auspicious for him; that is, the Moon pure like snow, etc., when seen at night by one, brings him complete auspiciousness. ॥ 30 ॥

Auspicious and inauspicious results when the fortnight increases, diminishes, or remains equal —
If, in the bright fortnight, some *tithi* increases, then Brāhmaṇas, Kṣatriyas, and the people grow greatly; when it diminishes, there is loss to them; and when it remains equal, they obtain ordinary results. ॥ 31 ॥

Further results of the Moon —
If the Moon, with motion free from deviation and rays free from deviation, being of a color like the water-lily, lotus-fiber, or a pearl-garland, wanes and waxes according to the *tithi*, he becomes for the victory of men. ॥ 32 ॥

Chapter – 5

Atha Rāhu-cāra-adhyāyaḥ (Now, the Chapter on the Course of Rāhu)

Differing opinions in establishing Rāhu's planet-hood —
According to someone's view, the demon named Rāhu, even after his head was cut off, because he had already drunk the nectar, did not lose life but rather obtained planet-hood.

Here, the Purāṇic view —
Because of being dark, by the boon granted by Brahmā, at times other than the festival times, Rāhu does not appear in the sky like the disks of the Moon and the Sun.

Bhagavān Garga —
Another differing opinion —
According to someone's view, that which has limbs divided into head and tail, whose form is like that of a serpent—that indeed is the form of Rāhu. According to someone's view, Rāhu has no form at all, he is only of the nature of darkness.

Faults in the aforesaid other opinions —
If Rāhu were embodied, moving in the signs, having a head and a disk, then, having determinate motion, how would he devour both the Sun and the Moon situated on the ecliptic (*bhagaṇārtha*)? That is, he could never devour them.

Further fault in the aforesaid opinion —
If Rāhu were of indeterminate motion, how could he be known by calculation? Or, if he has limbs divided into head and tail, why does he not devour the Sun and Moon situated in the second, third, fourth, or fifth sign from himself? ॥ 5 ॥

Further fault in the aforesaid opinion —
If Rāhu were serpent-shaped, then, at the time of eclipse, he would also cover the ecliptic region situated between head and tail when the Sun and Moon are at an interval of six signs from head or tail. ॥ 6 ॥

Fault in the opinion of those who posit two Rāhus —
If there were two Rāhus, then, at the time of the Moon's set in eclipse or rise in eclipse, the Sun situated six signs away from the Moon would also be seen as eclipsed by a second Rāhu of the same motion. The purport is this: those who accept two Rāhus—one with fixed motion and another with unfixed motion—this is not correct; because when, by a Rāhu with unfixed motion, the Moon rises or sets while eclipsed, at that time, above the horizon, in the opposite direction, by the Rāhu with fixed motion, the Sun too should be eclipsed; but such is not seen. ॥ 7 ॥

Stating one's own doctrine, the arrangement regarding contact —
In its own eclipse, the Moon enters the Earth's shadow; and in a solar eclipse, the Sun enters the lunar disk. Therefore, the Moon's contact (first touch) is not on the western part, and the Sun's contact is not on the eastern part. ॥ 8 ॥

Reason for the Earth's shadow occurring at night —
Just as, due to the covering of the Sun, the shadow of a tree spreads to one side, in the same way, due to the covering of the Sun, the Earth's shadow becomes long every night. ॥ 9 ॥

Impossibility of a lunar eclipse at every full moon —
When, being in the seventh sign from the Sun, the Moon, whose motion is eastward, remains at a very slight north or south declination from the circle of declination (*krānti-vṛtta*), then the Moon, moving eastward, enters the Earth's shadow.

In the Brāhma-sphuṭa-siddhānta —
In all countries, the lunar eclipse is seen mostly as of one form, and the solar eclipse as of different forms. The reason is this: like a cloud beneath, the Moon, coming from the west, covers the Sun's disk; therefore in each country a solar eclipse is seen in different forms.

In the Brāhma-sphuṭa-siddhānta —
Cause of blunt-horn (*kuṇṭha-viṣāṇa*) in a half-eclipsed Moon and sharp-horn (*tīkṣṇa-viṣāṇa*) in the Sun —
Because the coverer (occluder = Earth's shadow) of the Moon is great, in a half-eclipsed lunar disk there is a blunt horn (thick cusp). And because the coverer (occluder = lunar disk) of the Sun is small in form (less than the solar disk), in a half-eclipsed solar disk there is a sharp horn (fine cusp).

In the Brāhma-sphuṭa-siddhānta —
Rāhu is not the cause in the eclipses of Sun and Moon —
Teachers endowed with divine vision have stated thus the cause of obscuration (eclipse). In this, not considering Rāhu as the cause is the preservation of the decorum of the śāstra.

In the Brāhma-sphuṭa-siddhānta —
In this way it is established that the eclipse is not produced by Rāhu. But everywhere—from the common folk up to great knowers—the eclipse produced by Rāhu is famed; and in the *Śruti, Smṛti, Purāṇas,* etc., too, the eclipse as produced by Rāhu is renowned.

Reconciliation of the opposition among the people, Śruti, Smṛti–Purāṇas —
Formerly, at an earlier time, Brahmā had given such a boon to Rāhu that, at the time of eclipse, by the oblations offered by the people, your satisfaction would continue. For this reason, at the time of eclipse, the Sun and Moon have the proximity of Rāhu; and because of Rāhu there arises the north–south motion of the Moon.

In the Brāhma-sphuṭa-siddhānta —
In the Siddhānta-śiromaṇi —
Garga and other teachers have stated the causes of eclipses through portents, but through them the knowledge of eclipses is not clear—by no means can the time of eclipse be known through a portent; because, even at a time other than the festival time, the eclipse that occurs through a portent is called a portent. ॥ 16 ॥

According to someone's view, on that Amāvāsyā or Pūrṇimā when there is a conjunction of five planets, an eclipse should not be said to be possible; and before the eclipse, on the eighth day, by pouring oil into water, the direction of contact and release should be known; that is, on the eighth day before the eclipse, pour oil into water; to whichever side it spreads, on that side understand the contact, and on the opposite side the release time.

Here, the saying of Garga —
But this view is not correct; therefore scholars should not accept this. ॥ 17 ॥

In eclipses: measure of obscuration, knowledge of direction, and knowledge of time —
By declination (true latitude) the obscuration of the Sun; by *valana* and true latitude, from the outline, the direction; and from the end of the *tithi* (Amāvāsyā), the determination of the time of eclipse should be made.

From the beginning of a Kalpa, increasing by six months each, the seven festival-times and the deities Brahmā etc. —
From the beginning of a Kalpa, increasing by six months each, there are seven festival-times belonging to the seven deities—Brahmā, Chandra, Indra, Kubera, Varuṇa, Agni, Yama.

Their results —
If an eclipse occurs in the Brahmā-festival, there is advancement of Brāhmaṇas and cattle, welfare, health, and increase of grains.
In the Chandra-festival, likewise there is advancement of Brāhmaṇas and cattle, welfare, health, increase of grains, affliction to scholars, and lack of rain.
In the Aindra-festival, there is mutual opposition among kings, destruction of autumnal grain, and misfortune among people.
In the Kaubera-festival, there is loss of the wealth of wealthy men and abundance.
In the Vāruṇa-festival, there is inauspiciousness for kings, welfare for other people, and increase of grains.
The Āgreya-festival is also called *Mitra*; in it there is increase of grain, health, fearlessness, and rain.
In the Yāmya-festival, there is absence of rain, famine, and destruction of grains.

Festival-times other than these seven are givers of inauspicious results. Just as the seven festivals were stated by increasing six months, at some time, due to portents, the presence of the festival occurs after five, five-and-a-half, six-and-a-half, or seven months, etc. In such a situation, the previously stated seven festivals beginning with Brahmā do not occur. In the festivals other than these, there are famine, pestilence, and want of rain.

Here, the saying of Garga —
Result of a festival occurring before-time or over-time (without time / beyond time)
If an eclipse is seen before or after the computationally determined time of eclipse, it is called, respectively, *velāhīna* (without time) and *ativelā* (over-time) eclipse. In a *velāhīna parva*, there is destruction of the fetus (the marks of pregnancy will be stated later) and the arousal of weapons (war); and in an *ativelā parva*, there is destruction of flowers and fruits, fear, and destruction of grains.

Here, the saying of Garga —
These all I have stated according to earlier śāstra—
The results I have said for a *parva* (festival-time of eclipse) occurring at a time different from the computational eclipse-time are according to earlier śāstra, because the eclipse-time established by astrologers who know explicit computation cannot be otherwise. For, without the operation of longitude-correction (*deśāntara-karma*), there is no shifting of *tithi*—this only astrologers who know computation can know.

Result when both lunar and solar eclipses occur in the same month—
If in the same month both the Sun and the Moon are eclipsed, kings perish either through commotion in their armies or through weapon-strikes.

Here, the saying of Kaśyapa —
Result of the Moon and the Sun rising while eclipsed, or setting while eclipsed—
If the eclipsed Moon or Sun rises or sets, then, respectively, autumnal grain and the king are destroyed. Thus, if the eclipsed Moon rises or sets, the autumnal grain is destroyed; and if the eclipsed Sun rises or sets, the king is destroyed. If a fully eclipsed Moon or Sun is viewed by a malefic planet, they give famine and pestilence.

Here, Garga—
Saying of a Ṛṣi's son—
Seven kinds of results from the eclipsed Moon or Sun from rise to set—
If the Moon or Sun is eclipsed when half-risen, it destroys the Niṣāda caste and all sacrifices. Dividing the measure of the day or night into seven places, the first of the *yuga* is called the first *khaṃśa* measure.

In each *khaṃśa* measure, when there is contact and release, the result is as follows:
— In the first *khaṃśa* of the *yuga*, if the risen Moon or Sun is eclipsed, it destroys those whose livelihood is by fire, the virtuous, Brāhmaṇas, and forest-dwellers (*āśrama-vāsins*).

— In the second *khaṃśa*, it destroys farmers, heretics, merchants, Kṣatriyas, and commanders.
— In the third *khaṃśa*, it destroys painters, Śūdras, Mleccha castes, and ministers.
— In the fourth *khaṃśa*, it destroys the king and the Madhyadeśa, and equalizes the prices of grains.
— In the fifth *khaṃśa*, it destroys quadrupeds, ministers, the inner apartments, and Vaiśyas.
— In the sixth *khaṃśa*, it destroys women and Śūdras.
— In the seventh *khaṃśa* (at the time of setting), it destroys thieves and those dwelling in caves. In the *khaṃśa* in which the release occurs, for the respective persons the aforesaid inauspicious result does not occur, but auspicious result occurs.

Here, the saying of Kaśyapa —

Result of the eclipse according to *Ayana* and direction—

If the eclipse of the Moon or Sun occurs in *Uttarāyaṇa*, it destroys Brāhmaṇas and Kṣatriyas. In *Dakṣiṇāyana*, it destroys Vaiśyas and Śūdras. If Rahu is seen in the directions in clockwise order—north, east, south, and west—he destroys, respectively, Brāhmaṇas, Kṣatriyas, Vaiśyas, and Śūdras. Rahu situated in the intercardinal directions (Īśāna, Āgneya, Nairṛtya, and Vāyavya) destroys Mleccha castes, travelers, and those whose livelihood proceeds from fire (such as *Agnihotrin*, etc.). Now special results are said again for the south, north, east, and west directions. If Rahu is seen in the south, he destroys aquatic creatures and elephants. If seen in the north, he destroys cows and bulls. If seen in the east, he fills the land with water; and if seen in the west, he destroys farmers, servants, and seeds.

In the Samāsa-Saṁhitā

Results of solar and lunar eclipses in the signs beginning with Aries; first, the result in Aries—

From an eclipse of the Sun or Moon situated in Aries, the people of Pañjāb, Kaliṅga, Śūrasena, Kamboja, Oḍradeśa, Kirāta, those whose livelihood proceeds from weapons, and those whose livelihood proceeds from fire are afflicted. ॥ 35 ॥

Result of an eclipse of the Sun or Moon situated in Taurus—

If an eclipse of the Sun or Moon occurs in Taurus, it afflicts those who tend cows (Ahīras, etc.), quadrupeds, and venerable persons. ॥ 36 ॥

Result of an eclipse of the Sun or Moon situated in Gemini—

If an eclipse of the Sun or Moon occurs in Gemini, it afflicts excellent women, the king, persons like the king (such as ministers), living beings endowed with life, those who know the arts (painting, song, dance, and instrumental music), those dwelling on the bank of the Yamunā river, the *Bāhnika* (steadfast men; "*bāhnikam bāhnikam dhīraḥ*" in the *Medinī*), the Madhyadeśa ("Sāketa, Mithilā, Campā, Kauśāmbī, Kauśikī, and—Ahikṣetra, Gayā, Vindhya—this indeed is called the Madhyadeśa") and the people dwelling in the Suja country. ॥ 37 ॥

Result of an eclipse of the Sun or Moon situated in Cancer—

If an eclipse of the Sun or Moon occurs in Cancer, it afflicts Ābhīra (Ahīra; "*gope gopāla-go-saṅkhya go-dhug-āhīra-ballavāḥ*," as said by Amara), Śabara (Mleccha caste;

"*bhedāḥ kirāta-śabara-pulindā mleccha-jātayaḥ*," as said by Amara), Pahlava (a southern royal lineage), those who know hand-to-hand combat, those dwelling in Matsya, Kuru, Śaka, Pañjāb, and the maimed persons. ॥ 38 ॥

Results of eclipses in Leo and Virgo—

If an eclipse of the Sun or Moon occurs in Leo, groups of Pulindas (Mleccha tribes), those dwelling in Mekala (a particular mountain), strong animals, the king and those like the king, and men dwelling in the forest are afflicted. If an eclipse of the Sun or Moon occurs in Virgo, it destroys grain, poets, scribes, those who know the art of singing, those who make a livelihood from stone, the country named Tripura, and regions abounding in grain. ॥ 39 ॥

Results of eclipses in Libra and Scorpio—

If an eclipse of the Sun or Moon occurs in Libra, it destroys those dwelling in Avanti-deśa, those living near the western sea, good men and merchants, and those who dwell in Daśārṇa, Maru, and Kaccha. If an eclipse of the Sun or Moon occurs in Scorpio, it destroys men dwelling in Udumbara, Madra, and Cola countries, trees, men engaged in war, and those bearing hard weapons. ॥ 40 ॥

Results of eclipses in Sagittarius and Capricorn—

If an eclipse of the Sun or Moon occurs in Sagittarius, it destroys ministers, leading men, horses, the Videha country (those dwelling in Mithilā), men who engage in hand-to-hand combat, men dwelling in Pañjāb, physicians, merchants, and those who wield hard missiles. If an eclipse of the Sun or Moon occurs in Capricorn, it destroys fish, the families of ministers, men performing base deeds, those who know mantras and medicines, the aged, and those whose livelihood proceeds from weapons. ॥ 41 ॥

Results of eclipses in Aquarius and Pisces—

If an eclipse of the Sun or Moon occurs in Aquarius, it destroys mountain-dwelling men, men dwelling in the western countries, burden-carriers, thieves, Ahīras, those dwelling in Darada country, leading men, those of Siṃhanagara, and men dwelling in the Barbar country. If an eclipse of the Sun or Moon occurs in Pisces, it destroys substances produced on the sea-shore and in water, forest-dwelling men, the wise, and men whose livelihood proceeds from the sale of water. The results of Nakṣatras should be told by the *Kūrma*-division; that is, in the country into which, by the *Kūrma*-division, falls the Nakṣatra in which the Sun or Moon is eclipsed, the people dwelling in that country are afflicted.

In the Samāsa-Saṁhitā —

The ten "bites" (*grāsa*) of the Sun and Moon—

Savya, Apasavya, Leha, Grasana, Nirodha, Avamardana, Āroha, Āghrāta, Madhyatama, Tamontya—these are the ten bites of the Sun and Moon. ॥ 43 ॥

Marks and results of *Savya* and *Apasavya* bites—

If at the time of eclipse Rahu moves through the *savya* (right/southern) side of the Sun or Moon, the world becomes filled with water, rejoicing, and free from fear. If he moves through the *apasavya* (left/northern) side, afflicting the king and thieves, he destroys the people. ॥ 44 ॥

Marks and result of the bite named *Leha* (licking)—
If Rahu licks the disk of the Sun or Moon like a tongue, it is the bite named *Leha*; in this the Earth, rejoicing, becomes filled with all beings and with water. ॥ 45 ॥

Marks and result of the bite named *Grasana* (swallowing) —
If the third part, fourth part, or half of the disk of the Sun or Moon is seized by Rahu, it is the bite named *Grasana*; in this, the wealth of a prosperous (very opulent) king is destroyed, and those dwelling in a prosperous country are afflicted. ॥ 46 ॥

Marks and result of the bite named *Nirodha* (enclosure) —
If, surrounding the disk of the Sun or Moon on all sides, Rahu sits in the middle region in the form of a lump, it is the bite named *Nirodha*; this gives joy to all beings situated on the earth. ॥ 47 ॥

Marks and result of the bite named *Avamarda* (overpressure) —
If, covering the entire disk of the Sun or Moon, Rahu remains for a very long time, it is the bite named *Avamarda*; this destroys the chief king and the country. ॥ 48 ॥

Mark and result of the bite named Ārohaṇa —
If, after the eclipse of the Sun or the Moon, at that very moment Rahu (the eclipse) is again seen, then it is the bite named *Ārohaṇa*.

Special — This bite named *Ārohaṇa* cannot be obtained from computation; whenever such a situation is suddenly seen, it should be understood as a portent. The Ācārya has stated this mark here according to earlier śāstra. ॥ 49 ॥

Mark and result of the bite named Āghrāta —
If, on account of vapor-bearing exhaled wind, one part of the disk of the Sun or the Moon appears like a mirror soiled, then it is the bite named *Āghrāta*. This produces rain and increase of beings. ॥ 50 ॥

Mark and result of the bite named Madhyatama —
If the middle part of the covered disk is obscured by Rahu and the four sides are clear, then it is the bite named *Madhyatama*. This causes the destruction of the Madhyadeśa and produces abdominal diseases.

Special — Because the occluder (the lunar disk) is smaller than the occluded (the Sun's disk), this bite can occur only in a solar eclipse. But because the occluder (the Earth's shadow) is far greater than the occluded (the Moon's disk), such a situation can never occur in a lunar eclipse. Therefore, in a solar eclipse there is an annular eclipse, and in a lunar eclipse a total eclipse. ॥ 51 ॥

Mark and result of the bite named Tamontya —
If, in the disk of the Sun or the Moon, Rahu is seen more at the edge and a little in the middle

part, then it is the bite named *Tamontya*. In this there is distress to grains and fear of thieves for living beings.

Incidentally, the marks of six kinds of *Ītis* (calamities) —

Result of the color of Rahu at the time of eclipse —
If at the time of the Sun's or Moon's eclipse Rahu's color is white, there is welfare, abundance, and affliction to Brāhmaṇas. If his color is like fire, there is fear of fire and affliction to those whose livelihood proceeds from fire (smiths, goldsmiths, etc.). If it is green, there is increase of diseases and destruction of grains through *Ītis*. If it is yellow, there is destruction of swift-going animals (camels, etc.) and of the Mleccha caste, and there is famine. If it is somewhat red, there is famine, lack of rain, and affliction to birds. If it is smoky, there is welfare, abundance, and slight rain. If it is red like a pigeon, tawny, or dark, there is fear of hunger and famine. If it is like a pigeon or black, it produces disease for Śūdras. If it is yellow like a spotless gem, it destroys Vaiśyas and produces abundance. If it appears like a tongue of fire, it produces fear of fire. If it appears like ochre, there is war. If it appears dark like *dūrvā* leaf or yellow like turmeric, there is pestilence. If it is like the *pāṭala* flower (white tinged with red), there is fear of thunderbolt falling. And if Rahu is seen of the color of dust or variegated, he destroys Kṣatriyas and rain. ॥ 53–59 ॥

Result of planetary aspect on the eclipsed Sun or Moon —
If there is Mercury's aspect on the eclipsed Sun or Moon, he destroys ghee, honey, oil, and kings. If there is Mars's aspect, he produces war, fear of fire, and fear of thieves. If there is Venus's aspect, he destroys the grains on the earth and produces many kinds of troubles. And if there is Saturn's aspect, he produces famine, lack of rain, and fear of thieves. ॥ 60–61 ॥

Result of Jupiter's aspect on the eclipsed Sun or Moon —
The inauspicious results that were stated for the times of contact and release by reason of planetary aspect are destroyed, through Jupiter's aspect, like fire kindled by water. ॥ 62 ॥

Knowledge of another eclipse from the sight of portents during an eclipse —
If, at the time of the Sun's or Moon's eclipse, there occur wind, meteor-fall, a shower of dust, earthquake, darkness, and thunderbolt, then successively, by increasing six months each, another eclipse should be said to be possible. That is: if at the time of eclipse there is a wind-commotion, then six months after the present eclipse-time; if meteor-fall, then after twelve months; if a dust-shower, then after eighteen months; if earthquake, then after twenty-four months; if darkness, then after thirty months; and if thunderbolt, then after thirty-six months—another eclipse should be said.

Here, the saying of Parāśara —
Result of a planet such as Mars being "eclipsed"; first, the result for Mars —
If, being in the same sign with the Sun or Moon and at a small difference of degrees, planets such as Mars are without latitude, then they are called *grasta* (eclipsed). Thus, if Mars is eclipsed, he afflicts the people dwelling in Avanti, those living on the banks of the Kāverī and Narmadā rivers, and proud kings. ॥ 64 ॥

Result of eclipsed Mercury —
If Mercury is eclipsed, he destroys the Antardeśa (the land between the Gaṅgā and Yamunā), Sarayū, Nepāla, the eastern sea, the Śoṇa river, women, the king, warriors, children, and scholars.

Result of eclipsed Jupiter —
If Jupiter is eclipsed, he destroys scholars, the king, ministers, elephants, horses, those dwelling on the bank of the Sindhu river, and those dwelling in the north. ॥ 66 ॥

Result of eclipsed Venus —
Bhṛgu-tanaye rāhu-gate dāśeraka-kaikayāḥ sa-yaudheyāḥ |
Āryāvartāḥ śivayaḥ strī-saciva-gaṇāś ca pīḍyante || *67* ||

If Venus is eclipsed, the people dwelling in Dāśeraka, Kaikaya (Kashmir), Yaudheya, and Śibi countries, and groups of women and ministers are afflicted. ॥ 67 ॥

Result of eclipsed Saturn —
If Saturn is eclipsed, there is destruction of the inhabitants of the desert, of Puṣkara, and of the Saurāṣṭra country, of those dwelling on Mount Aburda, of *anta-jana* (men of low caste), of cow-masters, and of those dwelling on Mount Pāriyātra. ॥ 68 ॥

Results of the months; first, the result for Kārtika —
If, in the Amāvasyā of Kārtika, there is a solar eclipse, and in the Pūrṇimā, a lunar eclipse, then those whose livelihood proceeds from fire (smiths, goldsmiths, etc.), those dwelling in the country of Magadha, kings of the eastern direction, and those dwelling in Kośala, Kalmāṣa, Śūrasena, and Kāśī—these all are afflicted. And it destroys the king of Kaliṅga together with ministers and servants. And it afflicts Kṣatriyas. It produces welfare and abundance in the world. ॥ 69 ॥

Result for Mārgaśīrṣa —
If, in the Amāvasyā of Mārgaśīrṣa, there is a solar eclipse, and in the Pūrṇimā, a lunar eclipse, it destroys those dwelling in Kāśmīra, Kośala, and Puṇḍra, the deer (wild animals), men of the western country, and those who drink *soma*-juice. And in the world there is good rain, welfare, and abundance. ॥ 70 ॥

Result for Pauṣa month —
If, in the Amāvasyā of Pauṣa, there is a solar eclipse, and in the Pūrṇimā, a lunar eclipse, there is disturbance among Brāhmaṇas and Kṣatriyas; the inhabitants of the Sindhu, Kukkura, and Videha countries perish. And there is slight rain in the world, fear, and famine. ॥ 71 ॥

Result for Māgha month —
If, in the Amāvasyā of Māgha, there is a solar eclipse, and in the Pūrṇimā, a lunar eclipse, it afflicts the devotees of father and mother, Brāhmaṇas of the Vasiṣṭha lineage, those devoted to self-study and religion, elephants, horses, and those dwelling in Vaṅga, Aṅga, and Kāśī. And in the world there is rain according to the desire of farmers. ॥ 72 ॥

Result for Phālguna month —
If, in the Amāvasyā of Phālguna, there is a solar eclipse, and in the Pūrṇimā, a lunar eclipse, it afflicts those dwelling in Vaṅgāla, Aśmaka, Avanti, and Mekala, dancers, grain, excellent women, craftsmen who make bows, Kṣatriyas, and ascetics. ॥ 73 ॥

Result for Caitra month —
If, in the Amāvasyā of Caitra, there is a solar eclipse, and in the Pūrṇimā, a lunar eclipse, painters, scribes, those who know the art of singing, those living by beauty (courtesans, etc.), those who know the *Nigama* (Veda), sellers of gold, and those dwelling in Pauṇḍra, Oḍra, Kaikaya, and Aśmaka countries are afflicted. In the world, Indra becomes a wonder-rainer (variegated rain—raining in some places and not in others). ॥ 74 ॥

Result for Vaiśākha month —
If, in the Amāvasyā of Vaiśākha, there is a solar eclipse, and in the Pūrṇimā, a lunar eclipse, cotton, sesame, and green gram are destroyed. In the countries of Ikṣvāku, Yaudheya, Śaka, and Kaliṅga there are disturbances. Yet in the world there is abundance. ॥ 75 ॥

Result for Jyeṣṭha month —
If, in the Amāvasyā of Jyeṣṭha, there is a solar eclipse, and in the Pūrṇimā, a lunar eclipse, there is destruction of kings, Brāhmaṇas, queens, grain, rain, great assemblies, men dwelling in the northern direction, Śālva, country-dwellers, and Niṣādas. ॥ 76 ॥

Result for Āṣāḍha month —
If, in the Amāvasyā of Āṣāḍha, there is a solar eclipse, and in the Pūrṇimā, a lunar eclipse, it destroys those dwelling on the banks (embankments) of water-places (reservoirs, wells, ponds), the flow of rivers, the Gandhāras who pass time by eating fruits and roots, and those of Kāśmīra, Pulinda, and China. And in the world there is ring-like rain (rain in some places). ॥ 77 ॥

Result for Śrāvaṇa month —
If, in the Amāvasyā of Śrāvaṇa, there is a solar eclipse, and in the Pūrṇimā, a lunar eclipse, it destroys those dwelling in Kāśmīra, Pulinda, China, Yavana, Kurukṣetra, Gandhāra, Madhyadeśa, and Kamboja, the one-hoofed (horse, donkey), and the grains produced in the autumn season. Men from other places than the aforesaid countries, being happy through abundant production of grain, fill the whole world. ॥ 78 ॥

Result for Bhādrapada month —
If, in the Amāvasyā of Bhādrapada, there is a solar eclipse, and in the Pūrṇimā, a lunar eclipse, it destroys the countries of Kaliṅga, Vaṅga, Magadha, Saurāṣṭra, Mleccha, Suvīra, Darada, and Aśmaka, and the wombs of women. And in the world there is abundance. ॥ 79 ॥

Result for Āśvina month —
If, in the Amāvasyā of Āśvina, there is a solar eclipse, and in the Pūrṇimā, a lunar eclipse, it destroys those dwelling in Kamboja, China, and Yavana countries, surgeons, those dwelling in

Bāhṛīka country, those dwelling on the bank of the Sindhu river, those dwelling in Ānarta and Pauṇḍra countries, physicians, and Kirātas. And in the world there is great abundance.

The ten releases (*mokṣa*) of the Sun and Moon —
Dakṣiṇa hanu, Vāma hanu, Dakṣiṇa kukṣi, Vāma kukṣi, Dakṣiṇa pāyu, Vāma pāyu, Saṃchardana, Jaraṇa, Madhya-vidaraṇa, Antya-vidaraṇa—these are the ten releases of the Sun and Moon. ॥ 81 ॥

Mark and result of the "South Jaw" perforation —
If, in a lunar eclipse, Rahu withdraws in the south-east (Agni-corner), that is, if release occurs in the Agni-corner, then there is the release named *Dakṣiṇa hanu-bheda* (South Jaw perforation). In this there is destruction of grain, disease of the mouth, affliction to the king, and good rain.

Here, Kaśyapa—
Mark and result of the "Left Jaw" perforation (Vāma Hanu-bheda)
If, being in the north-east (Īśāna corner), Rahu withdraws—i.e., if release occurs in the Īśāna corner—then it is the release named *Vāma Hanu-bheda*. In this, there is fear for the prince, disease of the mouth, fear of weapons, and abundance.

Here, Kaśyapa—
Mark and result of the "Right Flank" perforation (Dakṣiṇa Kukṣi-bheda)
If, in a lunar eclipse, release occurs on the southern side, then it is the release named *Dakṣiṇa Kukṣi-bheda*. In this, princes are afflicted and there is battle among enemies situated in the southern direction.

Special— By computation it is impossible for Rahu to withdraw in the southern direction; according to earlier śāstra the Ācārya has said this—when such a situation occurs, it should be understood as a portent.

Mark and result of the "Left Flank" perforation (Vāma Kukṣi-bheda)
If, at the time of eclipse, Rahu withdraws toward the north (release toward the north), then it is the release named *Vāma Kukṣi-bheda*. In this, there is destruction of the wombs of women and a moderate amount of grain.

Here, Kaśyapa—
Marks and results of the "Right Anus" and "Left Anus" perforations (Dakṣiṇa Pāyu-bheda and Vāma Pāyu-bheda)
If, at the time of release, Rahu is seen in the south-west and north-west corners, then respectively there are the releases named *Dakṣiṇa Pāyu-bheda* and *Vāma (Uttara) Pāyu-bheda*; that is, if release occurs in the south-west corner, it is *Dakṣiṇa Pāyu-bheda*, and if in the north-west corner, it is *Vāma Pāyu-bheda*. In *Dakṣiṇa Pāyu-bheda* there is disease of the anus and the genital and slight rain; and in *Vāma Pāyu-bheda* there is destruction of the queen.

Mark and result of the release named Sañchardana

If, having touched from the eastern part of the lunar disk, Rahu withdraws from that very side (touch and release both on the eastern part of the disk), then it is the release named *Sañchardana*. This release gives welfare, grain, and contentment in the world.

Here, Kaśyapa—

Mark and result of the release named Jaraṇa

If touch is from the eastern part of the lunar disk and release is on the western part, then it is the release named *Jaraṇa*. In this, men, agitated by fear of hunger and war, become shelterless, i.e., there is no protector.

Here, Kaśyapa—

Mark and result of the release named Madhya Vidaraṇa (Central Rending)

If, at the very beginning of the eclipse, light appears in the middle part of the disk, then it is the release named *Madhya Vidaraṇa*. This causes mutual agitation within the king's own armies, and gives abundance and slight rain.

Here, Kaśyapa—

Mark and result of the release named Antya Vidaraṇa (Final Rending)

If, at the time of eclipse, the edge-parts of the Moon's disk are clear and in the middle part there is greater darkness, then it is the release named *Antya Vidaraṇa*. In this, the Madhyadeśa and the grains produced in the autumn season are destroyed.

Here, Kaśyapa—

Consideration of the aforesaid ten releases in a solar eclipse also—

These aforesaid releases of a lunar eclipse should be considered in a solar eclipse also. But there, in place of the eastern direction, here the western direction is to be conceived; in place of the western direction, the eastern; in place of the northern, the southern; and in place of the southern, the northern direction. In this way, by reversing the directions, the marks and results of the ten releases should be observed. ॥ 91 ॥

Results of portents occurring within seven days after the eclipse—

If, within seven days after the release, there is a fall of dust, then destruction of grain; if there is *Nīhāra* (fall of hoar-frost; "*avaśyāyaḥ tu nīhāraḥ, tuṣāraḥ tuhinaṃ himam*," says *Amara*), then fear of disease; if earthquake, then the death of the chief king; if meteor-fall, then the destruction of the minister; if a cloud of various colors, then excessive fear; if the roaring of clouds, then destruction of the fetus (the signs of fetus are stated in Chapter 21); if a lightning-strike, then affliction to the king, serpents, boars, etc.; if *Pariveṣa* (halo; "*pariveṣas tu paridhiḥ upasūryaka-maṇḍale*," says *Amara*), then disease and suffering; if burning of quarters, then fear from the king and from fire; if a hard, violent wind blows, then fear of thieves; if *Nirdhāta* (wind struck by wind), if a rainbow is seen, or if there is a *Daṇḍa* (conjunction of the Sun's rays, a ray, and wind), then famine and fear from a foreign country; if planetary war or the sight of Ketu occurs, then there is war among kings; and if there is a shower of clear water, then there is abundance and the destruction of the inauspicious results produced in the eclipse.

In the Samāsa-Saṁhitā —

Result of a solar eclipse following a lunar eclipse—
If, fifteen days after a lunar eclipse, there is a solar eclipse, then injustice arises among the people, and mutual enmity between women and men. ॥ 97 ॥

Result of a lunar eclipse following a solar eclipse—
If, fifteen days after a solar eclipse, there is a lunar eclipse, then Brāhmaṇa-groups enjoy many sacrificial fruits, and the people are gladdened. ॥ 98 ॥

Chapter – 6

Atha Bhauma-cāra-adhyāyaḥ (Now, the Chapter on the Course of Mars)

Mark and result of "Hot-faced" Mars (Uṣṇa-mukha)
Mars has five faces (*uṣṇa*, *aśru-mukha*, *vyāla*, *rudhirānana*, and *nistriṃśa–muśala*): "*uṣṇam aśru-mukhaṃ vyālaṃ rudhirānanaṃ eva ca | nistriṃśaṃ muśalaṃ ceti pañca vaktrāṇi bhū-sute*." Among these, first are told the marks and results of Mars named *Uṣṇa-mukha*. If, from the Nakṣatra in which Mars rises, going to the seventh, eighth, or ninth Nakṣatra he becomes retrograde, then that retrograde Mars is called *Uṣṇa-mukha*. At the rising-time of this *Uṣṇa-mukha* Mars, those whose livelihood proceeds from fire (goldsmiths, blacksmiths, etc.) are afflicted.

Mark and result of "Tear-faced" Mars (Aśru-mukha)
If, from the rising Nakṣatra, in the tenth, eleventh, or twelfth Nakṣatra Mars becomes retrograde, then he is called *Aśru-mukha*. This retrogression produces taint in juices, and causes increase of disease and lack of rain.

Mark and result of "Serpent-faced" Mars (Vyāla-mukha)
If, from the Nakṣatra in which Mars sets, going to the thirteenth or fourteenth Nakṣatra he becomes retrograde, then that retrograde form is called *Vyāla-mukha*. From this there is affliction from tusked animals (boar, dog, etc.), serpents, and beasts; and there is abundance in the world.

And Parāśara—
Mark and result of "Blood-faced" Mars (Rudhirānana)
If, from the setting Nakṣatra, going to the fifteenth or sixteenth Nakṣatra Mars turns back (becomes retrograde), then this retrograde is called *Rudhirānana*. At the rising-time of this, there are diseases of the mouth, fear, and abundance.

And Parāśara—
Mark and result of Mars named "Excessively Muśala" (Ati-Muśala)
If, from the setting Nakṣatra, going to the seventeenth or eighteenth Nakṣatra Mars turns back

to the rear, then he is called *Asi-muśala-vaktra* (sword–club-faced). In this, there is affliction from thieves, lack of rain, and fear from weapons.

Here, Garga—

Special result according to combination (Yoga)

If, having risen in Pūrva-Phālgunī or Uttara-Phālgunī Nakṣatra, Mars becomes retrograde in Uttarāṣāḍhā, and afterwards, going into Rohiṇī, sets, then he afflicts the three worlds (heaven, mortal world, and netherworld).

Here, Parāśara—

Further special result according to transit

If Mars, having risen in Śravaṇa Nakṣatra, becomes retrograde in Puṣya, he afflicts kings, and he destroys the people where the direction (from the Nakṣatra *Kūrma*-division) and array (from the Nakṣatra *Vyuha*) of the Nakṣatra in which he rose are situated.

Here, Parāśara—

Further special result according to transit

If, going into Maghā Nakṣatra, Mars becomes retrograde in that very Nakṣatra, he destroys the king of the Pāṇḍava country; and he causes fear from weapons and lack of rain. ॥ 8 ॥

Further special result according to transit

If, having pierced Maghā Nakṣatra, Mars pierces Viśākhā Nakṣatra, he produces famine. If he pierces Rohiṇī Nakṣatra, he produces a terrible pestilence (plague) among people. ॥ 9 ॥

Further special result according to transit

If Mars moves to the south of Rohiṇī Nakṣatra, he causes high prices and lack of rain. If Mars is seen smoky or crested (with a flame), he destroys the people situated on Mount Pariyātra. ॥ 10 ॥

Cloud-destroying combination according to transit

If Mars moves in Rohiṇī, Śravaṇa, Mūla, Uttara-Phālgunī, Uttarāṣāḍhā, Uttarā-Bhādrapadā, or Jyeṣṭhā, he destroys the clouds. ॥ 11 ॥

Excellent, benefic combinations according to transit

The transit and rising of Mars in Śravaṇa, Maghā, Punarvasu, Mūla, Hasta, Pūrvā-Bhādrapadā, Aśvinī, Viśākhā, and Rohiṇī Nakṣatras are more praiseworthy (excellent in giving results). ॥ 12 ॥

Result of class (Varga)

If Mars, with a very clear form, with a color like the blossoms of *Kiṃśuka* and *Aśoka*, with clear, beautiful rays, and with a color like heated copper, moves in the northern declination, he becomes one doing good to kings and giving satisfaction to the people.

Chapter – 7

Atha Budha–cāra–adhyāyaḥ (Now, the Chapter on the Course of Mercury)

Result of Mercury's rising (Budhodayaphala)

Mercury never rises without some portent. That is, whenever Mercury rises, at that time some kind of disturbance surely occurs — such as fear from water, fire, or wind — and it causes either dearness or cheapness of grain.

In the *Samāsa–saṃhitā* —

Result of Mercury according to Nakṣatra

If Mercury, while moving, pierces Śravaṇa, Dhaniṣṭhā, Rohiṇī, Mṛgaśīrṣa, or Uttarāṣāḍhā Nakṣatra, he causes absence of rain and fear of disease.

Here, Kaśyapa —

Another Nakṣatra result of Mercury

If Mercury moves in any of the five Nakṣatras from Ārdrā to Maghā, he afflicts the people with warfare, hunger, disease, drought, and many kinds of distress.

Here, Kaśyapa —

Result of Mercury according to Nakṣatra conjunction

If Mercury moves while joining or piercing any of the six Nakṣatras beginning from Hasta (Hasta, Citrā, Svātī, Viśākhā, Anurādhā, and Jyeṣṭhā), he brings inauspiciousness to cows, increases the value of liquids (like oil, ghee, etc.) and juices (sweet and other tastes), and makes the earth full of various grains.

Here, Kaśyapa —

Another result of Mercury according to Nakṣatra

If Mercury pierces Uttarā–Phālgunī, Kṛttikā, Uttarā–Bhādrapadā, or Bharaṇī Nakṣatra, he destroys the humors (tissues) of living beings — fat, blood, flesh, marrow, bone, and semen.

Here, Kaśyapa —

Another Nakṣatra result of Mercury

If Mercury pierces Aśvinī, Śatabhiṣaj, Mūla, or Revatī, he destroys merchants, physicians, those who make a living by boats, aquatic products, and horses.

Here, Kaśyapa —

Further Nakṣatra result of Mercury

If Mercury, moving while piercing Pūrvā–Phālgunī, Pūrvā–Ṣāḍhā, or Pūrvā–Bhādrapadā, he produces fear of hunger, weapons, thieves, and disease.

Here, Kaśyapa —

The seven motions (*gati*) of Mercury according to Parāśara–tantra

Prākṛta, *Vimiśra*, *Saṃkṣipta*, *Tīkṣṇa*, *Yogāntika*, *Ghōra*, and *Pāpa* — these are the seven kinds of motions of Mercury according to Parāśara–tantra. ॥ 8 ॥

Position of these seven motions according to Nakṣatra

In Svātī, Bharaṇī, Rohiṇī, or Kṛttikā Nakṣatras Mercury is in *Prākṛta* motion;
in Mṛgaśīrṣa, Ārdrā, Maghā, or Āśleṣā — in *Vimiśra* motion;
in Puṣya, Punarvasu, Pūrvā–Phālgunī, or Uttarā–Phālgunī — in *Saṃkṣipta* motion;
in Pūrvā–Bhādrapadā, Uttarā–Bhādrapadā, Jyeṣṭhā, Aśvinī, or Revatī — in *Tīkṣṇa* motion;
in Mūla, Pūrvā–Ṣāḍhā, or Uttarā–Ṣāḍhā — in *Yogāntika* motion;
in Śravaṇa, Citrā, Dhaniṣṭhā, or Śatabhiṣaj — in *Ghōra* motion;
and in Hasta, Anurādhā, or Viśākhā — in *Pāpa* motion. ‖ 9–11 ‖

Duration of Mercury's appearance according to motion (before or after rising/setting)

Before explaining the results, the duration of each motion is stated.
If Mercury is in *Prākṛta* motion, after rising he remains visible for forty days, and after setting remains invisible for forty days.
In *Vimiśra* motion — thirty days;
in *Saṃkṣipta* — twenty-two days;
in *Tīkṣṇa* — eighteen days;
in *Yogāntika* — nine days;
in *Ghōra* — fifteen days;
and in *Pāpa* motion, whether rising or setting, he remains visible or invisible for nine days.

Here, Vṛddha–Garga —

In the *Samāsa–saṃhitā* —

Mercury in *Prākṛta* motion causes health, rain, increase of grain, and prosperity.
In *Saṃkṣipta* motion he gives mixed results (moderate health, moderate rain, moderate increase of grain, and ordinary prosperity).
In the remaining motions (*Tīkṣṇa*, *Yogāntika*, *Ghōra*, and *Pāpa*), he gives opposite results — disease, drought, destruction of crops, and misfortune.

Here, Garga —

According to Devala, Mercury's motion is of four types — *Ṛjvī* (direct), *Ativakrā* (strongly retrograde), *Vakra* (retrograde), and *Vikalā* (irregular).
The duration of these motions from the day of rising or setting is as follows:
Ṛjvī lasts 30 days, *Ativakrā* 24 days, *Vakra* 12 days, and *Vikalā* 6 days.

Results of these motions

Ṛjvī motion benefits the people, *Ativakrā* causes famine, *Vakra* produces fear from weapons, and *Vikalā* causes fear and disease.

Here, Devala —

Result of Mercury's rising and setting according to month

If Mercury rises in Pauṣa, Āṣāḍha, Śrāvaṇa, or Māgha month, it causes fear in the world; and if he sets in these months, it produces auspicious results.

Here, Vṛddha–Garga —

Again, result of Mercury's rising and setting according to month

If Mercury rises in Kārtika or Āśvina, he produces fear of weapons, thieves, fire, disease, water, and famine. ॥ 18 ॥

Result of Mercury's rising or setting with respect to direction
The city that is surrounded by enemies at the time of Mercury's setting becomes liberated at his rising.
According to some learned authorities, if Mercury rises in the western direction, the people living in that quarter attain benefit.

Here, Nandī —
Mark and result of Mercury's disk (Bimba)
If Mercury's disk appears radiant like gold, of color like the parrot, similar to grain or to a sapphire, pure and wide-spread, it is for the welfare of the world.
If the color appears contrary to these, it becomes inauspicious. ॥

Chapter - 8

अथ बृहस्पतिचाराध्यायः **(Now, the Chapter on the Course of Jupiter)**

Marks of the years beginning with Kārtika —
According to the Nakṣatra in which Jupiter rises while abiding, there are twelve years corresponding to the twelve months.

Here, the Ṛṣi's son —
Names and times of the aforesaid twelve years —
By Jupiter's staying in two-by-two Nakṣatras beginning with Kṛttikā, there are twelve years like the twelve months beginning with Kārtika. Among these, only the fifth, eleventh, and twelfth years are of three Nakṣatras each.

Here, Garga —
Result of the Kārtika year —
In the year named Kārtika, those who sustain life by cart (transport) and by fire (smiths, goldsmiths, etc.), and cows—these all are afflicted. There is disease and quarrel among men. But there is increase of red and yellow flowers.

Here, Garga —
Result of the Mārgaśīrṣa year —
In the Mārgaśīrṣa year there is lack of rain; grain is destroyed by wild animals, mice, *śalabha* (locusts), and birds. Among men there is fear of disease, and even from friends there is enmity toward kings.

Here, Garga —
Result of the Pauṣa year —

In the Pauṣa year there is auspiciousness for the world; kings abandon mutual enmity; the price of grain becomes double or triple; and nourishing rites succeed.

Here, Garga —
Result of the Māgha year —
In the year named Māgha there is increase of worship of the Pitṛs, satisfaction to all beings, health, beautiful rainfall, equality in the prices of grains, and gain of friends.

Here, Garga —
Result of the Phālguna year —
In the Phālguna year, in some places there are auspicious rites and grain, but not everywhere are auspicious rites and grain produced. And the misfortune of women, the strength of thieves, and the fierceness of kings increase.

Here, Garga —
Result of the Caitra year —
In the Caitra year there is slight rain, scarce food, well-being among people, mildness among kings, increase of stored grains, and affliction to handsome persons.

Result of the Vaiśākha year —
In the Vaiśākha year, together with the kings, all the subjects become devoted to religion, free from fear, filled with joy, and engaged in sacrificial acts; and all grains increase.

Result of the Jyeṣṭha year —
In the Jyeṣṭha year, kings—born in good families, very wealthy, foremost among many, and knowing dharma—and all grains except *kāṅgnī* (foxtail millet) and *śamī* are afflicted.

Result of the Āṣāḍha year —
In the Āṣāḍha year, in some places there is want of grain, and in some places want of rain; *yoga–kṣema* (acquisition of what is not obtained, and preservation of what is obtained) is moderate; and kings are engrossed in their own affairs.

Result of the Śrāvaṇa year —
In the year named Śrāvaṇa, all grains ripen well; and base (wretched) persons, the sectarian (Veda-blamers) groups, and their devotees are afflicted.

Result of the Bhādrapada year —
In the Bhādrapada year, creeper-grains (such as green gram) and the earlier-sown grains ripen; but grains sown after the beginning of this year do not flourish; and in the world there is abundance in some places and fear in others.

Result of the Āśvayuja year —
In the Āśvayuja (Āśvina) year, there is much rain, subjects entirely joyful, increase of vital strength in all beings, and abundance of food.

In the Samāsa-Saṁhitā, briefly the results of all the years —

Special results of Jupiter through transit in Nakṣatras —

Moving to the north of the Nakṣatras, Jupiter produces abundance and prosperity in the world; to the south, the opposite result (famine and misfortune); and moving through the middle of the Nakṣatras, Jupiter gives moderate result. ॥ 15 ॥

Special results of Jupiter through transit in Nakṣatras —

If Jupiter moves within two Nakṣatras in one year, there is auspicious result; if he moves within two-and-a-half Nakṣatras, there is a moderate result; and if perchance he moves within more than two-and-a-half Nakṣatras, he becomes a destroyer of grains. ॥ 16 ॥

Result of Jupiter's color —

If Jupiter is of the color of fire, there is fear from fire; if yellow, disease; if dark, war; if green, affliction from thieves; if red, fear from weapons; and if smoky, want of rain. If Jupiter is seen in the day, there is destruction of the king; and if, in a night beautified by stars, Jupiter's extensive, clear disk is seen, he makes the subjects entirely healthy.

Here, Parāśara —

From the limb-divisions of the Year-Person (*Saṁvatsara-puruṣa*), the Nakṣatras and their results —

In the Year-Person, Rohiṇī and Kṛttikā are the body; Pūrvāṣāḍhā and Uttarāṣāḍhā the navel; Āśleṣā the heart; and Maghā the flower. If these body, etc., limbs of the Year-Person are pure (free from malefic planets), they give auspicious results. If a malefic planet is in the body (Rohiṇī and Kṛttikā), there is fear from fire and wind; if in the navel (Pūrvāṣāḍhā and Uttarāṣāḍhā), fear of famine; if in the flower (Maghā), loss of roots (principal produce) and fruits (mango, etc.); and if in the heart (Āśleṣā Nakṣatra), destruction of grains.

Here, Kaśyapa —

Method of deriving the Ṣaṣṭyabda (sixty-year) cycle —

From the time of King Śaka (Śālīvāhana), multiply the years that have passed by 11; multiply the product again by 4; to that product add 8589; dividing by 3750, the quotient that is obtained—adding the Śaka year to this—and then dividing by 60, the remainder that remains—dividing that by 5—the quotient is the elapsed *yuga*, and the remainder will be the years, etc., of the current *yuga*. And dividing the number of the said years by 12 and adding the quotient to the ninefold number, then dividing by 4, whatever quotient is obtained, understand Jupiter's position in that number of Nakṣatras. However, at the time of computation, one should reckon from the 24th Nakṣatra; that is, if the quotient is 1, understand the 25th (Pūrvābhādrapadā); if the quotient is 2, understand the 26th (Uttarābhādrapadā) Nakṣatra.

Example —

If one must derive the *saṁvatsara* in Śaka 1876, then multiplying 1876 by 11 gives the product 20636; multiplying that by 4 gives 82544; dividing this by 3750 gives the quotient years 24, the remainder 1133; multiplying 1133 by 12 gives the product 13596; dividing by the divisor 3750 gives the quotient months 3, the remainder 2346; multiplying 2346 by 30 gives the product 70380; dividing by 3750 gives the quotient days 18, the remainder 2880; multiplying 2880 by 60

gives the product 172800; dividing by 3750 gives the quotient *ghaṭīs* 46, the remainder 300; multiplying 300 by 60 gives the product 18000; dividing by 3750 gives the quotient *palas* 4, the remainder 3000; "*arthādhike rūpaṁ grāhyam*"—by this rule the obtained *pala* becomes 5. Therefore the obtained years, etc., are (24।3।18।46।5). Adding to this the desired Śaka-year 1876 becomes 1900/3।18।46।5. In its year-place 1900, dividing by 60 gives the quotient 31 and the remainder, the measure of the Ṣaṣṭyabda, 40।3।18।46।5; therefore the next to the 40th *saṁvatsara*, the 41st *saṁvatsara* named "Pravaṅga," is established in the desired Śaka 1876. In this 5003/18/46/5, dividing by 5 gives the quotient 8 and the remainder 0/3/18/46/5. Therefore, in the ninth *yuga* (Soma), the elapsed years, etc., are 003।18।46।5. ॥ 20–22 ॥

Lords of the aforesaid twelve *yugas* —

Viṣṇu, Surejaya (Jupiter), Balabhit (Indra), Hutāśa (Agni), Tvaṣṭṛ (Prajāpati), the lord of Uttaraproṣṭhapadā (Ahirbudhnya), Pitā, Viśvedevāḥ, Soma, Śakrānala (Indra–Agni), Aśvi (the Aśvinī Kumāras), and Bhaga (the Sun)—these are the lords of the aforesaid twelve *yugas*.

समाससंहिता में**— (In the Samāsa-Saṁhitā)**

Names of the five years occurring within each Yuga, and their deities

Saṁvatsara, Parivatsara, Idāvatsara, Anuvatsara, Idvatsara—these are the five years in each Yuga. Their lords are, in order, Agni, the Sun, the Moon, Prajāpati, and Shiva. That is: Agni is the lord of *Saṁvatsara*, the Sun of *Parivatsara*, the Moon of *Idāvatsara*, Prajāpati of *Anuvatsara*, and Shiva of *Idvatsara*. ॥ 24 ॥

Results of the aforesaid five *Saṁvatsaras*

In the year named *Saṁvatsara* there is moderate rain (i.e., equally in the four months Śrāvaṇa, Bhādrapada, Āśvina, and Kārtika). In the year named *Parivatsara* there is rain in the first part (in Śrāvaṇa and Bhādra). In the year named *Idāvatsara* there is much rain in all four months. In the year named *Anuvatsara* there is rain at the end (in Āśvina and Kārtika). And in the year named *Idvatsara* there is little rain. ॥ 25 ॥

Superior, middling, and inferior parts among the twelve Yugas

Among the previously mentioned twelve Yugas, those whose deities are Viṣṇu, Indra, Jupiter, and Agni are superior; the middle four (whose deities are Prajāpati, the lord of Uttaraproṣṭhapadā, Pitā, and the Viśve-devas) are middling; and the last four (whose deities are Soma, Śakrānala, Aśvi, and the Sun) are inauspicious.

यहाँ पर समाससंहिता में**— (Here, in the Samāsa-Saṁhitā)**

Commencement-time of the first year named *Prabhava* within the sixty-year cycle

When, being in the first degree of Dhaniṣṭhā, Jupiter rises in the month of Māgha, from that time begins, within the sixty years, the first year named *Prabhava*. This year is beneficial for creatures. ॥ 27 ॥

Result of the *Prabhava* year

Although in the *Prabhava* year there is, here and there, lack of rain, here and there the onrush of wind, here and there the wrath of fire, here and there the fear of the six calamities such as

excessive rain, and here and there phlegm-borne diseases, nevertheless the beings dwelling in the world do not experience special distress. ‖ 28 ‖

Names and results of the four years beginning with *Vibhava*

After this, the name of the second year is *Vibhava*, of the third *Śukla*, of the fourth *Pramoda*, and of the fifth year *Prajāpati*. These four years give auspicious results increasingly. In these years the royal policies are such that grains, sugarcane, barley, and the like are well ripened and give good yield, and all beings are fearless, free of hatred, filled with joy, and freed from the faults of Kali (adharma, disease, poverty, sorrow, quarrel, death, etc.). ‖ 29–30 ‖

Names and results of the five *Saṁvatsaras* within the second Yuga

Within the second Yuga there are the five years *Aṅgira, Śrīmukha, Bhāva, Yuvā,* and *Dhātā*. Among these, the first three (*Aṅgira, Śrīmukha,* and *Bhāva*) are auspicious, and the remaining (*Yuvā* and *Dhātā*) are middling. In the first three years the gods (Indra) give sufficient rain and all people remain fearless. In the last two years there is moderate good rain, but in these there are disease and war. ‖ 31–32 ‖

Names and results of the five *Saṁvatsaras* within the third Yuga

In the third (Aindra) Yuga, the five years according to Jupiter's transit are *Īśvara, Bahudhānya, Pramārthī, Vikrama,* and *Vṛṣa*. The first (*Īśvara*) and the second (*Bahudhānya*) years are auspicious, and in them the people become like in the Kṛta Yuga (devoted to dharma, happy, and long-lived). The third year named *Pramārthī* gives mixed/afflicting results. The years named *Vṛṣa* and *Vikrama* produce abundance but also give disease and fear. ‖ 33–34 ‖

Names and results of the five *Saṁvatsaras* within the fourth Yuga

Within the fourth (Hutāśa) Yuga, the first year named *Citrabhānu* gives auspicious results; the second year named *Subhānu* gives middling results; and the third year named *Nata* gives disease and death. In the fourth year named *Tāraṇa* there is much water, increase of grains, and increase of joy among kings; the fifth year named *Vyaya* is auspicious—in it there is the strength of desire and festivals (marriages and other auspicious rites). ‖ 35–36 ‖

Names and results of the five *Saṁvatsaras* within the fifth Yuga

Within the fifth (Tvaṣṭṛ) Yuga, the five *Saṁvatsaras* are *Sarvajit, Sarvadhārī, Virodhī, Vikṛta,* and *Khara*. Among these, the second (*Sarvadhārī*) is auspicious, and the rest (*Sarvajit, Virodhī, Vikṛta,* and *Khara*) are fear-giving. ‖ 37 ‖

Names and results of the five *Saṁvatsaras* within the sixth Yuga

In the sixth (Proṣṭhapada) Yuga the five *Saṁvatsaras* are *Nandana, Vijaya, Jaya, Manmatha,* and *Durmukha*. Among these, the first three (*Nandana, Vijaya,* and *Jaya*) are auspicious; *Manmatha* is middling; and the remaining (*Durmukha*) is inauspicious. ‖ 38 ‖

Names and results of the five *Saṁvatsaras* within the seventh Yuga

In the seventh (Pitṛ-related) Yuga the five *Saṁvatsaras* are *Hemalamba, Vilambī, Vikārī, Śarvarī,* and *Plava*. Among these, in the first (*Hemalamba*) year, there is mostly the fear of the six calamities including excessive rain, and rain accompanied by the great onrush of wind. In

the second (*Vilambī*) year there is little grain and much rain. The third *Saṁvatsara* causes great agitation (fault) and gives much water. The fourth (*Śarvarī*) *Saṁvatsara* produces famine. The fifth (*Plava*) *Saṁvatsara* gives auspicious results and much rain. ‖ 39–40 ‖

Names and results of the five *Saṁvatsaras* within the eighth Yuga

In the eighth (Vaiśva) Yuga the five *Saṁvatsaras* are *Śokahṛt, Śubhakṛt, Krodhī, Viśvāvasu,* and *Parābhava*. Among these, the first (*Śokahṛt*) and the second (*Śubhakṛt*) *Saṁvatsaras* give joy to the people. The third (*Krodhī*) *Saṁvatsara* is very inauspicious. The last two, the fourth (*Viśvāvasu*) and the fifth (*Parābhava*), give middling results; however, in the *Parābhava Saṁvatsara* there is fear from fire, affliction from weapons, affliction from disease, and fear to Brāhmaṇas and cows. ‖ 41–42 ‖

Names and results of the five *Saṁvatsaras* within the ninth Yuga

In the ninth (Saumya) Yuga the five *Saṁvatsaras* are *Pravaṅga, Kīlaka, Saumya, Sādhāraṇa,* and *Rodhakṛt*. Among these, the *Saṁvatsaras* named *Kīlaka* and *Saumya* are bestower of auspiciousness. In the *Pravaṅga Saṁvatsara* the people suffer. In the *Sādhāraṇa Saṁvatsara* there is little water and fear of calamities such as drought. In the *Rodhakṛt Saṁvatsara* there is variegated rain (raining in some places and not in others) and production of grain. ‖ 43–44 ‖

Names and results of the five *Saṁvatsaras* within the tenth Yuga

In the tenth (Śakrāgni) Yuga the five *Saṁvatsaras* are *Paridhāvī, Pramādī, Vikrama, Rākṣasa,* and *Anala*. In the *Paridhāvī Saṁvatsara* there is destruction of the Madhyadeśa, death of the king, little rain, and fear of fire. In the *Pramādī Saṁvatsara* lazy men, *ḍamara* (armed conflict), and trees with red flowers and red seeds are destroyed. In the *Vikrama Saṁvatsara* all men have joy. In the *Rākṣasa* and *Anala Saṁvatsaras* there is destruction of all people; but in the *Rākṣasa Saṁvatsara* there is production of summer grains (barley, wheat, chickpea, etc.), and in the *Anala Saṁvatsara* there is wrath of fire and pestilence. ‖ 45–47 ‖

Names and results of the five *Saṁvatsaras* within the eleventh Yuga

In the eleventh (Āśvina) Yuga the five *Saṁvatsaras* are *Piṅgala, Kālayukta, Siddhārtha, Raudra,* and *Durmati*. Among these, in the first (*Piṅgala*) *Saṁvatsara* there is excessive rain, fear of thieves, and a cough that shakes the breath and the chin. In the *Kālayukta Saṁvatsara* there are many results. In the *Siddhārtha Saṁvatsara* there are many excellences (prosperities). In the *Raudra Saṁvatsara* there are exceedingly inauspicious results and destruction of the people. In the *Durmati Saṁvatsara* there is moderate rain. ‖ 58–59 ‖

Names and results of the five *Saṁvatsaras* within the twelfth Yuga

In the twelfth (Bhāgya) Yuga, in the first *Saṁvatsara* named *Dundubhi* there is great increase of grain. In the second *Aṅgāra Saṁvatsara* there is destruction of kings and extremely fearful rain. In the third *Raktākṣa Saṁvatsara* there is fear from tusked animals (boars, etc.) and disease. In the fourth *Krodha Saṁvatsara* people become very wrathful. ‖ 50–51 ‖

Name and result of the fifth year within the twelfth Yuga

The last *Saṁvatsara* of the twelfth Yuga, named *Kṣaya*, destroys people in many ways, gives fear to Brāhmaṇas, and causes increase of farmers, Vaiśyas, Śūdras, and those who seize

others' wealth. The results of the sixty years that are described in other śāstras I (Varāhamihira) have stated here in brief in the *Bṛhaspati-cāra-adhyāya*.

यहाँ पर समाससंहिता में**— (Here, in the Samāsa-Saṁhitā)**

Marks and result of Jupiter's disk

Jupiter, possessing pure rays, having tangled (many-rayed) light, a vast disk, lustre like the *kumuda* flower, *kunda* flower, or crystal gem; unconquered in planetary war and moving on the good path (the northern course of the planets and Nakṣatras)—such a Jupiter is beneficial to men. ॥ 53 ॥

Chapter - 9

अथ शुक्रचाराध्याय**: (Atha Shukra Chara Adhyaya – Now, the Chapter on the Course of Venus)**

Venus has nine *vīthis* (tracks), three paths, and six circles. Among them, according to differing opinions, first the Nakshatras of the *vīthis* are stated—

In sets of three Nakshatras beginning with Ashvini, there are, in order, the nine *vīthis*: Nāga, Gaja, Airāvata, Vrisha, Go, Jaradrava, Mriga, Aja, and Dahana. Thus, in Ashvini, Bharani, and Krittika is the Nāga *vīthi*; in Rohini, Mrigashira, and Ardra the Gaja *vīthi*; in Punarvasu, Pushya, and Ashlesha the Airāvata *vīthi*; in Magha, Purva Phalguni, and Uttara Phalguni the Vrisha *vīthi*; in Hasta, Chitra, and Swati the Go *vīthi*; in Vishakha, Anuradha, and Jyeshtha the Jaradrava *vīthi*; in Mula, Purvashada, and Uttarashada the Mriga *vīthi*; in Shravana, Dhanishtha, and Shatabhisha the Aja *vīthi*; and in Purva Bhadrapada, Uttara Bhadrapada, and Revati the Dahana *vīthi*.

Sphutartha Chakra—

Table on Page 80

The Nakshatras of the *vīthis* according to our own view—

According to our own view, the divisions of Nakshatras in the *vīthis* are: in Swati, Bharani, and Krittika the Nāga *vīthi*; in Rohini, Mrigashira, and Ardra the Gaja *vīthi*; in Punarvasu, Pushya, and Ashlesha the Airāvata *vīthi*; in Magha, Purva Phalguni, and Uttara Phalguni the Vrisha *vīthi*; in the four Nakshatras Ashvini, Revati, Purva Bhadrapada, and Uttara Bhadrapada the Go *vīthi*; in Shravana, Dhanishtha, and Shatabhisha the Jaradrava *vīthi*; in Anuradha, Jyeshtha, and Mula the Mriga *vīthi*; in Hasta, Vishakha, and Chitra the Aja *vīthi*; and in the two Nakshatras Purvashada and Uttarashada the Dahana *vīthi*.

Division of paths within the aforesaid *vīthis*—

The three *vīthis* beginning with Nāga are situated, in order, in the northern, middle, and southern paths. That is: Nāga, Gaja, and Airāvata are in the northern path; Vrisha, Go, and Jaradrava in the middle path; and Mriga, Aja, and Dahana in the southern path. Within these sets of three *vīthis* also, one-by-one they are situated, in order, in the northern, middle, and

southern paths. Thus, Nāga is in the northern path, Gaja in the northern–middle path, Airāvata in the northern–southern path; Vrisha in the middle–northern path, Go in the middle–middle path, Jaradrava in the middle–southern path; Mriga in the southern–northern path, Aja in the southern–middle path, and Dahana in the southern–southern path.

In the Samāsa Saṁhitā—

Conception of the paths according to differing opinions—

According to some, in the Nakshatra-path, just as the *vīthi* paths are situated, in the same way the southern, northern, and middle paths should be conceived. That is: the group of Yogatārā stars situated to the south of the Nakshatra-path are in the southern path; those to the north are in the northern path; and those in the middle are in the middle path. Or, a planet situated south of the Nakshatra-path moves in the southern path; to the north, in the northern path; and in the middle, in the middle path.

Here, Kaśyapa—

Conception of the paths according to differing opinions—

According to some, the nine Nakshatras beginning with Bharani (Bharani, Krittika, Rohini, Mrigashira, Ardra, Punarvasu, Pushya, Ashlesha, and Magha) are situated in the northern path; the nine Nakshatras beginning with Purva Phalguni (Purva Phalguni, Uttara Phalguni, Hasta, Chitra, Swati, Vishakha, Anuradha, Jyeshtha, and Mula) in the middle path; and the nine Nakshatras beginning with Purvashada (Purvashada, Uttarashada, Shravana, Dhanishtha, Shatabhisha, Purva Bhadrapada, Uttara Bhadrapada, Revati, and Ashvini) in the southern path.

Here, Garga—

Reason for stating differing opinions—

Jyotisha-śāstra is an *āgama*-śāstra; without tradition it cannot be known. Therefore, to doubt within it (saying, “is this correct or not,” etc.) is not proper for us. For all ṛṣis were seers of the three times; one cannot say what sort of *āgama* each ṛṣi had. Therefore, since all are to be honored by us, I collect the opinions of many and state them here. ॥ 7 ॥

Result of Venus situated in the northern etc. *vīthis*—

If Venus rises or sets while situated in a northern *vīthi*, he causes abundance and auspiciousness; in a middle *vīthi*, he gives middling result; and in a southern *vīthi*, he gives distress.

Here, Garga—

Special results of the *vīthis*—

In the nine *vīthis* beginning with Nāga, the results, in order, are: exceedingly excellent, excellent, less (somewhat diminished auspiciousness), even, middling, slight (a little auspicious), inferior, distress, and most distress. That is: exceedingly excellent in the Nāga *vīthi*; excellent in the Gaja *vīthi*; less in the Airāvata *vīthi*; even in the Vrisha *vīthi*; middling in the Go *vīthi*; slight in the Jaradrava *vīthi*; inferior in the Mriga *vīthi*; distress in the Aja *vīthi*; and most distress in the Dahana *vīthi*. ॥ 9 ॥

Of Venus's six circles, the mark and result of the first circle—
From Bharani spanning four Nakshatras (Bharani, Krittika, Rohini, and Mrigashira) is the first circle. If Venus rises or sets in this circle, there is abundance in the world, and fear in the countries of Anga, Vaṅga, Mahisha, Bāhṛīka, and Kaliṅga. If, in the first circle, above the risen Venus there is any planet, the kings of the countries Bhadrāśva, Shūrasenaka, Yaudheyaka, and Koṭivarṣa perish. ॥ 10–11 ॥

Mark and result of the second circle—
From Ardra spanning four Nakshatras (Ardra, Punarvasu, Pushya, and Ashlesha) is the second circle. If Venus rises or sets in this circle, there is much rain and special production of grains. But it is inauspicious for Brāhmaṇas, and especially inauspicious for the wicked. If in this circle Venus, having risen, is afflicted by any other planet, then injustice touches all these: Mleccha men, forest-dwellers, those whose livelihood is by dogs, cow-keepers, Gonarda (those dwelling at Chidambaram, the birthplace of Patañjali), those doing base deeds, Śūdras, and those dwelling in the country of Videha (Mithilā); (they all become afflicted by troubles). ॥ 12–13 ॥

Mark and result of the third circle—
From Magha spanning five Nakshatras (Magha, Purva Phalguni, Uttara Phalguni, Hasta, and Chitra) is the third circle. In this, Venus rising becomes a destroyer of grain, producing famine and fear of thieves, promoting those who do base deeds, and producing mixture of castes. If Venus situated in this circle is afflicted by another planet, he destroys trees, Śabaras, Śūdras, Pauṇḍras, the western Śulika country and forest-dwellers, the Dravida, and those dwelling on the sea-shore. ॥ 14–15 ॥

Mark and result of the fourth circle—
From Swati spanning three Nakshatras (Swati, Vishakha, and Anuradha) is the fourth circle. If Venus rises or sets in this, he brings abundance and prosperity for Brāhmaṇas and Kṣatriyas, but produces mutual enmity among friends. If Venus situated in this circle is afflicted by any other planet, there is death of the lord of the Kirātas, and destruction of those dwelling among the Ikṣvāku lineage, the frontier (Mleccha country), Avanti, Pulinda, Taṅgaṇa, and Shūrasena. ॥ 16–17 ॥

Mark and result of the fifth circle—
From Jyeshtha spanning five Nakshatras (Jyeshtha, Mula, Purvashada, Uttarashada, and Shravana) is the fifth circle. If Venus rises or sets in this, there is famine, and fear from thieves and disease; and he afflicts the inhabitants of Kashmir, Aśmaka, Matsya, the bank of the Charudevi river, and Avanti. If Venus situated in this circle is afflicted by any other planet, he destroys the inhabitants of Dravida, Ābhīra (Śabara), Ambaṣṭha, Trigarta, Saurāṣṭra, Sindhu, and Sauvīraka countries, and the king of Kāśi. ॥ 18–19 ॥

Mark and result of the sixth circle—
From Dhanishtha spanning six Nakshatras (Dhanishtha, Shatabhisha, Purva Bhadrapada, Uttara Bhadrapada, Revati, and Ashvini) is the sixth circle. If Venus rises or sets in this, it is auspicious; the earth is filled with much wealth, cows, and grains; however, in some places there remains a measure of fear. If in this circle Venus is afflicted by any planet, the people

situated in the countries of Śulika, Gandhāra, and Avanti are afflicted; the people situated in the country of Videha die; and there is increase of cave-dwellers, Yavanas, Śakas, and slaves. ॥ 20–21 ॥

Special result of the circles—
Among the aforesaid circles, the circles beginning with Swati (the fourth) and with Jyeshtha (the fifth) produce auspiciousness in the western direction. The circle beginning with Magha (the third) produces auspiciousness in the eastern direction. The remaining three circles (the first, second, and sixth) are to be understood as giving the results as stated.

In the Samāsa Saṁhitā—

Special results of Venus seen by day—
If Venus is seen before sunset, he produces fear; if seen throughout the day, he produces famine and disease; and if seen at midday together with the Moon, he produces dissension among the king, the army, and the city.

Here, Parāśara—
Result when Venus pierces Krittika Nakshatra—
If Venus moves while piercing Krittika Nakshatra, then by the rivers that cut banks and hold water, uneven tracts disappear and the earth becomes level—that is, the earth becomes filled by the flood of the river. ॥ 24 ॥

Result when piercing the Rohiṇī-cart—
If Venus moves while piercing the Rohiṇī-cart, then, becoming sinful (like one who has committed Brahma-murder), the earth—mottled with hair and bone-fragments—assumes the vow like a *Kāpālika*. Just as those who have committed Brahma-murder, for pacification of sin according to Manu-smṛti and the like, take hair and bone-fragments and assume the *Kāpālika* vow, in the same way, being filled with hair and bone-fragments, the earth assumes a vow like a *Kāpālika*—that is, there is excessive death upon the earth.

In the Brahma-siddhānta—

Result when Venus pierces the Mṛgaśīrṣa and Ārdrā Nakṣatras—
If Venus comes into Mṛgaśīrṣa Nakṣatra, he destroys juices (sweet, etc.) and grains. If he comes into Ārdrā Nakṣatra, he destroys the Kośala and Kaliṅga countries and produces excessive rain. ॥ 26 ॥

Result when Venus is situated in Punarvasu and Puṣya Nakṣatras—
If Venus is situated in Punarvasu Nakṣatra, there is calamity (disturbance) in the Aśmaka and Vidarbha countries. If Venus is situated in Puṣya Nakṣatra, there is excessive rain and a clash in the wars of the Vidyādharas. ॥ 27 ॥

Result when Venus is situated in Āśleṣā and Maghā Nakṣatras—
Venus moving in Āśleṣā Nakṣatra greatly afflicts people with serpents. And Venus, while piercing Maghā Nakṣatra, afflicts the lord of elephants and produces excessive rain.

Here are the pierce-marks according to the mathematicians—

Result when Venus, piercing, goes through Pūrvā-Phālgunī and Uttarā-Phālgunī Nakṣatras—
Venus, piercing Pūrvā-Phālgunī Nakṣatra, destroys the Śabara and Pulinda peoples and produces excessive rain. Venus, piercing Uttarā-Phālgunī Nakṣatra, destroys those dwelling in the Kuru country, those dwelling in the Jāṅgala (places with little water), and birds and seeds, and produces rain. ॥ 29 ॥

Result when Venus is situated in Hasta and Citrā—
Venus situated in Hasta Nakṣatra afflicts the Kauravas and painters and produces drought; and Venus situated in Citrā Nakṣatra afflicts well-diggers and birds and produces beautiful rain. ॥ 30 ॥

Result when Venus is situated in Svāti and Viśākhā—
Venus situated in Svāti Nakṣatra produces excessive rain and spreads disturbances among messengers, merchants, and boatmen. Venus situated in Viśākhā Nakṣatra produces beautiful rain and afflicts those engaged in commerce. ॥ 31 ॥

Result when Venus is situated in Anurādhā, Jyeṣṭhā, and Mūla—
Venus situated in Anurādhā Nakṣatra causes enmity among kṣatriyas; in Jyeṣṭhā, he destroys the chief among kṣatriyas; and Venus situated in Mūla destroys eminent physicians; and in these three Nakṣatras, for as long as Venus remains seated, he produces drought. ॥ 32 ॥

Result when Venus is situated in Pūrvāṣāḍhā, Uttarāṣāḍhā, Śravaṇa, and Dhaniṣṭhā—
Venus situated in Pūrvāṣāḍhā afflicts creatures born in water; in Uttarāṣāḍhā, he produces the arising of diseases; in Śravaṇa, ear-pain; and Venus situated in Dhaniṣṭhā produces fear among sectarians (Veda-deniers). ॥ 33 ॥

Result when Venus is situated in Śatabhiṣā and Pūrvabhādrapadā—
Venus situated in Śatabhiṣā afflicts the wine-sellers (*śauṇḍika*, i.e., *kalavāras*). Venus situated in Pūrvabhādrapadā afflicts gamblers and those dwelling in the Kuru and Pañjāb countries, and produces rain. ॥ 34 ॥

Result when Venus is situated in Uttarabhādrapadā, Revatī, Aśvinī, and Bharaṇī—
Venus situated in Uttarabhādrapadā afflicts fruits and roots; in Revatī, travelers; in Aśvinī, horse-keepers; and Venus situated in Bharaṇī afflicts Kirātas and Yavanas.

Here, Kaśyapa—
Result of Venus's rising/setting on the tithis Kṛṣṇa Caturdaśī, Amāvāsyā, and Aṣṭamī—
If Venus rises or sets on the tithis of the dark fortnight's fourteenth (Kṛṣṇa Caturdaśī), the Amāvāsyā, or the dark eighth (Kṛṣṇa Aṣṭamī), the earth becomes filled with water.

Here, Parāśara—
Result when Jupiter and Venus are mutually in the seventh sign—

If Jupiter and Venus are placed mutually in the seventh sign from each other, the people are afflicted by disease and many kinds of fear, and there is drought.

And Garga—

Result when planets are placed ahead of Venus—

If ahead of Venus there are Jupiter, Mercury, Mars, and Saturn, there are wars among men, Nāgas, and Vidyādharas; by fearful winds trees, etc., are destroyed; among friends there is lack of mutual friendship; among Brāhmaṇas, lack of ritual; complete lack of rain; and by thunderbolts mountains are destroyed. ॥ 38–39 ॥

Result when only Saturn is placed ahead of Venus—

If Saturn moves ahead of Venus, the Mleccha race, cats, elephants, asses, buffaloes, black grains, swine, Niṣādas, Śūdras, and the people situated in the southern direction are destroyed by eye-disease and disorders of wind. ॥ 40 ॥

Result when Mars is placed ahead of Venus—

If Mars moves ahead of Venus, the people are destroyed by fire, weapons, hunger, drought, and thieves; the moving and non-moving creatures situated in the northern direction are destroyed; and the quarters are destroyed by fire, lightning, and dust. ॥ 41 ॥

Result when Jupiter is placed ahead of Venus—

If Jupiter moves ahead of Venus, he destroys white things, Brāhmaṇas, cows, and the abodes of the gods, and the eastern direction; there is a shower of hail from clouds; people have diseases of the throat; and autumnal grain increases. ॥ 42 ॥

Result when Mercury is placed ahead of Venus—

If Mercury moves ahead of Venus, there is rain, arising of bilious and jaundice diseases among people, and he strengthens grains produced in summer; and he destroys forest-dwellers, Agnihotris, physicians, warriors, horses, Vaiśyas, cows, vehicles, the king, all yellow objects, and the western direction. ॥ 43 ॥

Mark and result of Venus's color—

If Venus's color is like fire, there is fear from fire; if red, wrath of weapons; if like the streak of gold rubbed on a touchstone, disease; if like a parrot or yellow, there arises asthma and cough diseases; and if like ash—dry—or black in color, there is drought. ॥ 44 ॥

Further mark and result of Venus's color—

If Venus has lustre like curds, the *kumuda* flower, or the Moon; has clear and widespread rays; a vast form; beautiful motion (not retrograde); is free from defect; and is victorious—he makes the people like in the Kṛta Yuga (free from disease, poverty, and sorrow).

Chapter – 10

अथ शनैश्चरचाराध्यायः **(Atha Śanaiścara-cāra-adhyāyaḥ — Now, the Chapter on the Course of Saturn)**

Brief result of Saturn situated in the Nakṣatras—
If Saturn, situated in Śravaṇa, Svāti, Hasta, Ārdrā, Bharaṇī, or Pūrvā-Phālgunī Nakṣatra, has a clear form, the earth becomes filled with the water of rain.

If he is situated in Āśleṣā, Śatabhiṣā, or Jyeṣṭhā Nakṣatra, there are beautiful fields and slight rain. If he is situated in Mūla, there is famine, war, and lack of rain. Having thus briefly stated the results, the results for each Nakṣatra are told.

Here, Garga—
Result of Saturn situated in Aśvinī and Bharaṇī Nakṣatras—
If Saturn is situated in Aśvinī Nakṣatra, he destroys horses, those who treat horses, poets, physicians, and ministers. If he is situated in Bharaṇī Nakṣatra, he destroys dancers, instrumentalists, singers, those who walk on unjust paths, and Niṣādas. ॥ 3 ॥

Result of Saturn situated in Kṛttikā and Rohiṇī Nakṣatras—
If Saturn is seated in Kṛttikā Nakṣatra, he destroys those whose livelihood is by fire and the commander of the army. If Saturn is situated in Rohiṇī Nakṣatra, he destroys people dwelling in the Kośala, Madra, Kāśī, and Pāñcāla countries, and those whose livelihood is by cart. ॥ 4 ॥

Result of Saturn situated in Mṛgaśīrṣa and Ārdrā Nakṣatras—
If Saturn is situated in Mṛgaśīrṣa Nakṣatra, he afflicts the people dwelling in the Vatsa country, sacrificers (priests), patrons of sacrifice, principal men, and the Madhyadeśa. If Saturn is situated in Ārdrā, he afflicts those dwelling in the Pārata country, those dwelling in Madra country, oil-pressers, washers/dyers (launderers, dyers), and thieves. ॥ 5 ॥

Result of Saturn situated in Punarvasu and Puṣya Nakṣatras—
If Saturn is situated in Punarvasu Nakṣatra, he afflicts all these: those in Pañjāb, Gudda, Saurāṣṭra, near the Sindhu, and in the Sauvīra country. If Saturn is situated in Puṣya Nakṣatra, he afflicts the bell-ringers (*ghoṣika*, town-criers or those dwelling in echoing caves), Yavanas, merchants, Kirātas, rogues, and the Puṣyas. ॥ 6 ॥

Result of Saturn situated in Āśleṣā and Maghā Nakṣatras—
If Saturn is seated in Āśleṣā Nakṣatra, he afflicts creatures born in water and serpents. If Saturn is seated in Maghā Nakṣatra, he afflicts the people dwelling in the Bāhṛīka, China, Gandhāra, Śūlika, and Pārata countries; Vaiśyas; storehouses; merchants; and Kirātas.

Here, Garga—
Saturn situated in Pūrvāphālgunī Nakṣatra afflicts sellers of tastes (sweet, sour, salty, bitter, pungent, and astringent), courtesans, maidens, and those dwelling in the Mahārāṣṭra country—all these. Saturn situated in Uttarāphālgunī Nakṣatra afflicts the king, jaggery, salt, beggars, water, and the city of Takṣaśilā. ॥ 8 ॥

Result of Saturn situated in Hasta Nakṣatra—
Saturn situated in Hasta Nakṣatra afflicts barbers, *cakrika* (potters, oilmen, etc.), thieves, physicians, artisans, elephant-catchers, courtesans, those dwelling in the Kośala country, and gardeners—all these. ॥ 9 ॥

Result of Saturn situated in Citrā and Svātī Nakṣatras—
If Saturn is situated in Citrā Nakṣatra, he afflicts women, scribes, painters, and *bhāṇḍa* (the wealth of various merchants = "*bhāṇḍaṃ vaṇig-mūladhane bhūṣāśva-bhūṣayor*" as in the Medinī)—all these. If Saturn is situated in Svātī Nakṣatra, he afflicts *Māgadha* (those who sing fame, or those dwelling in the Magadha country), spies, messengers, charioteers, those who go by boat, actors, etc.—all these. ॥ 10 ॥

Result of Saturn situated in Viśākhā—
If Saturn sits in Viśākhā Nakṣatra, he destroys the people dwelling in the Trigarta, China, and Kulūta countries, and saffron, lac, grains, madder, and the flowers of safflower. ॥ 11 ॥

Result of Saturn situated in Anurādhā—
If Saturn is situated in Anurādhā Nakṣatra, he afflicts the people in the countries of Kulūta, Taṅgaṇa, Khasa (Nepal), and Kāśmīra; ministers and *cakracara* (potters, oilmen, etc.); bell-ringers; and artisans; and he produces mutual dissension among friends. ॥ 12 ॥

Result of Saturn situated in Jyeṣṭhā and Mūla Nakṣatras—
Saturn situated in Jyeṣṭhā Nakṣatra afflicts the king, the priest, those honored by kings, heroes, *gaṇa* (monastic establishments of renouncers), principal families, and transgressors of people. Saturn situated in Mūla afflicts the people dwelling in Kāśī, Kośala, and Pañjāb, fruits, medicines, and those who wage war. ॥ 13 ॥

Result of Saturn situated in Pūrvāṣāḍhā Nakṣatra—
Saturn situated in Pūrvāṣāḍhā afflicts those dwelling in the countries of Aṅga, Vaṅga, Kośala, Girivraja, Magadha, Puṇḍra, Mithilā, and Tāmraliptī. ॥ 14 ॥

Result of Saturn situated in Uttarāṣāḍhā Nakṣatra—
Saturn situated in Uttarāṣāḍhā afflicts those dwelling in the Daśārṇa country, Yavanas, the country of Ujjayinī, the Śabara class, those dwelling on the Pāriyātra (mountain), and those in the Kuntibhoja country. ॥ 15 ॥

Result of Saturn situated in Śravaṇā and Dhaniṣṭhā—
Saturn situated in Śravaṇā Nakṣatra afflicts the king's officers, principal Brāhmaṇas, physicians, and priests. If Saturn is situated in Dhaniṣṭhā Nakṣatra, then there is victory of the lord of Magadha, and increase of the treasurer. ॥ 16 ॥

Result of Saturn situated in Śatabhiṣā, Pūrvābhādrapadā, and Uttarābhādrapadā Nakṣatras—
If Saturn is situated in Śatabhiṣā or Pūrvābhādrapadā Nakṣatra, physicians, poets, *śauṇḍika* (sellers of wine), buyers and sellers, and those who know political science are afflicted. If Saturn

sits in Uttarābhādrapadā, he destroys those dwelling on riverbanks, chariot-officers, artisans, women, and gold. ॥ 17 ॥

Result of Saturn situated in Revatī Nakṣatra—
If Saturn sits in Revatī Nakṣatra, those dwelling under the protection of the king, those dwelling in the Kraunca-dvīpa, autumnal grain, the Śabara class, and Yavanas are afflicted. ॥ 18 ॥

Result when Jupiter is in Viśākhā, Saturn in Kṛttikā, and when both planets are in one Nakṣatra—
When Jupiter sits in Viśākhā Nakṣatra and Saturn sits in Kṛttikā Nakṣatra, then at that time terrible injustice arises among the people. And when both sit in one Nakṣatra, then at that time mutual enmity arises among the cities.

Here, Parāśara—
Mark and result of Saturn's color—
If Saturn's color is of many hues, there is destruction of birds; if yellow, famine; if red, war; and if like ash or similar, there is mutual enmity among the people.

Parāśara (again)—
Further mark of color and its result—
If Saturn's color is pure like the cat's-eye gem (*vaidūrya-maṇi*), he becomes beneficial to the people. If like an arrow or the *atasi* flower—black—then also it is auspicious. And the class whose kind of color Saturn assumes, he destroys men of that corresponding color: thus, if of white color, he destroys Brāhmaṇas; if of red color, Kṣatriyas; if of yellow color, Vaiśyas; and if of black color, Śūdras. Thus is the word of the ancient sages.

Chapter - 11

अथ केतुचाराध्याय**: (Atha Ketu-cāra-adhyāya – Now, the Chapter on the Course of Ketu)**

Having examined the courses of Ketu composed also by Garga, Parāśara, Asita, Devala, and other ācāryas, this unconfused (free from doubt) course of Ketu is stated. ॥ 1 ॥

Mark of the rising and setting of Ketu—
By calculation one cannot know the setting or rising of Ketu, because there are three kinds of Ketu: divine (arising in the sky), atmospheric (arising in a place different from the positions of planets and Nakṣatras), and terrestrial (arising on the earth). Therefore, being of the nature of portents, his rising and setting cannot be known by mathematics. ॥ 2 ॥

Mark of Ketu other than the divine—
Leaving fireflies, the abode of Piśācas (the place of Yakṣas), gems (such as moonstone), jewels (such as emerald), glass, etc.—in whatever place, different from fire, a form like fire is seen, there one should understand the form of Ketu. ॥ 3 ॥

Mark of the divine, atmospheric, and terrestrial Ketu—
The Ketu whose appearance is in banners, weapons, houses, trees, horses, elephants, etc., is atmospheric; among the Nakṣatras, it is divine; and in places different from these it is terrestrial Ketu. ॥ 4 ॥

According to differing opinions, the number of Ketus—
Some say one hundred and one; others, one thousand; and Nārada Muni says that there is only one Ketu of many forms.

Here, Garga—
Having stated differing opinions, his own conclusion—
Whether there be one or many Ketus has no use for me. But by (noting) the rising, setting, his place, contact (with planet or Nakṣatra), and *ādhūmana* (the smokiness—white, red, yellow, black colors), I only have to state the result. ॥ 6 ॥

Determination of result from the sighting of Ketu—
For as many days as Ketu is seen, counting from forty-five days after its setting, for that many months; and for as many months as it is seen, counting from forty-five days after its setting, for that many years—it gives result.

In the Samāsa Saṁhitā—

Mark of an auspicious Ketu
If small, thin, clear, glossy, straight, vanishing in only a few days, white, and if there be rain at the time of rising—such a Ketu gives abundance and happiness. ॥ 8 ॥

Mark of an inauspicious Ketu and its result—
Ketus with marks different from the aforesaid are not auspicious. And Ketus of the form of a rainbow, or with two or three tufts, especially give inauspicious results.

In the Samāsa Saṁhitā—

Mark and result of the twenty-five Ketus, sons of the Sun
Ketus possessing tufts and of color like a pearl-necklace, gem (moonstone, etc.), or gold are of twenty-five kinds. These Ketus, sons of the Sun, are seen toward the east and west. If even one of these is seen, mutual enmity arises among kings.

Mark and result of the twenty-five Ketus, sons of Fire
Ketus of twenty-five kinds, sons of Fire, are of color like parrot, fire, *bandhujīvaka* (black-flowered), lac, or blood; these are seen in the south-east (Agni-corner). On their being seen there is fear from fire.

Mark and result of the twenty-five Ketus, sons of Yama
Ketus, sons of Yama, of twenty-five kinds, with crooked tufts, rough, and black—these arise in the southern direction. On their being seen, there is death fallen upon the earth.

Here, Garga—

Mark and result of the twenty-two Ketus, sons of Earth

Circular, like a mirror, tuft-less, endowed with rays, like water and oil—these are the twenty-two Ketus, sons of Earth. These arise in the north-east (Īśāna corner). On their being seen, there is famine.

Mark and result of the three Ketus, sons of the Moon

Three kinds of Ketus, sons of the Moon, are of color like moon-rays, silver, snow, or the *kumuda* or *kunda* flower. These arise in the northern direction. On their being seen, there is abundance.

Mark and result of the Ketu named Brahmadaṇḍa

There is one Ketu, son of Brahmā, with three tufts and endowed with three colors; this rises in all directions, and when there is its sighting, there is destruction of all regions.

Here Garga Rishi-

By saying "one hundred and one Ketu," also 899 (eight hundred ninety-nine) are stated—

Thus, having stated the marks of the one hundred and one Ketus, then the clear marks of eight hundred ninety-nine kinds of them are stated. ॥ 16 ॥

Eighty-four kinds of Venus-son Ketus: marks and results—

There are eighty-four kinds of Venus-son Ketus having expansive, white, and clear bodies. These rise in the north and the northeast corners, and upon their sighting there is sharp (inauspicious) result.

Sixty kinds of Saturn-son Ketus: marks and results—

There are sixty kinds of Saturn's sons, Ketus that are clear, endowed with lustre, and having two tufts. These are called Kanaka-designated and rise in all directions. Upon their sighting there are very inauspicious results.

Sixty-five kinds of Jupiter-son Ketus: marks and results—

There are sixty-five kinds of Jupiter-son Ketus that are white, with one star, tuft-less, and having clear bodies; these are called Vikacha-designated and rise in the southern direction; upon their sighting, sinful (inauspicious) results occur.

Fifty Mercury-son Ketus: marks and results—

There are fifty Ketus, sons of Mercury, that are indistinct, of subtle body, long, white, rising in all directions, designated by name; upon their sighting there is inauspicious result.

Sixty kinds of Mars-son Ketus: marks and results—

There are sixty kinds of Mars-son Ketus, with lustre like blood or fire, having three tufts and three stars; these rise in the northern direction; upon their sighting there is inauspicious result.

Thirty-three kinds of Rahu-son Ketus: marks and results—
Rahu's sons, called Tāmasa and Kīlaka, are thirty-three kinds of Ketus; these are seen in the Sun and Moon disks. Their result has been stated in the chapter on the Course of the Sun in the passage beginning "the Rahu-sons named Tāmasa and Kīlaka, the Ketus," etc.

यहाँ पराशर -
One hundred twenty Fire-son Ketus: marks and results—
There are one hundred twenty kinds of Fire's sons, Ketus with exceedingly blazing forms; these are called Viśvarūpa-designated and give very terrible fear from fire.

Seventy-seven Wind-son Ketus—
There are seventy-seven Wind-son Ketus, bearing dark color with reddish tint, devoid of stars, like a *chamara*, with expansive rays and rough; these are called Aruṇa-designated and give sinful results.

Eight sons of Prajāpati and one hundred four sons of Brahmā: marks and results—
There are eight kinds of Ketus, sons of Prajāpati, like a cluster of stars; these are called Gaṇaka-designated and give inauspicious results. And the one hundred four Ketus, sons of Brahmā, quadrangular in shape and called Caturasra-designated, also give inauspicious results. Both these Ketus rise in all directions.

Thirty-two kinds of Varuṇa-son Ketus: marks and results—
There are thirty-two kinds of Ketus, sons of Varuṇa, with forms like bamboo and bush (creeper), called Kaṅka-designated and with lustre like the Moon. These rise in all directions, and upon their sighting there is inauspicious result.

Ninety-six kinds of Time-son Ketus: marks and results—
There are ninety-six kinds of Ketus, sons of Time, called Kabandha-designated, with forms like a man with severed head and with indistinct rays. These rise in all directions, and upon their sighting there is auspicious result in the Puṇḍra country and inauspicious in other countries.

Nine kinds of Vidishā-son Ketus: marks and results—
There are nine kinds of Ketus, sons of Vidishā, white in color, expansive, and with one star. These arise in Vidishā, and upon their sighting there is inauspicious result. In this way there are one thousand Ketus; their special characteristics are stated further.

Seen-Ketu: marks and results—
A Ketu named Vasa is expanded toward the north, thick, clear, and rises in the western direction. From the time of its rising, deaths fall upon the earth, and there is excellent abundance. ॥ 29 ॥

Bone-Ketu and Weapon-Ketu: marks and results—
Like the aforesaid Vasa-Ketu, accompanied by marks such as *udgāyitā* etc., and rough, is the Bone-Ketu. He causes famine. And endowed with the marks of Vasa-Ketu, clear, and rising in the eastern direction, is the Weapon-Ketu; he brings on warfare by weapons and the killing of men. ॥ 30 ॥

Skull-Ketu: marks and results—
With rays of smoky color, rising in the east on Amāvāsyā, and moving in half the sky, is the Skull-Ketu. Upon its sighting, famine, pestilence, drought, and disease arise upon the earth. ॥ 31 ॥

Rudra-Ketu: marks and results—
Rising in the east and the southeast corner, with spear-point (three tufts), tawny, rough, or with rays like copper, and moving in three parts of the sky, is the Rudra-Ketu. He gives results like the Skull-Ketu.

Moving-Ketu: marks and results—
Rising in the western direction, having a tuft raised one finger toward the south, becoming longer as it goes to the north, touching the Seven Ṛṣis, the Pole-star, and Abhijit Nakshatra and returning, and going in half the sky to set in the southern direction—this is the Moving-Ketu. Upon its sighting, the countries from Prayāga up to Avanti, the place named Puṣkarāraṇya, and up to the Devikā river on the northern side are destroyed; and especially the Madhya-deśa is destroyed. And other countries also are destroyed by disease and famine. Its result lasts from the time of sighting up to ten months; and according to some, from the time of sighting up to eighteen months.

White-Ketu: marks and results—
The White-Ketu is seen in the east at midnight, with a south-situated tuft; and another, designated by name, has a form like the yoke of a cart and sets in the southwest direction. If, being clear, these both are seen for seven days, they produce abundance and welfare. If the Ketu named Kanāmaka is seen for more than seven days, he afflicts men by the wrath of weapons for ten years. ॥ 37–38 ॥

Śveta: marks and results—
The Ketu named Śveta is like matted hair, rough, tawny, and, going up to three parts of the sky, returns by the left side. Upon its sighting, one third of the people's realm remains—that is, two parts are destroyed. ॥ 39 ॥

Ray-Ketu: marks and results—
With a smoky-colored tuft and seen when situated in Kṛttikā Nakshatra is the Ray-Ketu. Upon its sighting, there is the result like that of Śveta (people remaining one-third). ॥ 40 ॥

Dhruva Ketu: marks and results—
With uncertain motion, measure, color, and form, seen in all directions, being of three kinds—divine, atmospheric, and terrestrial—clear and giving auspicious results, is the Dhruva Ketu. This Dhruva Ketu is seen in the army-equipment (horses, reins, etc.) of kings who are to be destroyed, in the houses, trees, and mountains of countries that are to be destroyed, and in the household implements of householders who are to be destroyed. ॥ 41–42 ॥

Kumuda-named Ketu: marks and results—
With lustre like the *kumuda* flower, rising in the western direction, with a tuft toward the east,

and seen for only one night, is the Kumuda Ketu. Upon its sighting, there is abundance on earth for ten years. ॥ 43 ॥

Gem-Ketu: marks and results—
Seen once in the remaining one *prahara* of the night in the western direction, and having a clear tuft like a stream of milk, is the Gem-Ketu. From the time of its rising it produces abundance for four and a half months, and mostly increases small creatures like mongooses, etc.

Water-Ketu: marks and results—
Seen in the western direction, clear, and with a tuft rising to the west, is the Water-Ketu. When it rises, for nine months it produces abundance and the welfare of people.

Bhava-Ketu: marks and results—
Seen in the eastern direction for only one night, endowed with a subtle star and with a right-turning tuft like the tail of a lion, is the Bhava Ketu. Being of clear form, for as many moments as it is seen, for that many months it produces abundance; and being of rough form, for as many moments as it is seen, for that many months it produces life-ending disease. ॥ 47–48 ॥

Padma-Ketu: marks and results—
Seen in the eastern direction for only one night, and fair like a lotus-stalk, is the Padma Ketu. When it rises, for seven years it produces abundance and joy-auspiciousness among people. ॥ 49 ॥

Āvarta-Ketu: marks and results—
Rising in the western direction at half-night, with a south-situated tuft, of red color, with clear body, is the Āvarta Ketu. For as many moments as it is seen, for that many months it produces abundance. ॥ 50 ॥

Saṁvarta Ketu: mark and result—
The Saṁvarta Ketu is one that, in the western direction at twilight, is seen going up to a third part of the sky, having three tufts of smoky or coppery color. For as many moments as it is seen, for that many years it destroys kings by war, and it afflicts the asterism present at the time of its rising.

Here, Garga—
Inauspicious result from contact and fumigation with asterisms by inauspicious Ketus—
Leaving aside the auspicious Ketus, when asterisms are fumigated or touched by other Ketus, the kings whose destruction occurs thereby are stated. ॥ 53 ॥

Result when asterisms from Aśvinī to Rohiṇī are fumigated or touched by Ketu—
If Aśvinī asterism is fumigated or touched by Ketu, it destroys the lord of the Aśmaka country; if

Bharanī, the lord of the Kirātas; if Kṛttikā, the lord of the Kaliṅga country; and if Rohiṇī, it destroys the lord of the Śūrasena country. ॥ 54 ॥

Result for asterisms from Mṛgaśīrṣa to Puṣya being fumigated or touched by Ketu—
If Mṛgaśīrṣa is fumigated or touched by Ketu, it destroys the lord of the Uśīnara country; if Ārdrā, the lord of the Matsya country; if Punarvasu, the lord of the Aśmaka country; and if Puṣya, it destroys the lord of Magadha. ॥ 55 ॥

Result for asterisms from Āśleṣā to Hasta being fumigated or touched by Ketu—
If Āśleṣā asterism is fumigated or touched by Ketu, Asikeśvara (the lord of Asika) is destroyed; if Maghā, the lord of the Aṅga country; if Pūrvāphālgunī, the lord of the Pāṇḍava country; if Uttarāphālgunī, the lord of Ujjayinī; and if Hasta asterism, the lord of the Daṇḍaka forest is destroyed. ॥ 56 ॥

Result for Citrā and Svātī being fumigated or touched by Ketu—
If Citrā asterism is fumigated or touched by Ketu, the knower of Ketu-afflictions should declare the death of the lord of Kurukṣetra. And if Svātī asterism, he should declare the destruction of the lords of Kāśmīra and Kamboja. ॥ 57 ॥

Result for asterisms from Viśākhā to Jyeṣṭhā being fumigated or touched by Ketu—
If Viśākhā asterism is fumigated or touched by Ketu, the lord of Alakā is destroyed; if Anurādhā, the lord of Puṇḍra; and if Jyeṣṭhā asterism, the universal monarch is destroyed. ॥ 58 ॥

Result for asterisms from Mūla to Uttarāṣāḍhā being fumigated or touched by Ketu—
If Mūla asterism is fumigated or touched by Ketu, the lords of the Andhra and Madraka countries are destroyed; if Pūrvāṣāḍhā, the lord of Kāśī; and if Uttarāṣāḍhā asterism, the lords of the Yaudheya, Arjunāyana, Śivi, and Chodya countries are destroyed. ॥ 59 ॥

Result for asterisms from Śravaṇa to Revatī being fumigated or touched by Ketu—
If Śravaṇa asterism is fumigated or touched by Ketu, the lord of the Kekaya country; if Dhaniṣṭhā, the lord of Pañjāb; if Śatabhiṣā, the lord of the Siṁhala country; if Pūrvabhādrapadā, the lord of Naimiśāraṇya; and if Revatī, the lord of the Kirātas is destroyed. ॥ 60 ॥

Special result of Ketu—
That Ketu which is struck by a meteor is auspicious-making. That which is accompanied by rain is exceedingly auspicious-making; and that very Ketu makes inauspicious those men dwelling in the countries of Cola, Avagāṇa, Sitahūṇa, and China. ॥ 61 ॥

Another special result of Ketu—
In the direction toward which the tuft of Ketu bends, in the direction in which it spreads, or the asterism which it touches—there the kings enjoy, just so, the villages conquered by excessive prowess and enjoyed by other enjoyers; as Garuḍa enjoys the limbs of the excellent serpents destroyed by divine power.

Chapter - 12

अथ अगस्त्यचाराध्याय: **(Atha Agastya-cāra-adhyāya – Now, the Chapter on the Course of Agastya)**

Description of the sage Agastya—
He who held back Mount Vindhyācala, whose peaks had grown tall to obstruct the path of the Sun; who digested the demon Vātāpi, the enemy of the gods and ripper of the bellies of sages; who drank up the ocean and adorned the southern direction with the ocean of austerity; who made the mass of waters pure—of that sage Agastya a concise description is given here. ॥ 1 ॥

In the description of sage Agastya, description of the ocean as an integral limb—
At first, with immediate flow of water; with the inner mountains whose peaks were produced by the nails of the Makara; and with choicest gems and jewels mingled in streams of water to slight the gods with diadems circumscribed by limited jewels and scattered with many fallen pearls here and there—the ocean which he made exceedingly beautiful. ॥ 2 ॥

By another manner, description of the ocean—
Even though water was taken away by that sage Agastya, the ocean became exceedingly adorned with trees bearing gems, coral, and coral-red, and with mountains devoid of snakes standing apart in rows. ॥ 3 ॥

By another manner, description of the ocean—
Though afflicted by calamity because water was taken away by sage Agastya, the ocean, due to lack of water, attained celestial beauty, being adorned with restless fish, sea-elephants, serpents, and gems and jewels scattered here and there. ॥ 4 ॥

By another manner, description of the ocean—
Even with the water gone, the ocean, furnished with moving fish, oysters, and conch, bears the beauty of a lake in autumn furnished with waves, white blue-lotuses, and swans. (Here, “moving fish” = waves; “oysters” = white blue-lotuses; “conch” = swans.) ॥ 5 ॥

Describing the ocean while describing Agastya—
Clouds in the form of fish, stars in the form of gems, the Moon in the form of a crystal gem, autumnal brightness in the form of absence of water, and the rays in the form of the stones on the hoods of serpents (moonstone, sunstone, etc.) are the Ketu-planets—such a crooked-haired (ocean) he made. ॥ 6 ॥

After describing the ocean, description of Vindhyācala—
Trembling from having peaks which quivered in growing tall to obstruct the path of the Sun; stuck upon the shoulder of a Vidyādhara and with the body of the Vidyādhara busied by the Vidyādharīs; adorned with a trembling and very high flag-like cloth fastened upon the body of the Vidyādhara; with caves possessing cascades; with lions wearing chaplets of arrow-flowers, as it were, with heads of bees engaged in seeking out the fragrance arising from the taste of

blood mixed with the rut of elephants; with rows of bees restless upon blossoming trees shaken when drawn by great elephants and making sweet sounds with joy; and with mountain peaks furnished with horses of the forest, bears, tigers, and monkeys, as if scratching the sky—with such Vindhyācala, furnished in lonely places with mango trees so that it is as if with a love-smitten beloved, with the river Revā; with pleasure-gardens served by gods; and served by Brāhmaṇa sages who live on water, without food, on roots, on air—hear concerning the rising of that sage Agastya who stopped it. ॥ 7 ॥

Effect of Agastya's rising—

Just as a man whose heart is defiled by the filth in the company of the wicked becomes pure in heart by the sight of the good, so too the water mixed with mud in the rainy season becomes pure by the sight of sage Agastya. ॥ 8 ॥

After describing Vindhya, description of the autumn season—

Adorned by rivers resounding with rows of swans situated between red-colored cakravākas placed on both sides like the laughter-set teeth situated between lips reddened by betel—thus autumn is adorned. ॥ 9 ॥

Description of autumn—

Autumn, adorned with rivers furnished with white lotuses situated near blue lotuses and adorned with rows of wandering bees, shines as though a love-smitten woman casting side-glances along with a brow-vine. ॥ 10 ॥

Further description of autumn—

The pond-like beloved, with waves as bracelets, seems to open an eye furnished with the black star in the form of the kumuda (water-lily) filled with bees, in order to see the increased beauty of the Moon when the clouds depart at night. ॥ 11 ॥

Description of the Earth's beauty—

With the hand in the form of tanks adorned with various kinds of wondrous lotuses, swans, cakravākas, and kāraṇḍavas, the Earth, as it were, offers *argha* to sage Agastya with many jewels, flowers, and fruits. ॥ 12 ॥

Preeminence of sage Agastya—

Even water fallen at Indra's command—defiled by the fire in the form of poison from the hood of serpents whose forms are surrounded by clouds—becomes beneficial by the sight of sage Agastya. ॥ 13 ॥

Description of the power of sage Agastya—

By whose mere remembrance sins are destroyed—what to say of the fruit of the praise of Varuṇa's son Agastya? As the procedure of offering *argha* has been stated by sages such as Garga, in that manner I declare it for the benefit of kings.

In the Samāsa Saṁhitā—

Mark of the rising of sage Agastya—
By calculation, knowing his sighting in each country, the learned should declare it. That sighting occurs when the apparent Sun goes to the twenty-third degree of the sign of Leo.

In the Samāsa Saṁhitā—

Mark of offering *argha*—
When the darkness of night has been somewhat destroyed by the rays of the Sun, the king, composed upon the Earth toward the southern direction pointed out by the astrologer, should offer *argha* upon the Earth for sage Agastya.

With what objects *argha* should be given—
Autumnal fragrant flowers, fruits, jewels produced from the ocean, gold, garments, a cow, a bull, food together with milk-pudding, money, curd, fragrant incense, and sandalwood—with these one should give *argha*. ॥ 17 ॥

Fruit of the *argha*—
If a faithful king adopts this procedure of giving *argha* in this way, he becomes free from disease and conquers enemies. If in this way he gives *argha* devotedly for seven years, he becomes lord of the Earth up to the ocean (a universal emperor). ॥ 18 ॥

The result of offering Arghya (libation) to a Brahmin, woman, Vaishya, and Shudra –
If one offers *arghya* (libation) with the object obtained according to one's capacity, then the Brahmin attains the Vedas, the woman attains sons, the Vaishya attains cows, the Shudra attains abundant wealth, and all castes beginning from the Brahmin obtain the destruction of diseases and religious merit. ॥ 19 ॥

Characteristics and results of the complexion of Agastya –
If Agastya appears rough, it causes disease; if tawny-colored, it causes drought; if smoky-colored, it brings evil to cows; if trembling, it causes fear; if reddish, it causes famine and war; and if minute (subtle), it causes the siege of cities. ॥ 20 ॥

Characteristics and results of the complexion of Agastya –
If sage Agastya, shining like gold, silver, or crystal, satisfies the Earth with his rays, then the Earth becomes abundant with grains, fearless, and filled with disease-free men.
Here says Garga –

Auspicious and inauspicious signs of rising and setting –
If sage Agastya is afflicted by a meteor or Ketu, then famine and pestilence occur on Earth. When sage Agastya is seized by the Sun, he rises; and when he is in Rohini, he sets.

Chapter - 13
Atha Saptarshi-Chara-Adhyaya:

Characteristics of the directional positions of the Seven Sages –
Adorned with a special ornament (*ekavali*), decorated with a garland of white lotuses, smiling,

and like a woman accompanied by her lord, the northern direction is beautified by seven sages. Because the row of sages is slightly curved, all the aforementioned special traits arise in them. ॥ 3 ॥

The northern direction, due to the revolution of the Seven Sages under the control of Dhruva, also appears to dance –

The northern quarter seems to dance repeatedly due to the revolution of the Seven Sages revolving under the instruction of Dhruva, the pole-star hero. According to the opinion of the elder Garga, their motion is described.

Here says Bhatta Brahmagupta –

The four Nakshatras of the Seven Sages –

When King Yudhishthira ruled the Earth, the Seven Sages were in Magha Nakshatra. By adding 2526 (of the Shaka era), the elapsed years since Yudhishthira's time are obtained.

Here says Vriddha Garga –

Example of bringing the Nakshatra to the year 1875 of the Shaka era –

The Seven Sages remain in one Nakshatra for one hundred (100) years –

Therefore 2526 + 1875 = 4401, quotient 44, remainder 1.

100 100

Hence, the past Nakshatra is Uttara-Bhadrapada and the present Nakshatra Revati, of which one year has been enjoyed and ninety-nine years remain. ॥ 3 ॥

Measure of Nakshatra duration and their position in Nakshatras –

The Seven Sages remain one hundred years in each Nakshatra. That Nakshatra in which the constellation of the Seven Sages is clearly visible when rising in the eastern direction — in that Nakshatra should their position be understood. Because of the reading *"prāguttarataśraute sado'dayante sa-sādhvīkāḥ"*, it should be understood that they always rise in the northeast direction together with the virtuous Arundhati. ॥ 4 ॥

Here says Kashyapa –

Characteristics of the positions of the Seven Sages –

In the eastern direction is Marichi, to his west is Vashishta, to the west of Vashishta is Angiras, after Angiras is Atri, near Atri is Pulastya, after him Pulaha, after Pulaha is Kratu — thus, from the east onward, is the order of the Seven Sages. Among them, Arundhati is situated dependent on Vashishta. ॥ 5–6 ॥

Their auspicious and inauspicious results –

If the constellation of the Seven Sages is afflicted by a meteor, thunderbolt, or smoke, or is discolored, devoid of light, or of small form, it destroys its own respective class. And if large and pure in form, it increases its own class.

Here says Vriddha Garga –

Their respective classes –

If Marichi is afflicted, he harms Gandharvas, Devas, Rakshasas, Mantras, herbs, Siddhas,

Yakshas, Nagas, and Vidyadharas, and if pure and great in form, he increases them.
If Vashishta is afflicted, he harms Shakas, Yavanas, Daradas, Paradas, Kambojas, ascetics, and forest dwellers, and if endowed with rays, he increases them.
If Angiras is afflicted, he harms the learned, wise, and Brahmins, and if pure and great, he increases them.
If Atri is afflicted, he harms the substances produced in forests and waters, seas, and rivers, and if large and smooth, he increases them.
If Pulastya is afflicted, he harms Rakshasas, Pishachas, Danavas, Daityas, and serpents, and if smooth and great, he increases them.
If Pulaha is afflicted, he harms roots and fruits, and if smooth and great, he increases them.
If Kratu is afflicted, he harms sacrifices and sacrificers, and if smooth and great, he increases them.

Chapter - 14
Atha Kurma-Vibhaga-Adhyaya:

Division of Nakshatras –
By imagining Bharatavarsha situated in the middle of the southern part of Mount Meru, and placing other countries successively beginning from the east, nine divisions are made by groups of three Nakshatras beginning with Krittika.
Here says Garga –

Division of the Madhyadesha –
Bhadra, Arimedha, Mandavya, Shalva, Neepa, Ujihana, Sankhyata, Maru, Vatsa, Ghosha, Yamuna, Sarasvata, Matsya, Madhyamika, Madhura, Upajyotisha, Dharmaranya, Shurasena, Shauragriva, Uddehika, Pandu, Guda, Ashvattha, Panchala, Saketa, Kanka, Kuru, Kalakoti, Kukura, Pariyatra mountain, Audumbara, Kapishthala, and Hastinapura — these countries are situated in the division of three Nakshatras beginning with Krittika (Bharatavarsha). ॥ 2–4 ॥

Names of the countries situated in the eastern direction –
Anjana, Vrishabhadhvaja, Padma and Malyavan mountains, Vyaghramukha, Suhya, Karvata, Chandrapura, Shurpakarna, Khasa, Magadha, Shibiragiri, Mithila, Samatata, Odu (Odisha), Ashvavadana, Dantura, Pragjyotisha, Lauhitya river, Kshiroda ocean, Purushada, Udayagiri, Bhadra, Gaudaka, Paundra, Urakala, Kashi, Mekala, Ambastha, Ekapada, Tamraliptaka, Koshalaka, Vardhamana — these countries are situated in the division of three Nakshatras beginning with Ardra (eastern direction). ॥ 5–7 ॥

Names of the countries situated in the southeastern direction –
Kosala, Kalinga, Vanga, Upavanga, Jatharanga, Shaulika, Vidarbha, Vatsa, Andhra, Chedika, Urdhvakantha, Vrisha, Nalikera, Charmadwipa, near Vindhyachala, Tripuri, Shmashrudhara, Hemakuta, Vyalagreeva, Mahagreeva, Kishkindha, Kantakasthala, Nishada country, Purika, Dasharna, Nagra-Shabara, Parna-Shabara — these countries are situated in the division of three Nakshatras beginning with Ashlesha (southeast direction). ॥ 8–10 ॥

Names of the countries situated in the southern direction –
Lanka, Kalajina, Saurikirna, Talikata, Girinagara, Malaya mountain, Dardura, Mahendra, Malinda, Bharukaccha, Kankata, Kankana, Vanavasi, Shibika, Phanikara, Konkan, Abhira, Akara, Vena, Avarttaka, Dashapura, Gonarda, Kerala, Karnata, Mahatavi, Chitrakuta mountain, Nasikya region, Kolagiri, Chola, Kraunchadwipa, Jatadhara, Kaveri river, Rishyamuka mountain, Vaidurya, Shankhamuktakara country, Avyashrama, Warichara, Dharmapura island, Ganarajya, Krishnavellura, Pishika, Shurpadri, Kusuma city, Tumbavana, Karmanikya, southern sea, Tapasashrama, Rishika, Kali, Maruchipattana, Cherya, Aryaka, Simhala, Rishabha, Baladeva, Padhana, Dandakavana, Timilingashana, Bhadra, Kachchha, Kunjardari, Tamraparni — these countries are situated in the division of three Nakshatras beginning with Uttara-Phalguni (southern direction). ॥ 11–16 ॥

Names of the countries situated in the southwestern direction –
Pahriya, Kamboja, Sindhu, Sauvira, Vadavamukha, Arava, Ambastha, Kapila, Narimukha, Anarta, Phena-giri, Yavana, Margara, Karnapravaya, Parashava, Shudra, Barbar, Kirata, Khandakavya, Abhira, Chanchuka, Hemagiri, Sindhu river, Kalaka, Raivataka, Saurashtra, Badara, Dravida — these countries are situated in the division of three Nakshatras beginning with Swati (southwestern direction). ॥ 17–19 ॥

Names of the countries situated in the western direction –
Maniman, Meghavan, Vanaugha, Kshurarpaṇa, Asta-giri, Aparantaka, Shantika, Haihaya, Prashastadi, Vokana, Panchanada, Ramatha, Parata, Tarakshiti, Junga, Vaishya, Kanaka, Shaka, and other Mleccha tribes dwelling without boundary in the western direction — these are situated in the division of three Nakshatras beginning with Jyeshtha (western direction). ॥ 20–21 ॥

Names of the countries situated in the northwestern direction –
Mandavya, Tushara, Tala, Hala, Madra, Ashmaka, Kuluta, Halada, Strirajya, Nrisimhavana, Khastha, Venumati river, Phalguluka, Guluha, Marukuchcha, Charmaranga, Ekavilochana, Shulika, Dirghagriva, Asyakesha — these are situated in the division of three Nakshatras beginning with Uttara-Ashadha (northwest direction). ॥ 22–23 ॥

Names of the countries situated in the northern direction –
Kailasa, Himavan, Vasuman, Dhanushman, Kraicha, Meru mountain, Uttara-Kuru, Kshudrameena, Kaikaya, Vasati, Yamuna, Bhogaprastha, Arjunayana, Agnidra, Adarsha, Antardvipi, Trigarta, Turaganana, Shramukha, Keshadhara, Chipitanasika, Daseraka, Vatadhana, Sharadhana, Takshashila, Pushkalavati, Kailavata, Kanthadhana, Ambara, Madraka, Malava, Paurava, Kachchhara, Dandapingalaka, Manihala, Huna, Kohala, Shitaka, Mandavya, Bhutapura, Gandhara, Yashovati city, Hematala, Rajanya, Khachara, Gavya, Yaudheya, Dasameya, Shyamaka, Kshemadhurta — these are situated in the division of three Nakshatras beginning with Shatabhisha (northern direction). ॥ 24–28 ॥

Names of the countries situated in the northeastern direction –
Meruka, Nashtarajya, Pashupala, Kira, Kashmir, Abhisara, Darada, Tangana, Kuluta, Sairindhra, Banarashtra, Brahmapura, Darvadamara, Vanarajya, Kirata, China, Kauninda,

Bhalla, Patola, Javasura, Kunata, Khasa, Ghosha, Kuchika, Ekacharana, Anuviddha, Suvarnabhumi, Vasudhana, Divishta, Paurava forest dwellers, Trinetra, Munjadri, Gandharva — these are situated in the division of three Nakshatras beginning with Revati (northeastern direction).

From Samasa-Samhita –

Results of the nine divisions –
If the nine divisions beginning with the southeastern (Agneya) are afflicted by malefic planets, then successively the kings of Panchala, Magadha, Kalinga, Avanti, Anarta, Sindhu, Sauvira, Harahoura, Madra, and Kaulinda countries perish. ॥ 32–33 ॥

Chapter - 15

अथ नक्षत्रव्यूहाध्याय: (Atha Nakshatra-Vyuha Adhyaya – Chapter on the Array of Nakshatras)

Determination of which substances/persons are dependent on which Nakshatra; therein first, items belonging to Krittika Nakshatra –
White (objects), flowers, performers of Agnihotra, those who know mantras, those who know the science of sacrifice, grammarians, mines, smelters, barbers, Brahmin potters, family priests, astrologers — all these belong to **Krittika** Nakshatra. ॥ 1 ॥

Items belonging to Rohini Nakshatra –
Of good conduct, traders, king, yogi, those whose livelihood is by cart, cow, bull, creatures living in water, farmer, mountain, endowed with prosperity — all these belong to **Rohini** Nakshatra. ॥ 2 ॥

Items belonging to Mrigashira Nakshatra –
Fragrant substances, cloth, things produced in water, flowers, fruits, gems, forest-dwellers, birds, deer, drinkers of Soma juice, those who know the art of singing, lustful persons, letter-carriers — all these belong to **Mrigashira** Nakshatra. ॥ 3 ॥

Items belonging to Ardra Nakshatra –
Killers, binders of creatures, speakers of falsehood, goers to others' wives, thieves, **shatha** (tricksters/rogues), causers of division, husk-mixed grains, cruel persons, those who know mantras, knowers of **abhichara** (those who know acts like subjugation, etc.), those who know the rite of raising a **Vetala** — all these belong to **Ardra** Nakshatra. ॥ 4 ॥

Items belonging to Punarvasu Nakshatra –
Truth-speakers, generous, endowed with cleanliness (pure), those who do not covet others' wealth, of good family, beautiful, intelligent, renowned, wealthy, superior grains, merchant, servant, artisan — all these belong to **Punarvasu** Nakshatra. ॥ 5 ॥

Items belonging to Pushya Nakshatra –
Barley, wheat, grains, sugarcane, forest, minister, king, those whose livelihood is from water (fishermen, etc.), good men, **yājñika** (those who conduct sacrifices like *Putrakāmya*, etc.) — all these belong to **Pushya** Nakshatra. ॥ 6 ॥

Items belonging to Ashlesha Nakshatra –
Artificial substances, tubers, roots, fruits, insects, serpents, poison, those who take others' wealth, husk-mixed grains, those who practice all sorts of medicines — all these belong to **Ashlesha** Nakshatra. ॥ 7 ॥

Items belonging to Magha Nakshatra –
Wealthy, granaries, those dwelling on mountains, servants of father and mother, traders, brave, meat-eaters, haters of women — all these belong to **Magha** Nakshatra. ॥ 8 ॥

Items belonging to Purva-Phalguni Nakshatra –
Dancers, women, dear to all, those who know the art of song, artisans, articles of sale and purchase, cotton, salt, honey, oil, boys — all these belong to **Purva-Phalguni** Nakshatra. ॥ 9 ॥

Items belonging to Uttara-Phalguni Nakshatra –
Soft-hearted, pure (not desiring others' wealth, etc.), skilled in polity, hypocrite (reviler of the Veda), generous, engaged in the scriptures, excellent grains, exceedingly wealthy, king devoted to action — all these belong to **Uttara-Phalguni** Nakshatra. ॥ 10 ॥

Items belonging to Hasta Nakshatra –
Thief, those who go in an elephant or chariot, master of elephant-training, artisan, articles of sale and purchase, husk-mixed grains, listeners, merchant, brilliant — all these belong to **Hasta** Nakshatra. ॥ 11 ॥

Items belonging to Chitra Nakshatra –
Those who know ornamentation, those who know the marks of gems, **rāgajña** (dyers), scribe, those who know the art of singing, makers of fragrant substances, mathematician, weaver, physician for eye-diseases, grains useful to the king — all these belong to **Chitra** Nakshatra. ॥ 12 ॥

Items belonging to Swati Nakshatra –
Birds, deer, horse, buyers and sellers, grains, small creatures, ascetic, skilled in buying and selling — all these belong to **Swati** Nakshatra. ॥ 13 ॥

Items belonging to Vishakha Nakshatra –
Red flowers, red fruits, black (objects), sesame, mung beans, cotton, chickpea, devotees of Indra, devotees of Fire — all these belong to **Vishakha** Nakshatra. ॥ 14 ॥

Items belonging to Anuradha Nakshatra –
Strong, chief among groups, devotees of holy men, those who sit in assemblies, those who go by vehicles, holy men of regions, autumnal grains, etc. — all these belong to **Anuradha** Nakshatra. ॥ 15 ॥

Items belonging to Jyeshtha Nakshatra –
Very brave, of good family, wealthy, renowned, those who take others' wealth, kings desiring to conquer others, commanders — all these belong to **Jyeshtha** Nakshatra. ॥ 16 ॥

Items belonging to Mula Nakshatra –
Medicines, chief among trader-groups, flowers, those whose livelihood is by roots and fruits, all kinds of seeds, very wealthy, fruit-eaters, root-eaters — all these belong to **Mula** Nakshatra. ॥ 17 ॥

Items belonging to Purvashadha Nakshatra –
Soft-hearted, those who go by water-routes (fishermen, aquatic creatures, etc.), truth-speakers, those who do not desire others' wealth, etc., wealthy, bridge-builders, those whose livelihood is from water, fruits and flowers produced from water — all these belong to **Purvashadha** Nakshatra. ॥ 18 ॥

Items belonging to Uttarashadha Nakshatra –
High officials (**mahāmātra**), wrestlers skilled in hand-to-hand combat, elephant, horse, devotees of the gods, immovables (trees, etc.), skilled in battle, enjoyers, brilliant — all these belong to **Uttarashadha** Nakshatra. ॥ 19 ॥

Items belonging to Shravan Nakshatra –
Skillful in illusion (**māyā-patu**), always ready to do all works, energetic, righteous, devotee of the Lord, truth-speakers — all these belong to **Shravan** Nakshatra. ॥ 20 ॥

Items belonging to Dhanishtha Nakshatra –
Devoid of ego, eunuch, those who make unstable friendships, haters of women, generous, very wealthy, master of the senses — all these belong to **Dhanishtha** Nakshatra. ॥ 21 ॥

Items belonging to Shatabhisha Nakshatra –
Noosers (those who kill creatures with nets), fishers, all substances produced in water, those whose livelihood is from aquatic creatures, keepers of pigs (Doms, etc.), washerman, sellers of liquor (Kalwar, etc.), bird-killers — all these belong to **Shatabhisha** Nakshatra. ॥ 22 ॥

Items belonging to Purva-Bhadrapada Nakshatra –
Thief, cowherd, cruel, **kīnāśa** (mean/low persons), base people, **shatha** (averse to beneficence), heterodox, devoid of vows, those who know hand-to-hand combat — all these belong to **Purva-Bhadrapada** Nakshatra. ॥ 23 ॥

Items belonging to Uttara-Bhadrapada Nakshatra –
Brahmin, praisers (makers of fame), generous, ascetic, very wealthy, **āshrāmī** (one living in the

fourth *āshrama*), hypocrite (reviler of the Veda), king, excellent grains — all these belong to **Uttara-Bhadrapada** Nakshatra. ॥ 24 ॥

Items belonging to Revati Nakshatra –
Substances produced from water, fruits and flowers, salt, gems, conch, pearls, lotus and other fragrant flowers, fragrant substances, buyers and sellers, boatmen — these belong to **Revati** Nakshatra. ॥ 25 ॥

Items belonging to Ashvini Nakshatra –
Horse-thieves, commanders, physicians, servants, horse, riders of horses, buyers and sellers, beautiful, horse-keepers — all these belong to **Ashvini** Nakshatra. ॥ 26 ॥

Items belonging to Bharani Nakshatra –
Those who eat meat mixed with blood, cruel; those who kill, bind, and beat; husk-mixed grains; born in low families; devoid of qualities like generosity — all these belong to **Bharani** Nakshatra. ॥ 27 ॥

Nakshatras of the castes beginning with Brahmin –
Purva-Phalguni, Purvashadha, Purva-Bhadrapada, and Krittika — of Brahmins.
Uttara-Phalguni, Uttarashadha, Uttara-Bhadrapada, and Pushya — of Kshatriyas.
Revati, Anuradha, Magha, and Rohini — of Vaishyas.
Punarvasu, Hasta, Abhijit, and Ashvini — of those who do buying and selling.
Mula, Ardra, Swati, and Shatabhisha — of cruel men.
Mrigashira, Jyeshtha, Chitra, and Dhanishtha — of servants.
And **Ashlesha, Vishakha, Shravan, and Bharani** — are the lords of Chandālas. ॥ 28–30 ॥

Purpose (definition) of affliction by malefic planets –
A Nakshatra which is free from the Sun and Saturn, defiled by the piercing or retrograde motion of Mars, at the time of eclipse, struck by a meteor, afflicted by the Moon's rays (when the Moon covers the Yogatara of a Nakshatra or passes to its southern side), or naturally devoid of excellent qualities — such a Nakshatra the sages call **afflicted**. Thus an afflicted Nakshatra destroys its own class mentioned before; and if endowed with characteristics different from the aforesaid, it causes their prosperity.

Chapter - 16

अथ ग्रहभक्तियोगाध्यायः (Atha Graha-Bhakti-Yoga Adhyaya – Chapter on Planetary Patronage/Devotion)

Which planet is lord over which persons and regions; therein first, the Sun's regions and persons –

The regions east of the Narmada river, the Shona river, Uḍ, Vanga, Suhma, Kalinga, Bahlika, Shaka, Yavana, Magadha, Shabara, Pragjyotisha, China, Kamboja, Mekala, Kirata, Vitaka, those dwelling outside and in the middle of the mountains, the Pulinda people, the eastern half of Dravida, the southern bank of the Yamuna, the middle part of the Vindhyachala, the people situated in the country of Kalinga; thieves, **Pundra**, **Golangula**, Shri-parvata, Vardhamana, the Ikshuvati river, robbers, dwellers in the Parata country, forest, those who tend cows, seeds, husk-mixed grains, pungent substances, trees, gold, fire, poison, brave in battle, herbs, traders, four-footed animals, farmers, king, cruel persons, those who desire victory in battle, thieves, serpents, solitary places, renowned, sharp (neem, etc., or persons) — over all these the **Sun** is lord.

Here says Kashyapa –

The Moon's regions and persons –

Mountain-forts, water-forts, men of the Kosala country, Bharukaccha, the ocean, Romaka, Tushara, forest-dwellers, Tangana, plough, the women's realm, the islands within the great ocean, sweet taste, all flowers and fruits, water, salt, gems, conch, pearls, things produced from water (lotus, etc.), grains, barley, herbs, wheat, men who drink Soma juice, **Ākranda** (a subordinate kingdom under border-guards), Brahmin, all white-colored objects, beloved of all people, horse, lustful, woman, commander, foodstuffs, garments, horned animals, nocturnal beings, farmer, sacrificer — over all these the **Moon** is lord.

Here says Kashyapa –

Mars's regions and persons –

The countries situated to the west of the Shona river, the Narmada river, and the Bhimaratha river; Nirvindhya, Vetravati, Shipra, Godavari, Vena, Ganga, Payoshni, Sindhu, Malati and Para rivers; Northern Pandya, Mount Mahendra; the regions near Vindhyachala and Malaya mountain; Chola, Dravida, Videha, Andhra, Ashmaka, Bhasapara, Kounṅana, Samantrishika, Kuntala, Kerala, Dandakaranya, Kantipura; Mlecchas, mixed castes; Nasikya, Bhogavardhana, Tarkamrata; the regions near Vindhyachala; those who drink the sweet waters of the Tapi and Gomati rivers; urban people; farmers; Parata; performers of Agnihotra; goldsmith; those whose livelihood is from weapons; forest-dwellers; forts; people of Karvata country; executioner; sinner; not engaged in (proper) works; king; boy; elephant; hypocrite; killers of children; herdsmen; red fruits; red flowers; coral; commander; jaggery; liquor; sharp (neem, etc.); treasury-house; performer of Agnihotra; mines of metals; **Shakya** (red cloth); mendicant; thief; **shatha** (averse to others' works); firm hatred; excessive eating — over all these **Mars** is lord.

Here says Kashyapa –

Mercury's regions and persons –

The Lohitya and Sindhu rivers, Sarayu, Gambhirika, Rathakhya, Ganga, Kaushiki, Vipasha, Sarasvati, and Chandrabhaga rivers; the eastern half of Mathura; the Himalayan mountain, the

Gomanta mountain, and the region of Chitrakuta mountain; people situated in Saurashtra country; those who live under the protection of a bridge; those who live depending on water-ways; traders; those who dwell in holes; those who dwell on mountains; reservoirs, wells, tanks, etc.; those who know machines; those who know the art of singing; scribe; those who know the marks of gems; dyer; makers of fragrant substances; painter; grammarian; astrologer; **āyushya** (those who know rasayana, *vājīkaraṇa*, etc.); artisan; spy; trickster (those who sustain life by shows like those of Prasena, etc.); boy; poet; **shatha** (averse to beneficence); tale-bearer; **abhichara**-knower (those who know subjugation, expulsion, enmity, killing, etc.); messenger; eunuch; mocker; those who know the rites for spirits and ghosts; those who know **indra-jāla** (magic); guard; dancer; ghee; oil; unguents (sesame, walnut, etc.); seeds; bitter (neem, etc.); votary (brahmacharin, etc.); those who know *rasāyana*; **vesara** (a special breed of horse) — over all these **Mercury** is lord.

Here says Kashyapa –

Jupiter's regions and persons –
The eastern part of the Sindhu river, the western half of Mathura; Bharata, Sauvira, Strugha; those dwelling in the northern direction; the Vipasha river, the Shatadru river; Ramatha, Shalva, Traugarta, Paurava, Ambastha, Parata, Vatadhana, Yaudheya, Sarasvata, Arjunayana, and half of the villages and countries of Matsya — elephant, horse, family priest, king, minister; those engaged in auspicious works (marriage, initiation, etc.); attached to nourishing works; compassionate; truth-speakers; endowed with cleanliness (pure — not desiring others' wealth, etc.); ascetic; learned; generous; righteous; those born in villages; grammarian; those who know meaning; those who know the Veda; knowers of **abhichara**; those who know polity; the king's equipment (weapons, armor, etc.); parasol, banner, chowrie, etc.; fragrant substances; **kuṣṭha**, **mānsītakara**, **rasa** (bol), salt, mung beans, etc.; sweet taste; **madhūcchishta** (wax); **choraka**; fragrant substances — over all these **Jupiter** is lord.

Here says Kashyapa –

Venus's regions and persons –
The city of Takshashila, the country of Martikavata, Bahugiri, Gandhara, Pushkalavataka, Prasthala, Malava, Kaikaya, Dasharna, Ushinara, Shivi; those who drink the waters of the Vitasta, Airavati, and Chandrabhaga rivers; chariot; silver; mine (place of wealth-production); elephant; horse; high official (over elephants); wealthy; fragrant substances; flowers; sandal; gems (such as *pavarāga*, etc.); **vajra** (diamond); ornaments; **amburuḥa** (lotus, etc.); bed; chief; youth; woman; instruments of love (flowers, incense, garland, sandal, etc.); those who eat relishable (purified) food; those who eat sweet food; garden; water; lustful; renowned; happy; donor; beautiful; learned; minister; those whose life-journey is by buying and selling; potter; **chitrāndaja** (various kinds of birds); the triad of fruits (cardamom, clove, kakola); silk cloth (eye-cloth); blanket; **patraurṇika** (bleached silk); **rodhra** (a kind of fragrant substance); **patra** (aromatic leaf); **cocha** (coconut); **jātī** fruit (nutmeg); agarwood; **vachā** (sweet flag); **pippalī** (long pepper); sandal — over all these **Venus** is lord.

Here says Kashyapa –

Saturn's regions and persons –

Anarta, Arbuda, Pushkara, Saurashtra, Abhira, Shudra, Raivataka, the region where the Sarasvati River becomes unobservable (the western region), men born in the land of Kuru (those dwelling in Sthanesvara), the Prabhasa kshetra, the city of Vidisha, the Vedasmriti River, men born on the banks of the Mahi River, wicked, unclean, base, oil-pressers, weak eunuchs, those situated in places of confinement, bird-killers, engaged in impurity (impure), fishermen, ugly, old, keepers of pigs (Doms), chiefs in assemblies, non-observers of rules, Shabara, Pulinda (Mleccha caste), poor, pungent substances (pepper, etc.), bitter (neem, etc.), alchemy, widow woman, serpent, thief, she-buffalo, donkey, camel, chickpea, "vātala" pulses (matar, rajmash, etc.), grains—over all these Saturn is lord.

Here says Kashyapa –

Rahu's regions and persons –

Those dwelling on mountain peaks, in ravines (low places in mountains) and clefts (caves), the Mleccha caste, Shudra, jackal-eaters, Shulika, Vokana, Ashvamukha, Angahinga men, those who bring disgrace upon the family, cruel, ungrateful (not acknowledging benefaction), thief, those who conduct false dealings, devoid of cleanliness, miserly, donkey, spy, those who know hand-to-hand combat, exceedingly wrathful, cave-dwellers, base, degraded (vile men), false-religionists, Rakshasas, all creatures that sleep excessively, without religion, urad, sesame—over all these Rahu is lord.

Here says Kashyapa –

Ketu's regions and persons –

Mountain forts, Pahlava, Shveta, Huna, Chola, Avagana, desert, China, cave-dwellers, wealthy, of great desire (munificent), traders, valiant, goers to others' wives, quarrelsome, eager to hear others' faults, intoxicated (mad), foolish, irreligious, desirous of conquest—over all these Ketu is lord.

And in the Samasa-Samhita –

Their application –

At the time of rising, one that is clear, great, naturally situated, and struck by thunderbolt, meteor, dust, and planetary battle, being in its own sign, situated in exaltation, or a planet aspected by benefics (Moon, Mercury, Jupiter, and Venus)—the lord of such is auspicious for them. ॥ 40 ॥

And their further application –
A planet which is endowed with characteristics opposite to the aforesaid auspicious marks destroys by weapon-battle and disease its own attendant class; and it makes kings miserable. Upon such prodigies occurring, if the king or people have no fear of enemy, son, or the minister who decides, then, because of drought, there is movement of them and the people to unprecedented towns, mountains, and rivers. That is, upon such prodigies, the king or people certainly have fear of enemy, son, or minister. If somehow they become free from those calamities, then because of drought, for food-grain, vegetables, and water, they must go to those towns, mountains, and rivers where they had never gone.

Chapter – 17

Atha Graha-Yuddha-Adhyaya (Chapter on Planetary Wars)

Preface –
In whatever manner and at whatever time the seers who know the three times have spoken of the war of the star-planets, I have stated it in the Karana (Panchasiddhantika), taking from the Surya-Siddhanta. ॥ 1 ॥

Cause of war –
While moving in the sky, situated each on its own path above, appearing as if united when seen from a very great distance, the planets—according to the differences of the "approach-order yoga"—have, by Parashara and other sages, four kinds of planetary wars declared: **Bheda, Ullekha, Aṃshu-Mardana,** and **Apasavya.**

When the upper disc covers the lower disc, it is *Bheda*; when the circumference of one disc touches that of another, it is *Ullekha*; by the contact of rays of two closely situated planets, it is *Aṃshu-Mardana*; and when they are exactly aligned north-south, the planetary war called *Apasavya* occurs.

Here says Kashyapa –
Results of the four kinds of wars –
If it is *Bheda*-war, there is destruction of rain and mutual dissension among friends and men of noble birth.
If *Ullekha*-war, there is fear of enemies, opposition among ministers, and famine.
If *Aṃshu-Virodha*-war, there is mutual war among kings; by weapons, disease, and hunger men suffer greatly.
And in *Apasavya*-war (when a planet passes from the southern side and goes to the left side), there is mutual war among kings. ॥ 4–5 ॥

Names of Yayi, Nagar, and Akranda planets –

The Sun at midday is Akranda, in the east is Paur, and in the west is Yayi. Mercury, Jupiter, and Saturn are always Paur; the Moon is Akranda; and Ketu, Mars, Rahu, and Venus are called Yayi.

If these planets are afflicted, they destroy the Akranda, Yayi, and Paur classes respectively:
If an Akranda-designated planet is afflicted, it destroys the Akranda (defenders, guards, etc.);
if a Yayi-designated planet is afflicted, it destroys the Yayi (travellers);
and if a Paur-designated planet is afflicted, it destroys the townsmen.
If victorious, they ensure victory of their own class. ॥ 6–7 ॥

Special note –

If a Paur planet afflicts a Paur planet, then a city-dwelling king is destroyed by another city-dwelling king.
Likewise, if a Yayi planet afflicts an Akranda planet, the Yayi people destroy the Akranda people;
if an Akranda planet afflicts a Yayi planet, the Akranda causes the destruction of the Yayi.
If a Nagar planet afflicts a Yayi, then by Nagar people the Yayi are destroyed;
and if a Yayi planet afflicts a Nagar planet, then by Yayi people the Nagar people are destroyed. ॥ 8 ॥

Characteristics of defeated planets –

Situated in the southern direction, rough, trembling, not going near the other planet and turning back, of minute disc, assailed by another planet, defective, devoid of rays, and discolored — planets with these marks are defeated.

Here says Garga –

Characteristics of victorious planets –

Those possessing the opposite marks (situated northward, smooth, steady, approaching the other planet, upper, radiant), and even if in the south but having a great, clear, and lustrous disc, are victorious.

Here says Pulisha Acharya –

Further signs of victorious planets –

If at the time of conjunction both planets are radiant, great, or smooth, then affection arises between their classes; if the reverse, their classes perish. ॥ 11 ॥

Special note –

If planetary war (between planets such as Mars, etc.) or conjunction (with the Moon) is indistinct—when it is not clear who is victorious or when the Moon passes neither north nor

south but through the middle—then on Earth, the result should be declared indistinct and doubtful even for kings. ॥ 12 ॥

Results when Mars is defeated by all planets –

If Mars is defeated by Jupiter, the inhabitants of Bahlika, those desiring victory, and those whose livelihood is by fire are afflicted.

If defeated by Mercury, the people of Shurasena, Kalinga, and Shalva countries are afflicted.

If defeated by Saturn, the victors dwelling in cities and the populace suffer.

If defeated by Venus, the treasury (inner house), Mleccha caste, and Kshatriya are afflicted. ॥ 13–14 ॥

Results when Mercury is defeated by all planets –

If Mercury is defeated by Mars, rivers, ascetics, the inhabitants of Ashmaka, kings, northern dwellers, and sacrificially initiated persons are afflicted.

If defeated by Jupiter, the Mleccha and Shudra castes, thieves, rich men, city dwellers, those in Trigarta, and mountain dwellers suffer, and there is an earthquake.

If afflicted by Saturn, boatmen, warriors, fat-products, the wealthy, and pregnant women are afflicted.

If defeated by Venus, there is wrath of fire, destruction of grain and clouds, and ruin of travelling kings. ॥ 15–17 ॥

Results when Jupiter is defeated by all planets –

If Jupiter is defeated by Venus, the inhabitants of Kuluta, Gandhara, Kaikaya, Madra, Shalva, Vatsa, and Vanga, as well as cows and grains, suffer.

If defeated by Mars, the Madhyadesha, the king, and cows suffer.

If defeated by Saturn, the inhabitants of Arjunayana, Vasa, Yaudheya, and Shibi, and Brahmins suffer.

If defeated by Mercury, Mlecchas, truth-speakers, weapon-bearers, and the Madhyadesha are destroyed; also the result of devotion to Jupiter (Guru-Bhakti-Phala mentioned in Graha-Bhakti-Yoga Adhyaya) perishes. ॥ 18–20 ॥

Results when Venus is defeated by all planets –

If Venus is defeated by Jupiter, there is destruction of leaders (Yayi, Nayaka) and chiefs, mutual conflict between Brahmins and Kshatriyas, drought, and affliction of the people of Kosala, Kalinga, Vanga, Vatsa, Matsya, and the Madhyadesha, eunuchs, and those in Shurasena.

If defeated by Mars, the commander dies and kings fight among themselves.

If defeated by Mercury, mountain dwellers, cows’ milk, and rainfall diminish.

If defeated by Saturn, chiefs of assemblies, warriors, Kshatriya class, and water-born products suffer; also the general devotion result and his own devotion result perish. ॥ 21–24 ॥

Results when Saturn is defeated by all planets –
If Saturn is defeated by Venus, the prices of all goods rise, and serpents, birds, and jewelers suffer.
If defeated by Mars, the inhabitants of Tangana, Andhra, Odu, Kashi, and Bahlikas suffer.
If defeated by Mercury, those in Anga country, merchants, birds, beasts, and elephants are afflicted.
If defeated by Jupiter, the women-abounding countries, the inhabitants of Mahishaka, and the Shaka countries suffer. ॥ 25–26 ॥

Special note –
These special results of Mars, Mercury, Jupiter, Venus, and Saturn are stated; the remaining results should be declared according to planetary devotion (*Bhakti*). Just as planets are afflicted manifestly or unmanifestly, in the same manner they destroy their devotion manifestly or unmanifestly.

Chapter - 18

Atha Shashi-Graha-Samāgama Adhyāya (Chapter on the Moon's Conjunction with Planets)

First, the motion and result of the Moon –
If, being near Nakshatras or planets, the Moon moves in a circumambulating course to the **north**, it becomes auspicious for kings; and if it moves to the **south**, it becomes inauspicious.

Special note –
This conjunction occurs only with those Nakshatras whose "Shar" (latitude) is equal to or less than the Moon's "Shar." Thus, the Nakshatras **Krittika, Rohini, Pushya, Magha, Chitra, Vishakha, Anuradha, Jyeshtha, Shatabhisha, and Revati**—their latitude being less than the Moon's—come into conjunction with it.
Those Nakshatras whose **northern latitude** is greater than that of the Moon—of them the Moon always passes on the **southern side**; and of those whose **southern latitude** is greater than that of the Moon—the Moon always moves on their **northern side**.

Here says Vriddha Garga –

Result when the Moon passes north of Mars –
If the Moon moves to the north of Mars, the mountain-dwellers and the strong become

victorious; the Kshatriya groups along with Yayi men rejoice, and the Earth is filled with abundant grains. ॥ 2 ॥

Result when the Moon passes north of Mercury –
If the Moon moves to the north of Mercury, the city-dwelling kings are victorious; there is plenty, increase of grain, inner contentment among people, and increase of royal treasure. ॥ 3 ॥

Result when the Moon passes north of Jupiter –
If the Moon moves to the north of Jupiter, there is growth of townsmen, Brahmins, Kshatriyas, scholars, religion, and the Madhyadesha; prosperity prevails, and all people become joyful. ॥ 4 ॥

Result when the Moon passes north of Venus –
If the Moon moves to the north of Venus, there is increase of treasure, elephants, and horses; victory for archers, sinners, and conquerors; and fine production of grains. ॥ 5 ॥

Result when the Moon passes north of Saturn –
If the Moon moves to the north of Saturn, townsmen and kings become victorious, and the people of the Shaka, Vahlika, Saindhava, and Pahlava countries are filled with joy. ॥ 6 ॥

Special note –
If the Moon, free from portents, moves north of Nakshatras or planets, the substances belonging to those Nakshatras or planets are strengthened; if it moves south of them, it causes loss. ॥ 7 ॥

Additional note –
The results mentioned for the Moon moving **north** of planets become reversed when it moves **south** of them.
Thus, when planets or Nakshatras are together with the Moon, that is called **Conjunction (Samāgama)**; when together with the Sun, **setting (Asta)**; and mutual union of planets such as Mars is called **War (Yuddha)**.

Chapter - 19

Atha Graha-Varsha-Phala Adhyāya (Chapter on Annual Results of Planets)

Result of the Year of the Sun –
In the year, month, or day of the Sun, there is little grain on Earth; forests are filled with toothed animals (serpents, boars, etc.) desirous of feeding by fate; rivers have little water; herbs having potency for curing diseases are scarce; even in winter (Magha, Phalguna) the Sun's heat is severe; there is lack of rainfall though clouds are mountain-like; stars and the Moon lack brightness; ascetics are sorrowful; herds of cows are afflicted.
In battle, armies composed of elephants, horses, and foot soldiers, intolerable in might, with bows, swords, and clubs, accompanied by ministers and kings, wander destroying regions.

Here says Yavaneshvara –

Result of the Year of the Moon –
In the year, month, or day of the Moon, the sky is covered by clouds filling the Earth with pure waters like moving mountains, serpents, lampblack, bees, and buffalo horns; waters filled with lotuses and water-lilies; gardens blooming with trees and humming bees; cows giving abundant milk; beautiful women continually delighting their husbands; with wheat, barley, fine grains, and sugarcane fields; with mines and productive centers; pervaded by fire-places and joined with sacrifices and sacred rites (such as Putrakāmya); the Earth is protected by the king.

Here in the Samāsa-Saṃhitā –

Result of the Year of Mars –
In the year, month, or day of Mars, dreadful fires driven by wind move about, wishing to burn villages, forests, and cities. Men, robbed by thieves, cry out in distress. Clouds with compact forms yield little rain. Grains grown in low lands dry up; even ripened grains are destroyed by lightning and other portents. Kings are negligent of righteousness. Paittika (bilious) diseases increase. People suffer from serpents. Thus, under Mars, the people are afflicted and grains perish.

Here in the Samāsa-Saṃhitā –

Result of the Year of Mercury –
In the year, month, or day of Mercury, those skilled in trickery, acquainted with magical arts (Indra-jāla), observers of marvels, knowers of wealth-producing places, dwellers of cities, experts in singing, writing, mathematics, and weaponry thrive. Kings, desiring mutual affection, delight to give one another wonderful and joyful objects. Agriculture, cattle-rearing, and trade succeed. There is frequent recitation of the Vedas (Rig, Yajur, Sama).
The polity follows the book of “Dandaniti” written by King Manu — as King Manu protected his subjects, so the king in that year protects his people.
Some are engaged in spiritual knowledge (Yoga), some in logic (Anvikshiki). Comedians, messengers, poets, boys, eunuchs, and strategists, as well as those dwelling on bridges, water, and mountains, are pleased. Herbs abound on Earth.

Here in the Samāsa-Saṃhitā –

Result of the Year of Jupiter –
In the auspicious year, month, or day of Jupiter, there is Vedic sound — uttered by an excellent Brahmin at a time not forbidden for sacrifice, extended, reaching heaven, piercing the minds of Rakshasas that hinder fame, and pleasing the hearts of Indra and others.
The Earth is filled with fine grains, many elephants, infantry, horses, wealth, and vast cow-herds, well protected by kings. Men resemble gods. The sky is filled with lofty clouds continually pouring water on Earth. The land is rich in various grains and prosperity.

Special note –
Here “auspicious year” is said because, according to the Jupiter’s transit, the years named

Pingalaka and **Raudra** are inauspicious; therefore, when Jupiter rules such years, his full result does not occur. When he rules the years named **Prabhava, Shukla, Pramoda,** etc., the full result of Jupiter takes place.

Here in the Samāsa-Saṃhitā –

Result of the Year of Venus –
In the year, month, or day of Venus, the Earth abounds in rice and sugarcane, its banks filled by waters fallen from mountain-like clouds, covered with lovely tanks full of lotuses and water, variegated with diverse colors, and shines like a woman adorned with all ornaments.
Kings, destroying the armies of their enemies, fill all directions with victory shouts. The good are joyous, the wicked perish, and the Earth is filled with sources of wealth.
In springtime, women joyfully drink wine again and again, sing pleasing songs with flute and lute, dine repeatedly with guests, friends, and relatives; and everywhere resounds the praise of Kamadeva.

Here in the Samāsa-Saṃhitā –

Result of the Year of Saturn –
In the year, month, or day of Saturn, the kingdoms are full of wars connected with thieves, devoid of cattle and grain, with families repeatedly lamenting deaths of kinsmen in battles, afflicted by principal diseases and hunger.
The sky is devoid of clouds driven away by wind. The Earth is full of destroyed trees; the sky lacks rays of Sun and Moon. Wells, ponds, and tanks are choked with dust; rivers have little water. Indra gives little rain, hence in some places crops perish for want of water, while in others they thrive by being moistened.

Here in the Samāsa-Saṃhitā –

Special note on the Yearly Results –
A planet minute in form, with indistinct rays, placed in a low region, or defeated in planetary war, does not yield full results. When endowed with opposite qualities, it gives full results.
In inauspicious years, the adverse monthly results of the Sun, Mars, and Saturn increase. Hence, when a malefic planet rules both year and month, extremely evil results arise. If both year-lord and month-lord are benefic, good results increase; if one benefic and one malefic, moderate results occur.

Chapter - 20

Atha Graha-Shringataka Adhyāya (Chapter on Planetary Configurations)

Directional results according to the rising and setting of the planets –
In the direction where all the visible planets (Mars, Mercury, Jupiter, Venus, and Saturn) appear,

and in the direction where they set with the Sun, in that direction arises fear of weapon-strife, famine, and calamity.

Here says Kashyapa –

Depiction of planetary formations –
If the planetary arrangement (shape of planets) forms a **wheel**, **bow**, **triangle (shringaṭaka)**, **staff**, **fort**, **weapon (prāsa)**, **spear**, **thunderbolt**, or is thin in the middle and broad on both sides, then throughout the Earth there arise famine, drought, and war among men and kings.

Here says Kashyapa –

Auspicious and inauspicious results according to the sky's division –
At sunset, in that part of the sky over a region where the row of planets is visible, there occurs the arrival of another king and the affliction caused by another king. ॥ 3 ॥

Result of planets situated in Nakshatras –
In the Nakshatra with which the planets are conjoined, they destroy those persons mentioned in the **Nakshatra-Kurma** and **Nakshatra-Vyuha** corresponding to that Nakshatra.
If both (planet and Nakshatra) possess clear and pure rays, they produce prosperity instead.

Here in the Samāsa-Saṃhitā –

The six planetary Yogas –
The six Yogas are:
Graha-Samvarta, Graha-Samāgama, Graha-Sammohā, Graha-Samāja, Graha-Sannipāta, and **Graha-Kosha.**
Their characteristics and results are now stated. ॥ 5 ॥

Characteristics of the six Yogas –
When in one Nakshatra, four or five malefic planets unite with a **Paur** planet, that is **Samvarta**;
if **Ketu** or **Rahu** is there, it is **Sammohā**;
if a **Paur** planet joins another **Paur**, or a malefic joins another malefic, it is **Samāja**;
if, in conjunction of **Saturn** and **Jupiter**, another planet enters, it is **Kosha**;
if one planet rises in the **west** and another in the **east** but both are within one Nakshatra, that is **Sannipāta**;
and differing from these five marks, it is **Samāgama**.

In such a **Samāgama**, planets moving with clear, stable, and radiant discs are auspicious; otherwise inauspicious.

Results of these Yogas –
In **Samvarta** and **Samāgama**, moderate results occur;
in **Sammohā** and **Kosha**, the people experience fear;
in **Samāja**, results are balanced (greater later than earlier);
and in **Sannipāta**, mutual enmity arises.

Chapter - 21
Atha Garbha-Lakshana Adhyaya:

Purpose of explaining the signs of conception—
The life of the world is food; that food is dependent on the rainy season; therefore the rainy season should be examined by mechanism (astronomical apparatus). ॥ 1 ॥

Definition of conception—
Seeing the conception-signs composed by sages Garga, Parashara, Kashyapa, Vajra, and others, I am declaring the characteristics of the rainy season. ॥ 2 ॥

Praise of astrologers who know conception-signs—
Those astrologers who, day and night, remain engaged with an undistracted mind in conception-signs—their speech, like that of a sage, does not err in knowledge of rain. ॥ 3 ॥

Praise of the science—
What science is better than this science of astrology? None. By knowing it, even in this perishable Kali age, men become seers of the three times. ॥ 4 ॥

Opinion of another—
Someone's opinion is that after the full moon of the bright half of Kartika the days of conception occur; this is not everyone's opinion; therefore the view of Garga and other teachers is stated.

View of Garga and other teachers—
From the bright fortnight of Margashirsha, when the Moon is situated in Purvashadha Nakshatra, from that time the signs of conception should be known. Here the word "va" ("or") has a fourfold sense.

Here says Kashyapa—
Time of the delivery of conception—
From the Nakshatra in which, being situated, the Moon causes conception, under the Moon's control on the one-hundred-and-ninety-fifth (195th) day, its delivery takes place.

Special—
Since by lunar reckoning the same Nakshatra does not occur on the 195th day, the 195th day should be taken by Savana measure. By Savana measure, on the 195th day exactly that same Nakshatra occurs.

In the Samasa-Samhita a clear statement—
Again, the delivery time of conception—
If conception is in the bright fortnight, then delivery is in the dark fortnight; if in the dark fortnight, then in the bright; if by day, then at night; if by night, then by day; if at the eastern twilight, then at the western; and if at the western twilight, then at the eastern.

Here says Garga—

Special marks of conceptions and determination of time—

Conception situated in the bright halves of Margashirsha and Pausha gives a slow result (little rain). Here the months should be taken from the bright fortnight of Chaitra, as: from Chaitra Shukla Pratipada to Vaishakha Krishna Amanta one month; from Vaishakha Shukla Pratipada to Jyeshtha Krishna Amanta the second month, and so on. If conception is in Pausha Krishna fortnight, then delivery (rain) is in Shravana Shukla; if in Magha Shukla, then in Shravana Krishna; if in Magha Krishna, then in Bhadra Shukla; if in Phalguna Shukla, then in Bhadra Krishna; if in Phalguna Krishna, then in Ashvina Shukla; if in Chaitra Shukla, then in Ashvina Krishna; and if in Chaitra Krishna, delivery (rain) is in Kartika Shukla.

Here says Garga—

Marks of cloud and wind—

If during the conception period the cloud is in the east, then at delivery it is in the west; if in the west, then in the east; if in the south, then in the north; if in the north, then in the south; if in the southeast, then in the northwest; if in the northwest, then in the southeast; if in the northeast, then in the southwest; and if during conception the cloud is in the southwest, then at delivery the cloud is in the northeast. In the same way, the reversal of the directions of the wind should be understood; for example, if during conception the wind is from the east side, then at delivery it is from the west side, and so on.

Here says Parashara—

Signs of the occurrence of conception—

During the conception period, a wind that is delightful, pleasant to the touch, and arising in the north, northeast, or east; a clear sky; the Sun and Moon with smooth and white halos; extended and smooth clouds in the sky; needle-shaped, razor-shaped, and red clouds; a sky filled with the Moon and stars clear like a crow's egg or like a peacock's neck; a rainbow; sweet sounds of clouds; lightning and parhelia brightening the eastern and western twilights; birds and beasts standing facing the Sun in the north, northeast, or east; planets moving on the northern path of the Nakshatras and being clear and free from portents; sprouts of trees without obstruction; men and animals joyous—if the conception-time is endowed with all these qualities, the conception is strengthened. From the bright fortnight of Margashirsha to the end of Vaishakha the conception should be examined, and for the increase of conception I state further the remaining signs produced by the nature of the seasons.

Here says Parashara—

Conception signs according to the seasons—

In Pausha and Margashirsha, clouds at both twilights with red hue and halos are auspicious, and in Margashirsha a little cold and in Pausha the fall of snow are auspicious. In Magha month, strong fearful wind; Sun and Moon covered with frost and of dull lustre; intense cold; and the rising and setting of the Sun devoid of frost are auspicious. In Phalguna month, rough and fearful wind; the rise of clouds; the Sun and Moon clear and with unbroken halos; and a tawny or copper-colored Sun are auspicious. In Chaitra month, conception accompanied by wind, cloud, rain, and halo is auspicious. In Vaishakha month, conception accompanied by cloud, wind, water, lightning, and the thunder of clouds is auspicious.

Here says Kashyapa—
Marks of conception-time clouds—
If the conception-time clouds are white like pearls or silver, or very black like the tamala tree, the blue lotus, or collyrium, or lustrous like aquatic creatures, they give much rain. Pierced by very fierce solar rays and accompanied by little wind, conception-time clouds, on the 195th day (delivery time), pour torrents of rain as if angry.

In the Samasa-Samhita—
Mark of destruction of conception—
If during the conception period there are meteors, lightning, dust-rain, burning of the quarters, earthquake, aerial cities, cometary forms such as Nabhasa and Keelaka, planetary war, thunderous sounds, rains mixed with blood, flesh, fat, ghee, oil, and the like impurities; the appearance of the Parigha (as to the mark, see Chapter 49, verse 19); rainbow; Rahu; lunar or solar eclipse—these destroy conception.

Here says Parashara—
Special—
By the marks produced by the natures of the seasons (as stated in verses like “in Pausha and Margashirsha the twilights are red and the clouds are haloed,” etc.) and by the general marks (as stated in verses like “delightful winds from the north, gentle waters,” etc.) the conception increases; otherwise there is loss. ॥ 27 ॥

Combination, by conception-time Nakshatra, for abundant rain—
In all seasons, if the conception increases under any of these five Nakshatras—Purvabhadrapada, Uttarabhadrapada, Uttarashadha, Purvashadha, Rohini—there is abundant rain at delivery time. ॥ 28 ॥

Combination, by conception-time Nakshatra, for rain lasting many days—
Conception arising in Shatabhisha, Ashlesha, Ardra, Swati, or Magha Nakshatra remains strengthened for a long time; and in those five Nakshatras, for as many days as the conception is struck by the three kinds of portents (celestial, atmospheric, and terrestrial), for so many days rain does not fall.

Here says Garga—
Number of days in the aforesaid combinations—
If in any one of those five Nakshatras the conception increases in Margashirsha, then from the time of delivery there is rain for 8 days; in Pausha for 6 days; in Magha for 16 days; in Phalguna for 20 days; in Chaitra for 20 days; and in Vaishakha for 6 days.

Here says Rishiputra—
Regions of rain according to omens—
With the five omens (mentioned in verse 37 of this chapter), conception causes rain up to one hundred yojanas at the time of delivery. With four omens, up to fifty yojanas; with three omens, up to twenty-five yojanas; with two omens, up to twelve and a half yojanas; and with one omen, up to five yojanas. ॥ 31 ॥

Quantity of water according to conception endowed with omens—
Conception endowed with all five omens yields one drona of rain. Conception fallen by wind yields three adhakas; conception accompanied by lightning yields six adhakas; conception accompanied by clouds yields nine adhakas; and conception accompanied by the thunder of clouds yields twelve adhakas at delivery time.

For knowing the measures of the adhaka and the drona, says Parashara—
Here are special yogas for rain—
If the conception-time Nakshatra is joined with a malefic planet, the rain is accompanied by hail, thunderbolts, and fish. If there the Moon or the Sun is situated and joined with or aspected by benefic planets (Mercury, Jupiter, and Venus), the conception becomes one that gives much rain. ॥ 33 ॥

Special mark of conception—
If during the conception period there is excessive rain without omens, the conception is destroyed; and if the rain is for twenty-five palas or more, the conception flows away.

Chapter - 21 (continued)
Garbha-Kālika Nimitta (Omens during the Period of Conception)

Here a special note—
If a matured conception does not yield rain because of planetary affliction and other causes (celestial, atmospheric, and terrestrial), then during its second conception (that is, when conception occurs again), it produces rain mixed with hail. ॥ 35 ॥

Special illustration—
Just as milk of cows kept for a long time becomes thick, in the same way, when much time has passed, water becomes thick and appears in the form of hail. ॥ 36 ॥

Signs of conception-strength—
If the conception is accompanied by wind, water, lightning, sound of clouds, and clouds themselves, then at the time of delivery it produces much rain. During such a conception period, if there is already heavy rain, then at the time of delivery there is not much rain. ॥ 37 ॥

Chapter - 22
Atha Garbha-Dhāraṇa Adhyāya (Chapter on the Signs of Conception-Holding)

Signs of conception-holding—
From the eighth day of the bright half of Jyeshtha, for four days, are the days of conception-holding. During these days, wind pleasant to the touch, auspicious (arising in the north, northeast, or east) and a clear sky accompanied by clouds are auspicious. ॥ 1 ॥

Special in conception-holding—
If during the bright fortnight of Jyeshtha, there is rain in any of the four Nakshatras—Swāti, Vishākhā, Anurādhā, and Jyeshthā—then in the corresponding four months—Shrāvana, Bhādrapada, Ashvina, and Kārtika—there is drought respectively. That is, if there is rain in Swāti during Jyeshtha Shukla Paksha, drought occurs in Shrāvana; if in Vishākhā, then in Bhādrapada; if in Anurādhā, then in Ashvina; and if in Jyeshthā, then in Kārtika. ॥ 2 ॥

Here says Kāśyapa—
Further special mark—
If during those four conception-holding days the conditions are uniform, it is auspicious; if dissimilar, they bring fear from thieves. To confirm this meaning, the verses of Vasiṣṭha are written below.

Verses of Vasiṣṭha—
If during the conception-holding days there are wind mixed with lightning, water drops, and dust; if the Sun and Moon are covered with clouds; and if lightning appears in the north, northeast, or east direction, then the learned should declare increase of all grains.
If there is rain of dust, water, delightful play of children, sweet sounds of birds, their frolic in dust or water, and conception-holding days accompanied by smooth, spotless, and haloed Sun and Moon, then there will be rainfall ensuring the success of all grains.
If during the conception-holding days, clouds are smooth, dense, and moving circumambulating (from east to south, south to west, west to north, and north to east), then it is auspicious. ॥ 4–8 ॥

Chapter - 23
Atha Pravṛṣaṇa Adhyāya (Chapter on the Beginning of Rainfall)

Mark of the beginning of rainfall—
After the full moon of the bright half of Jyeshtha has passed, if there is rain in Purvashāḍhā and other Nakshatras, the measure of rain's auspiciousness or inauspiciousness should be declared; that is, if there is rain, it is auspicious; if there is none, it is inauspicious.

Here says Garga—
Measure of water—
Rainwater should be measured with a circular vessel having one hand's breadth in diameter and one hand's depth. When filled with rainwater, such a vessel holds fifty *pala* (equal to one *āḍhaka*). Fifty *pala* make one *āḍhaka*, and four *āḍhakas* make one *droṇa*. ॥ 2 ॥

In the Samāsa-Saṃhitā—
Measure of rainfall—
That rain by which dust on the Earth disappears or by which drops of water appear on the tips of grass should be taken as the standard of rain's measure. From this it is established that, among the Nakshatras beginning with Purvashāḍhā, whichever Nakshatra receives rain, rainfall

should be considered according to the measure mentioned (in the sixth verse of this chapter). ॥ 3 ॥

Difference of opinion regarding measure of rainfall—
Some sages (such as Kāśyapa and others) hold that if during the *Pravṛṣaṇa* period (the period after the full moon of Jyeshtha, extending through all twenty-seven Nakshatras beginning with Purvashāḍhā) rain occurs even in one region, then there is good rainfall in the rainy season.
Others (such as Devala and others) hold that if during the *Pravṛṣaṇa* period there is rain extending over at least ten *yojanas*, then there will be excellent rainfall in the season.
The opinion of Garga, Vasiṣṭha, and Parāśara is that if during the *Pravṛṣaṇa* period rain extends over twelve *yojanas*, then excellent rainfall occurs in the rainy season.

Here says Garga—
Still further—
If during the *Pravṛṣaṇa* period there is rain in any of the Nakshatras beginning with Purvashāḍhā, then at the time of delivery there is again rain in that very Nakshatra.
If during the *Pravṛṣaṇa* period there is no rain in any of the Nakshatras beginning with Purvashāḍhā, then during the time of delivery there is drought. ॥ 5 ॥

Measure of rainfall according to Nakshatras—
If during the *Pravṛṣaṇa* period there is rain in Hasta, Purvashāḍhā, Mrigashīrsha, Chitrā, Revati, or Dhanishthā Nakshatra, then at the time of delivery there will be sixteen *droṇas* of rainfall.
In Shatabhishā, Jyeshthā, and Swāti—four *droṇas*;
in Krittikā—ten *droṇas*;
in Shravaṇā, Maghā, Anurādhā, Bharanī, and Mūla—fourteen *droṇas*;
in Purvaphalgunī—twenty-five *droṇas*;
in Punarvasu—twenty *droṇas*;
in Vishākhā and Uttarāṣāḍhā—twenty *droṇas*;
in Āshleṣā—thirteen *droṇas*;
in Uttarabhādrapadā, Uttaraphalgunī, and Rohiṇī—twenty-five *droṇas*;
in Purvabhādrapadā and Pushya—fifteen *droṇas*;
in Ashvinī—twelve *droṇas*;
and in Ārdrā—if during the *Pravṛṣaṇa* period there is rain, then at delivery there will be eighteen *droṇas* of rainfall.

Special—
If the Nakshatra is free from afflictions, the rainfall should be understood to be according to the measure stated above.

In the Samāsa-Saṃhitā—
Here a special note—
If the Nakshatra is afflicted by the Sun, Saturn, Ketu, Mars, or by the three kinds of portents (celestial, atmospheric, and terrestrial), it causes inauspiciousness and absence of rain.

If, being free from affliction, the Nakshatra is joined with Mercury, Jupiter, or Venus, then prosperity and rain occur.

Chapter - 24

Atha Rohini-Yoga Adhyaya:

First, the presentation of the tradition—

Amidst a mass of golden stones, accompanied by the sounds of bees seated upon the flowers of trees, mixed with the songs of the Vidyādharas blended with the notes of various birds, and in the grove situated upon Mount Sumeru for Nārada, what Jupiter said, and for their own disciples what Garga, Parāśara, Kāśyapa, and Maya Asura said regarding the conjunction of the Moon with Rohiṇī, I am prepared to state by means of a few verses. ॥ 1–3 ॥

Time for considering the Rohiṇī-yoga—

In the dark half of Āṣāḍha, seeing the conjunction of Rohiṇī and the Moon, astrologers who ponder the planets should declare the good and evil of the world according to the method stated in the śāstra. Because what is past has no practical use, only the forthcoming Rohiṇī-yoga should be stated; this yoga I (Varāhamihira) have told in the Pañca-Siddhāntikā. By the measure of the Moon's disc, the Moon's lustre, the Moon's color, the Moon's path, various kinds of portents, and by the wind, the good and evil for the world should be told.

Pañca-Siddhāntikā:

Procedure in the Rohiṇī-yoga—

In the city, a Brāhmin should perform oblations, fasting for three days, in the northern or eastern direction. Thereafter, writing the nine planets beginning with the Sun together with the Nakshatras beginning with Aśvinī, he should worship them with incense, flowers, and offerings. Seated upon a *sthaṇḍila* covered with *kuśa* grass, with the four directions adorned by pitchers that are rootless (pitchers whose lower part lacks blackness due to fire-baking), covered with fresh leaves, worshipped in many ways, filled with jewels, water, and herbs.

Here says Garga—

Arrangement of pitchers and the homa—

Then, placing in the pitchers all seeds consecrated with the mantra called *Mahāvrata*, he should fill them with water accompanied by gold and *kuśa*; and he should offer oblations with the mantras of Wind, Varuṇa, and the Moon. ॥ 8 ॥

Examination of the wind by means of a flag—

On a bamboo twelve cubits high he should tie a flag thin and of staff-measure (four cubits long). First determining the directions, at the time when the Moon is in Rohiṇī-yoga he should ascertain by that flag from which quarter the wind is blowing. ॥ 9 ॥

Results from the wind—

There, for the sake of rain, one should conceive a fortnight from a *prahar*, and a day from a fraction of a *prahar*. That is, on the day of the Moon being in Rohiṇī, from sunrise to the next

sunrise, out of the eight *prahars*, beginning from the first *prahar*, one should test the wind by the established flag. “If in the first *prahar* of the day a fine wind blows, then in Śrāvaṇa Kṛishna there is fair rain; if it blows in the second *prahar*, then in Śrāvaṇa Śukla; if the wind blows in the third *prahar*, then in Bhādra Kṛishna; if it blows in the fourth *prahar*, then in Bhādra Śukla; if in the first *prahar* of the night the wind blows, then in Āśvina Kṛishna; if in the second *prahar* it blows, then in Āśvina Śukla; if in the third *prahar* it blows, then in Kārttika Kṛishna; and if in the fourth *prahar* a fine wind blows, then in Kārttika Śukla there is fair rain. If from sunrise up to half a *prahar* a fine wind blows, then in Śrāvaṇa Kṛishna, etc., there is rain for seven and a half days; in its half period, for four and a quarter days, etc., rain should be said.” Some take a month in place of a fortnight; therefore, in place of half a *prahar* one should take a fortnight, and in place of its half, seven and a half days, etc. If the flag moves turning to the left (*savya*), it is always auspicious. From that wind which is steady one should declare the good and evil result.
And here says Ṛṣiputra—

Results by the sprouting of seeds—
At the time when the Moon is in Rohiṇī, among the seeds placed in the pots, in proportion as they sprout, so much increase of those very things occurs in that year. ‖ 11 ‖

Auspicious omens at the time of Rohiṇī-yoga—
Directions resounding with tranquil, sweet-speaking birds and wild animals, a clear sky, and a fine wind are auspicious. Now thereafter the results of clouds and wind are stated.
Here says Garga—

Auspicious combinations at the time of Rohiṇī-yoga—
A sky accompanied by clouds like serpents whose coils are turned toward the belly so that only the back is visible; thus in some places black-and-white, in some places only white, in some only black; with tongues like shining lightning and vast; with lustre pure like the inside of a blossomed lotus; with lustre at the edges like red; and with lustre pure like bees, saffron, and flowers—such clouds at the time of Rohiṇī-yoga are auspicious. ‖ 13–14 ‖

Further auspicious combinations at the time of Rohiṇī-yoga—
A sky of variegated color because of lightning, rainbows, and black clouds—like a forest distressed by wild-fire, elephants, and buffaloes—is auspicious at the time of Rohiṇī-yoga. ‖ 15 ‖

Still further auspicious combinations at the time of Rohiṇī-yoga—
Or a sky accompanied by clouds black like the dark stones of Mount Añjana; or by clouds that steal the lustre of snow, pearls, conch, and moonbeams (white clouds)—is auspicious at the time of Rohiṇī-yoga. ‖ 16 ‖

Still further auspicious combinations at the time of Rohiṇī-yoga—
A sky filled with clouds like an elephant black as a bee; with lofty banners like a strange rainbow; with a middle-belt like a jeweled girdle (lightning); with front teeth like a row of swans; with streaming water like ichor; and with moving foreparts like hands—such is auspicious at the time of Rohiṇī. ‖ 17 ‖

Description of clouds—
In which sky there are clouds tinged with the color of twilight, like blue lotuses, as if stealing the lustre of Lord Viṣṇu clad in yellow garments. ॥ 18 ॥

Further description of clouds—
Clouds of sweet sound accompanied by the cries of peacocks, chatakas, and frogs; hanging to the horizon while filling the sky; and pouring much rain upon the Earth. ॥ 19 ॥

Determination of results—
If for three or two days the sky is accompanied by clouds of the aforesaid forms, there is plenty, men are joyful, and there is abundant rain upon the Earth.
Samāsa-Saṃhitā:

Marks and results of inauspicious clouds—
Clouds that are rough, scanty, driven by wind, with lustre like that of a camel, crow, corpse, monkey, or other despised creatures (dog, cat, rakshasa, etc.), and without sound—these are inauspicious and cause drought.

Here says Garga—
Marks and results of auspicious clouds—
If in a cloudless sky the Sun's rays are sharp, and at night the sky is like a lake filled with blooming lilies with clear stars, then there is fair rain. ॥ 22 ॥

Results of clouds according to the division of directions—
From clouds arising in the east, there is excellent production of grain; from those arising in the southeast, fear of fire; from those arising in the south, destruction of grain; from those arising in the southwest, half production of grain; from those arising in the west, fair rain; from those arising in the northwest, wind-accompanied rain here and there (not everywhere); from those arising in the north, full rain; and from those arising in the northeast, excellent grain. The result of wind should be understood similarly according to the directions. ॥ 23–27 ॥

Marks and results of portents—
At the time of Rohiṇī-yoga, according to the directions, the results of meteors, lightning, burning of quarters, sounds in the sky, earthquakes, and the cries of birds and wild animals should be declared just like the results of clouds according to the directions (as stated in the verses beginning "from those arising in the east there is production of grain," etc.). ॥ 25 ॥

Results from establishing pitchers in the four directions—
On the day of Rohiṇī-yoga, if there is rain, in the four directions beginning with the north, in circumambulatory order, one should set up four pots inscribed with the names of the four months beginning with Śrāvaṇa. That month whose pot becomes filled with water will be the month giving results; if all water runs out from the pot, there will be drought; and if there is a little water, then one should, by one's judgment, conceive the measure of rain in proportion—e.g., half in half, a quarter in a quarter, etc.

Here says Garga—
When there is rain at the time of Rohiṇī-yoga, in the four directions beginning with the north, in circumambulatory order, one should set up, as before, four pots inscribed with the names of the kings, countries, and the four classes beginning with Brāhmins situated in those directions beginning with the north. Thereafter, of the direction whose pot is destroyed, the king, country, and classes of that direction perish; of the direction whose pot lets all water flow out, there is calamity among the kings, etc., of that direction; of the direction whose pot retains a little water, the kings, etc., of that direction obtain medium results; and of the direction whose pot is filled with water, the kings, etc., of that direction obtain very auspicious results.

Here says Kashyapa -
Result of the Moon's conjunction going south with Rohini—
If the Moon, being either far or near, conjoins Rohini going to the south, it makes the world miserable. ॥ 28 ॥

Result of the Moon's conjunction going north with Rohini—
If, touching Rohini on the south, the Moon moves to the north, there is fine rain and many kinds of disturbances among the people. If, not touching Rohini, the Moon moves to the north, there is fine rain and it becomes beneficial for the people. ॥ 29 ॥

Result of the Moon situated in the middle of Rohini's cart—
If, being situated in the middle of the Rohini cart (Rohini is called a cart because it has six stars), the Moon moves, the people (subjects), lacking refuge, asking for food for their children, drinking water exceedingly heated by the Sun's rays, move to uncertain places. (In Brahma-Siddhānta the mark of breaking the cart: "Vikṣepo 'nśa-dvitayād adhiko—vṛṣabhasya saptadaśa bhāge | yasya grahasya yāmyaḥ bhinatti śakaṭaṃ sa rohiṇyāḥ.") ॥ 30 ॥

Result of the Moon positioned to the west of Rohini—
If first the Moon rises and afterwards Rohini rises to the west of the Moon and moves, there are many kinds of auspicious events among the people, and lustful women become subject to their husbands. ॥ 31 ॥

Result of the Moon positioned to the east of Rohini—
Just as a passionate man goes behind his beloved woman, in the same way, if the Moon moves behind Rohini, men, troubled by the arrows of love, become subject to women. ॥ 52 ॥

Result when the Moon is situated in the southeast, etc., of Rohini—
In the year in which the Moon is situated in the southeast of Rohini, there are many disturbances; if the Moon is situated in the southwest, then the destruction of grain, being afflicted by excessive rain and such calamities; if the Moon is situated in the northwest, then there is medium grain; and if the Moon is situated in the northeast, then in that year there are many good qualities such as low prices of grain and fine rain.

Samāsa-Saṃhitā—
Result of the yogatārā being pierced or covered—
If the Moon pierces (touches at one horn) Rohini's yogatārā, or covers it with its own disc, then by piercing there is severe fear, and by covering, the king dies through a woman.

Mark of the yogatārā—

Results dependent on cattle—auspicious and inauspicious—
If, at the time of cow-entry (western twilight), among the cattle coming from the forest there goes in front a bull or a black animal, then in that year there is much rain. If a variegated (black-and-white) animal goes in front, then the result is medium; if the blackness is more, then rain; if the whiteness is more, then little rain; and if there is only whiteness, then drought.

Here says Garga—
Result of the invisible Moon—
If at the time of Rohini-yoga the Moon is not seen in a sky covered by clouds, then in that year there is great fear of disease, and the Earth is endowed with much grain and rain. ॥ 36 ॥

Chapter - 25
Atha Swati-Yoga Adhyaya:

First, like in Rohini-yoga, the declaration of results and the specification of time—
Just as all the results stated in Rohini-yoga, so in the bright half of Ashadha one should consider all the results of the Moon situated in the Nakshatra Swati; and the special results therein I state.

Here says Parashara—
Result of increase in the three parts of night and day—
At the time when the Moon is situated in its lord Nakshatra, divide both night and day into three parts; if rain occurs in the first part of the night, there is increase of all grains; in the second part, increase of sesame, mung, and urad; in the third part, production of summer grains and absence of autumnal grains; if rain occurs in the first part of the day, there is fine rain; in the second part, rain accompanied by worms and snakes; and in the third part, if there is rain, it is moderate rain. If there is rain throughout the whole day and night, then in the rainy season there is faultless rain.

Here says Garga—
Result of the Moon situated near the star Apāṃvatsa—
To the north of Chitra there is a star named Apāṃvatsa; if near it there is the conjunction of the Moon with Swati, it is auspicious. ॥ 4 ॥

Result of Swati-yoga—
If, at the time when the Moon is in the Nakshatra Swati on Magha Krishna Saptami, snow falls, fearful wind blows, clouds with water roar, the sky is filled with halo-phenomena, and because of being cloud-covered the Moon, Sun, and stars are not seen, then in the rainy season the country is joyful and endowed with all grains. ॥ 5 ॥

Further auspicious and inauspicious results of Swati-yoga—
In the same way, one should consider Swati-yoga in the dark halves of Phalguna, Chaitra, and Vaishakha; but in the month of Ashadha this (Swati-yoga) should be considered especially. ॥ 6 ॥

Chapter - 26
Atha Ashadhi-Yoga Adhyaya:

Condition of grains by the measure of grains in Ashadhi-yoga—
On the day of the bright full moon of Ashadha, at the time when the Moon is in Uttarashadha Nakshatra, let him weigh separately, with an enchanted scale, all grains equally and set them aside; on the next day weigh all of them again: that grain which has increased has increase in that year, and that which has decreased suffers loss. Here is the mantra for enchanting the scale.
Samāsa-Saṃhitā—

Here the archaic mantra—
By the power of mantra one should worship the goddess Sarasvati, the embodiment of Truth. O Truth-formed Sarasvati! The ultimate Reality can be shown only by you, for you are endowed with the vow of Truth. By that Truth by which the Moon, Sun, and the planets beginning with Mars and the Nakshatra hosts rise in the east and set in the west; the Truth which is in all the Vedas; the Truth which is among the speakers of Brahman; and the Truth which is in the three worlds—show that. You are the daughter of Brahma, yet you are called Āditya (daughter of Aditi); by lineage you are of the Kāśyapa gotra, and you are renowned by the name of the Scale (Tula). ॥ 2–5 ॥

Mark of the scale—
Bind on each pan's cloth (the two pan-cloths) four cords measuring four fingers, to make cloths of six fingers' extent, and bind between the two pans a beam (*kakṣyā*) measuring six fingers. ॥ 6 ॥

Knowledge of rain from the measure of substances—
On the southern pan place gold, and on the northern pan place, along with water from a well, river, or lake, the remaining substances. If, compared with the first day, on the second day the water of the well increases, there is drought; if the water of the river increases, there is moderate rain; and if the water of the lake increases, there is excellent rain. By the measure of elephant tusk, of the hairs of cow, horse, etc. (donkey, camel, goat, and sheep) respectively of all those, by gold of the king, by wax of the four classes beginning with Brahmin, by the country, year, month, and directions, and by their respective measures of the remaining substances, one should know the auspicious and inauspicious. ॥ 7–8 ॥

Mark of the scale—
The scale-beam should be of gold as the best, of silver as the middle, and in the absence of these two one should make the beam of *khair* wood; or the beam should be made from the

arrow by which some man has been pierced. That beam should be of twelve fingers' measure. ॥ 9 ॥

Auspicious and inauspicious result of the weighed substances—
If on the second day the weighed substance is less, then in that year there is its destruction; if more, increase; and if equal, the result is medium. This most secret mystery of the scale I have declared. Consider it also in the time of Rohini-yoga.

And also Parashara—
Auspicious and inauspicious results from the conjunction of a malefic planet—
If with the Moon in Swati, Uttarashadha, or Rohini there is conjunction of a malefic planet (Mars, Saturn, Rahu, or Ketu), it is not auspicious.

Here says Garga—
The special authority of Rohini-yoga among the three yogas—
If the results of the three (Rohini, Swati, and Ashadhi) yogas, or the results of two yogas, are the same, then without doubt that very result should be declared. If the three have different results, then in most cases the result of Rohini-yoga should be declared for that year. ॥ 12 ॥

Result of wind according to directions—
At the times of the aforesaid three yogas, if the wind of the east blows, there is excellent production of grain; if of the southeast, there is fear of fire; if of the south, little rain; if of the southwest, moderate rain; if of the west, excellent rain; if of the northwest, much rain; if of the north, fine rain; and if of the northeast, excellent rain. ॥ 13 ॥

Result of Ashadha Krishna Chaturthi—
If on the day of Ashadha Krishna Chaturthi the clouds rain in Purvashadha Nakshatra, then in that year the rain is good; if they do not rain, there is drought. ॥ 14 ॥

Result of the Ishana wind on the full moon of Ashadha—
If on the full-moon day of Ashadha, at the time of sunset, the wind of the northeast blows, then grain on Earth becomes excellent. ॥ 15 ॥

Chapter – 27
अथ वातचक्राध्यायः **(Vata Chakra Adhyaya – Chapter on the Circle of Winds)**

Result of the Eastern Wind –
On the day of the Āṣāḍha bright full moon, when the wind, moving from the crest of the waves of the eastern ocean, revolving and adorned with the locks in the form of the rays of the Sun and the Moon, blows from the sky, in that year, the entire earth, endowed with blue-colored clouds, enriched with the prosperity of autumnal grains, and adorned with the abundance of vernal crops, becomes beautiful. ॥1॥

Result of the South-Eastern Wind –
If, on the day of the Āṣāḍha bright full moon at the time of sunset, an unobstructed-moving wind from the south-eastern direction blows, then in that year the earth, covered with blazing flames

of fire, emits ashes through her heated breath, i.e., there is absence of rain, fear of fire, destruction of people, and other calamities occur. ॥2॥

Result of the Southern Wind –
In this combination, if on the day of the Āṣāḍha bright full moon at sunset, a harsh-sounding wind from the south blows, causing the movement of palm leaves, creepers, and shaking monkeys on the trees, then the clouds, like an elephant struck by a palm-leaf goad, drop only a few drops of water like a miserly person; that is, there is little rainfall in that year. ॥3॥

Result of the South-Western Wind –
In this combination, if on the day of the Āṣāḍha bright full moon at sunset, near the ocean, the wind from the south-west direction blows, shaking the trees of small cardamom, lavali, and clove, then the earth, burdened with the spreading pieces of bones of men dead from hunger and thirst, appears like a maddened, excessively restless demon-bride. ॥4॥

Result of the Western Wind –
In this combination, if on the day of the Āṣāḍha bright full moon at sunset, a fierce and restless wind blows, scattering dust and saffron powder, then in that year, the earth becomes filled with grains, pervaded by wars of kings, and everywhere continuously covered with fat, flesh, and blood. ॥5॥

Result of the North-Western Wind –
In this combination, if on the day of the Āṣāḍha bright full moon at sunset, a dense-bodied wind (due to the conjunction with dust and being widespread) from the north-west direction blows, resembling fragments of serpents, then in that year the earth, delighted with streams of water, filled with loudly croaking frogs, and adorned with marks in the form of sprouting grains, should be considered prosperous like a fortunate army. ॥6॥

Result of the Northern Wind –
At the end of summer, on the Āṣāḍha bright full moon day, when the Sun's rays are veiled by Mount Meru, if the northern wind blows at sunset, fragrant with the scent of Kadamba flowers, then in that year, the clouds, intoxicated by the awareness of all the brilliance produced by lightning, fill the earth, whose moonlight has been destroyed by the clouds, with water. ॥7॥

Result of the North-Eastern Wind –
If on the Āṣāḍha bright full moon day at the time of sunset, a cool, terrible-sounding wind from the north-east direction blows, suitable for the enjoyment of gods and fragrant with the flowers of Punnāga, Aguru, and Pārijāta, then in that year, the earth is endowed with full watery youth and filled with ripened grains. Righteous kings who have subdued their enemies protect the Brāhmaṇas and other castes in proper manner. ॥8॥

Non-Rishi Verse –
If the sky is not devoid of the rays of the Moon and the Sun and of stars, then it should not be called Bhādrapada, because in that (month) the clouds do not rain. ॥9॥

Chapter – 28
Sadyovarshaṇa Adhyaya – Chapter on Immediate Rainfall

Knowledge of Rain from the Moon's Position in Rain Query –
If, during the dark fortnight, the Moon being in a watery sign occupies the ascendant, or during the bright fortnight, being in a watery sign, occupies a Kendra (4th, 7th, or 10th house), and in both these combinations if the Moon is aspected by benefic planets, then soon there will be much rain; but if aspected by malefic planets, then there will be little rain. ॥1॥

Knowledge of Rain from the Querent's Actions –
If in the rain query, the querent touches wet objects, water, or objects symbolizing water (like milk, lotus, etc.), or stands near water, or is engaged in work related to water, or hears the word "water" from someone else, then rain occurs soon without doubt. ॥2॥

Knowledge of Rain from the Rays of the Sun –
At the time of rain, when the Sun, stationed on the rising mountain, has such sharp rays that it is very difficult to behold, resembling melted gold and shining like a pure vaidurya gem, then it rains on that very day; and when at midday the Sun has extremely sharp rays, then also it rains. ॥3॥

Other Indications of Rain –
Tasteless water, sky resembling a cow's eye or a crow's egg, clear directions, salt becoming moist, cessation of wind, fishes jumping from water into dry places, frogs croaking repeatedly—these are all causes of rain. ॥4॥

Further Indications of Rain –
If a cat scratches the ground repeatedly with its claws, or excrement becomes mixed with the smell of raw flesh on metals, or a bridge made by children is seen on the path, then it should be said that rain will occur soon. ॥5॥

Further Indications of Rain –
If mountains appear like collyrium powder, caves are filled with vapor, or the Moon's rays are blood-red like the eyes of a waterfowl, then soon there will be rain. ॥6॥

Further Indications of Rain –
If ants without reason carry their eggs from one place to another, serpents copulate, serpents climb trees, or cows leap without reason, then soon there will be rain. ॥7॥

Rain Indicated by Chameleon, etc. –
If a chameleon, sitting on the top of a tree, looks toward the sky, and cows lift their eyes and look at the Sun, then soon there will be rain. ॥8॥

Knowledge of Rain from the Behavior of Animals –
If animals do not wish to go out of the house and move their ears and legs, then rain should be predicted. If they behave like floating on water in fear, rain should also be said. ॥9॥

Knowledge of Rain from the Behavior of a Dog –
When a dog, sitting on the roof of the house, looks toward the sky and barks, and lightning appears in the north-east direction, then the earth becomes as if covered with water, i.e., there is much rain. ‖10‖

Knowledge of Rain from the Moon –
When the Moon is like the eyes of a parrot or pigeon, or like honey, or when another Moon is seen in the sky, then soon there will be rain. ‖11‖

Knowledge of Rain from the Thunder of Clouds, etc. –
If at night there is thunder of clouds, or in daytime a rod-like lightning resembling blood appears, and a cold wind from the east blows, then the arrival of rain occurs. ‖12‖

Knowledge of Rain from Creepers, etc. –
If new leaves of creepers are upward facing, or birds bathe in water or dust, or reptiles (such as snakes) stay at the tips of grasses, then soon there will be rain. ‖13‖

Knowledge of Rain from the Color of Evening Clouds –
If clouds have a luster like peacock, parrot, blue jay, chataka, hibiscus, or lotus, and shapes resembling whirlpools of water, mountains, crocodiles, tortoises, pigs, or fishes, then they rain soon. ‖14‖

Knowledge of Rain from the Clouds –
If in the east there arise clouds which are white like lime or the Moon all around, having a middle shining like soot or bees, pure, releasing drops of water above, and arranged like steps, moving from east to west or from west to east, then soon they cause much rain on earth. ‖15‖

Knowledge of Rain from Seeing Rainbow, etc., at Sunrise or Sunset –
If at sunrise or sunset a rainbow, parigha (mentioned in Chapter 47, verse 19), a second Sun, rohita (Chapter 47, verse 20), or the halo of Sun or Moon is seen, then soon there will be abundant rain. ‖16‖

Knowledge of Rain from the Color of the Sky, etc. –
If at sunrise or sunset the sky appears like the wings of a partridge and birds sing joyfully, then soon there will be abundant rain—by day if these signs occur at sunrise, and by night if they occur at sunset. ‖17‖

Knowledge of Rain from the Rays of the Sun –
If the rays of the Sun appear like a thousand (needles), infallible (as mentioned in Chapter 30, verse 11), elevated like the hand of the setting mountain, and clouds roar near the earth, then it is an excellent indication of rain. ‖18‖

As said by Parashara –

Knowledge of Rain from the Positions of Planets –
If during the rainy season, the Moon, being seventh from Venus, is aspected by benefic

planets, or being fifth or ninth from Saturn is aspected by benefic planets, then it causes the coming of rain. ॥19॥

Other Combinations for Rain –
At the rising or setting of planets, at the conjunction with the Moon, at entering the mandala (the six mandalas of Shukra), at the end of the fortnight, at the end of the Sun's southern or northern course (Cancer and Capricorn solstices), and when the Sun is in the Ārdrā constellation—certainly there will be rain. ॥20॥

Result from the Conjunction of Two Planets –
If there is a conjunction of Mercury-Venus, Mercury-Jupiter, Jupiter-Venus, or Saturn-Mars, and no aspect or conjunction of benefic planets upon them, then there is fear of wind and fire. ॥21॥

Knowledge of Rain from Planetary Motion –
If from the Sun, the slow-moving planets are ahead and the fast-moving planets are behind, then they make the earth full of water like the ocean. ॥22॥

Knowledge of Rain from Fireflies –
If at night fireflies go near the clouds, then soon the clouds cause rain that fills the fields of grain. ॥23॥

Knowledge of Rain from the Howling of Jackals –
If it rains at twilight or jackals howl, then certainly for seven days there will be bad weather and rain. ॥24॥

Chapter – 29

अथ कुसुमलताध्यायः **(Kusuma-Latā Adhyaya – Chapter on Flowers and Creepers)**

Purpose of this Chapter—
By observing the increase of fruits and flowers on trees, the availability of commodities and the production of grains should be known. ॥ 1 ॥

Result of the Increase of Certain Trees and Plants—
From the increase of fruits and flowers on the Śāla tree, there is increase of *Kalam Śālī* (root-grown grains, etc.);
from Rakta Aśoka, increase of red grains;
from Dūdhī, increase of Pāṇḍūka;
and from the increase of fruits and flowers on Nīla Aśoka, increase of Sūkaraka (a special grain). ॥ 2 ॥

Result of the Growth of Barley and Other Grains—
From the Vaṭa (banyan) tree, increase of barley (Yava);

from Tinduka (tendu), increase of *Sāṭhī* grain;
and from the Pīpala tree, increase of all grains. ॥ 3 ॥

Result of the Growth of Sesame, Black Gram, and Other Grains—
From Jāmun, increase of sesame (Til) and black gram (Māṣa);
from Śirīṣa, increase of Priyaṅgu (Kakunī or Kaunī);
from Mahuā, increase of wheat;
and from the Saptaparṇa tree, increase of barley (Yava). ॥ 4 ॥

Result of the Growth of Cotton and Other Crops—
From the increase of fruits and flowers in the Vāsantī creeper and Kunda flowers, increase of cotton;
from Asanā, increase of mustard;
from Ber, increase of Kulthī;
and from Karañja, increase of green gram (Moong). ॥ 5 ॥

Result of the Growth of Flax and Other Crops—
From Vetasa tree, increase of flax (Alasī or Tīsī);
from Palāśa, increase of Kodo grain;
from Tilaka, increase of conch, pearl, and silver;
and from Iṅgudī trees, increase of hemp (San). ॥ 6 ॥

Result of the Growth of Elephants, Horses, and Other Creatures—
From the Hastikarṇa tree, increase of elephants;
from Aśvakarṇa, increase of horses;
from Pāṭalā, increase of cows;
and from the Kadalī tree, increase of goats and sheep. ॥ 7 ॥

Result of the Growth of Gold and Precious Substances—
From the increase of the Campā flower, increase of gold;
from Bandhujīva, increase of coral;
from Kuravaka, increase of diamond;
and from Nandikā-vartta, increase of vaidūrya gem (cat's eye). ॥ 8 ॥

Result of the Growth of Saffron and Similar Substances—
From Sindhuvāsa, increase of pearls;
from Kusumbha, increase of Kedāra;
from red lotus, increase of kings;
and from blue lotus, increase of ministers. ॥ 9 ॥

Result of the Growth of Merchants and Others—
From Suvarṇa flower, increase of merchants;
from lotus, increase of Brāhmaṇas;
from Kumuda, increase of family priests;

from fragrant substances, increase of commanders;
and from Āka, increase of gold. ॥ 10 ॥

Result of the Growth of Mango and Other Trees—
From mango, welfare of men;
from Bhallātaka, fear;
from Pīlu, health;
from Khaira and Śamī, famine;
and from Arjuna tree, beautiful rainfall. ॥ 11 ॥

Result of the Growth of Certain Flowers and Trees—
From Nimba and Nāgakesara, prosperity;
from Kapittha, wind;
from Nichula, fear of drought;
and from Kuṭaja, fear of disease. ॥ 12 ॥

Result of the Growth of Grass and Creepers—
From Dūva and Kuśa, increase of sugarcane;
from Kacanar, fire;
and from Śyāma creeper, increase of prostitutes and adulterous women. ॥ 13 ॥

Result from the Leaves of Trees—
When the leaves of trees, shrubs, and creepers appear smooth and without holes, there is beautiful rainfall;
if they are rough and perforated, rainfall is scanty.

Chapter – 30

अथ सन्ध्यालक्षणाध्यायः **(Sandhyā-Lakṣaṇa Adhyaya – Chapter on the Characteristics of Twilight)**

Definition of Twilight—
After the Sun's disc is half-set, until the stars are not clearly visible in the sky, is one twilight (evening twilight);
and after the stars have slight luster, until the Sun's disc is half-risen, is the second twilight (morning twilight).
Its results are described according to the signs observed.

Objects Serving as the Basis of Results—
According to Garga, the behavior of forest-dwelling animals, birds, wind, the halos around the Sun and Moon, the counter-sun, parigha, cloud-lines, tree-shaped clouds, rainbow, city of the Gandharvas, the rays of the Sun, the staff (union of sunlight, water, and wind), and dust—
from their conditions and the rainfall occurring at twilight, the results should be predicted. ॥ 2 ॥

Result from the Behavior of Deer—
A deer making loud and terrible sounds repeatedly indicates destruction of villages.
If, situated on the southern side of the army and facing the Sun, it cries loudly, it destroys armies. ‖ 3 ‖

Further Result from the Behavior of Deer—
If, at twilight, deer or wind are on the left side of the army facing the Sun, there is battle;
if on the south, not facing the Sun, there is union of armies;
and if on both sides, there is rainfall. ‖ 4 ‖

Result of Twilight with the Sound of Deer and Birds—
Morning twilight accompanied by the sounds of deer and birds facing the Sun brings destruction to the country;
and twilight accompanied by the sounds of deer and birds facing the Sun in the southern direction causes capture of the city by enemies. ‖ 5 ‖

Result of the Wind at Twilight—
The wind which shakes houses, trees, and gateways, is filled with dust and clods, strong, terrible, harsh, and causes birds to fall from the sky—
such wind at twilight is inauspicious. ‖ 6 ‖

Auspicious Twilight—
Twilight accompanied by trees whose leaves gently tremble by mild breeze, or by calmness without wind, or by sweet-sounding, peaceful birds and deer, is auspicious. ‖ 7 ‖

Result of Certain Phenomena at Twilight—
Cloud in the form of a staff, lightning, fish-shaped cloud, counter-sun, parigha, rainbow, Airāvata (as mentioned in Chapter 47, verse 20), and the rays of the Sun—
if these appear clear at twilight, they bring rainfall. ‖ 8 ‖

Result from the Sun's Rays at Twilight—
If at twilight the Sun's rays are broken, irregular, colorless, distorted, crooked, encircling counterclockwise, minute, small, powerless, and impure,
they cause mutual enmity among men and produce rainfall. ‖ 9 ‖

Result from the Excellent Rays of the Sun—
If in a sky without darkness, the Sun's rays are bright, clear, distinct, long, and encircling in rightward (southward) order,
they promote the welfare of the world. ‖ 10 ‖

Result of the Amogha Rays—
The rays of the Sun that pervade the entire sky, are clear, unbroken, and distinct, are called *Amogha* (infallible and auspicious). ‖ 11 ‖

Further Result of Sun's Rays—
If the Sun's rays appear variegated (mixed of yellow, white, and black), slightly yellow, yellow,

strange, green like madder, mixed of black and white, and spread across the whole sky, then from the seventh day after that, they cause rain and a little fear. ॥ 12 ॥

Result of Coppery and Other-Colored Rays—
If the Sun's rays are copper-colored, they cause the death of the commander;
if yellow and red together, affliction to the commander;
if green, destruction of cattle and grain;
if smoke-colored, destruction of cows;
if madder-colored, fear from weapons and fire;
if yellow, rainfall accompanied by gusts of wind;
if ash-colored, drought;
if white, black, blue, and yellow mixed, there is very little rain. ॥ 13–14 ॥

Result of Dust at Twilight—
If dust, resembling the Bandhūka flower or collyrium, moves toward the Sun, people suffer from hundreds of diseases;
if white-colored dust moves toward the Sun, it brings prosperity and peace to the people.

अथ सन्ध्यालक्षणाध्यायः **(Sandhyā-Lakṣaṇa Adhyāya – Chapter on the Characteristics of Twilight)**

According to Parāśara — when the rays of the Sun, clouds, and wind unite and stand together like a staff, that form is called *Daṇḍa*. If this Daṇḍa appears in the corners, it causes evil to kings, and if it appears in the directions, it causes inauspiciousness to the four castes. ॥ 16 ॥

If this Daṇḍa is seen at sunrise, midday, or sunset, it causes fear of weapons and calamities. If it is white in color, it brings destruction to the Brāhmaṇas; if red, to the Kṣatriyas; if yellow, to the Vaiśyas; and if black, to the Śūdras. It also destroys the direction toward which it appears. The part near the Sun is its root, and the other end is its mouth. ॥ 17 ॥

If clouds, having a front part like curd, covering the Sun with their blue portions, standing in the middle of the sky, yellow-tinted and dense at the root, appear in the form of a tree, they cause abundant rainfall. ॥ 18 ॥

If a king who has set out to attack his enemy and desires victory proceeds onward, and at that time a cloud-tree behind him at some distance is destroyed, that king dies; and if that cloud-tree appears small like a sapling, the crown prince and ministers die. ॥ 19 ॥

If, at twilight, the radiance resembles the luster of a blue lotus, a vaidūrya gem, or the pollen of a lotus, is without wind and illuminated by the Sun's rays, then on that very day it rains. ॥ 20 ॥

If twilight is joined with a Gandharva-city, frost, smoke, or dust, it causes drought in the rainy season and anger of weapons (war) in other seasons. ॥ 21 ॥

If in winter the twilight is red, in spring yellow, in summer white, in the rainy season variegated, in autumn like a lotus, and in the Hemanta season blood-colored, then the result is auspicious; otherwise, it is inauspicious. ॥ 22 ॥

According to Garga — if at twilight a cloud fragment appears like a man holding a weapon, it indicates fear from enemies. If a Gandharva-city, white in color and covered by the Sun, is seen, there is gain of the city; and if that Gandharva-city is pierced by the Sun, it indicates destruction of the city. ॥ 23 ॥

If white and bright-rayed clouds or those with the luster of a bull arise in a calm direction and cover the southern part of the Sun, they bring rain. ॥ 24 ॥

If at sunrise a cloud-line appears white in color, it brings destruction of the king; if red, destruction of the army; and if shining like gold, it brings increase of the armies. ॥ 25 ॥

If halos appear on both sides of the Sun, there is abundant rainfall; but if the halo extends and encircles all directions, not even a single drop of water falls — meaning drought occurs. ॥ 26 ॥

If, at twilight, red-colored clouds in the shapes of banners, umbrellas, mountains, elephants, or horses are seen, they signify war. If clouds resembling straw or smoke, with clear bodies, appear, they cause the increase of royal armies. If at both twilights clouds appear hanging like trees, shining with deep red hues and resembling a city, they are auspicious. ॥ 27–29 ॥

If, at twilight, birds, jackals, and deer facing the Sun make sounds, or if Daṇḍa, dust, Parigha, rainbow, Gandharva-city, frost, or an impure or distorted Sun is seen daily, such twilight destroys the country, the king, and prosperity. ॥ 30 ॥

According to Kāśyapa — the morning twilight gives its result immediately; the evening twilight within the night or within three days. The halo, dust, Parigha, Amogha rays of the Sun, rainbow, counter-Sun, clouds, and wind give their results at once or within seven days. Birds give their result at once or within eight days, and deer within seven days, producing auspicious or inauspicious effects. ॥ 31 ॥

Twilight gives results only to the distance that it illuminates. Lightning extends its light up to six yojanas and gives effect within that range; thunder of clouds is heard up to five yojanas and gives results within that distance. Some teachers such as Devala say that in the case of a meteor fall there is no fixed region, for its result extends everywhere. ॥ 32 ॥

According to Devala — the counter-Sun halo (*Pratisūrya*) extends up to three yojanas, the Parigha up to five yojanas, the encircling halo (*Pariveṣa-chakra*) up to five or six yojanas, and the rainbow up to ten yojanas; each produces effects within the same extent. ॥ 33 ॥

Chapter – 31

अथ दिग्दाहलक्षणाध्यायः **(Dig-Dāha-Lakṣaṇa Adhyāya – Chapter on the Signs of Burning of the Directions)**

If the burning of the quarters (Dig-dāha) is yellow in color, it brings fear from kings; if fiery red, it causes destruction of the country; and if a red wind appears on the left side, it causes destruction of grains. ॥ 1 ॥

That Dig-dāha which shines with excessive brilliance and illuminates even the shadow of visible objects like the Sun causes great fear to the king. If it is red in color, it indicates fear from weapons. ॥ 2 ॥

If the Dig-dāha appears in the east, it afflicts the king along with all Kṣatriyas. If it appears in the southeast, it afflicts artisans (smiths, goldsmiths, etc.) and potters. If in the south, it afflicts cruel men, Vaiśyas, messengers, and remarried women (*Punarbhū*). A Punarbhū woman is she who, having an unbroken virgin passage, marries again. If it appears in the west, it afflicts Śūdras and farmers. If in the northwest, it afflicts horses and thieves. If in the north, it afflicts Brāhmaṇas. And if in the northeast, it afflicts heretics and merchants. ॥ 3–4 ॥

According to Kāśyapa — if the sky is clear, the stars are bright, the wind moves rightward (southward), and the Dig-dāha is golden in color, it brings welfare to the king and to all people. ॥ 5 ॥

Chapter – 32

अथ भूकम्पलक्षणाध्यायः **(Bhūkampa-Lakṣaṇa Adhyāya – Chapter on the Signs of Earthquakes)**

According to some, such as Kāśyapa, earthquakes are caused by the shocks of great aquatic creatures living in the waters; while others hold that earthquakes occur due to the resting of the celestial elephants of the quarters who, being wearied by bearing the weight of the Earth, shake her.

According to Garga, certain teachers such as Vasiṣṭha hold that the winds, colliding with each other and striking the Earth with sound, cause earthquakes; while others, such as the elder Garga, say that earthquakes arise from the unseen deeds (*adṛṣṭa*, merit and demerit) of mankind.

According to the elder Garga, the sages Parāśara and others declared: In ancient times, when the Earth was shaken by mountains that had wings, flying up and down between heaven and earth, she, ashamed, spoke before Brahmā in the assembly of the gods—“O Lord, you have named me *Achalā* (immovable), yet I am rendered moving by these wandering, flying mountains; thus my name is falsified, and I am unable to endure this distress.” Seeing her face trembling with agitation, her lips quivering slightly, and her eyes filled with tears, Brahmā said to Indra, “Remove the Earth’s affliction, and by striking with your thunderbolt, destroy the wings of

the mountains." Indra consented and said to the Earth, "Fear not." But Brahmā decreed further: "For the purpose of signifying auspicious and inauspicious results, the gods of wind, fire, Indra, and Varuṇa shall shake you in order during day and night—the wind in the first part of day, fire in the latter part of day, Indra in the first part of night, and Varuṇa in the latter part of night."

According to Garga, the asterisms Uttaraphālgunī, Hasta, Citrā, Svātī, Punarvasu, Mṛgaśīrṣā, and Aśvinī belong to the northwestern quarter. If an earthquake occurs when the Moon is in one of these, seven days before it certain signs appear: the sky becomes filled with smoke, wind arises lifting dust from the earth and breaking trees, and the Sun's rays become dim. When the northwestern earthquake happens, it destroys grains, waters, and forest herbs; merchants suffer from swelling, asthma, madness, fever, and cough. Prostitutes, warriors, physicians, women, poets, singers, traders, craftsmen, and the inhabitants of Saurāṣṭra, Kuru, Magadha, Daśārṇa, and Matsya countries are afflicted.

The Pushya, Kṛttikā, Viśākhā, Bharaṇī, Maghā, Pūrvabhādrapadā, and Pūrvaphālgunī constellations belong to the southeastern quarter. If an earthquake occurs when the Moon is in one of these, seven days before, certain signs appear: during the interval of those seven days, the sky becomes flaming, pervaded by falling stars and meteors along with burning redness, and the wind carries fire about. In the southeastern earthquake, clouds and water reservoirs such as tanks, wells, and ponds perish; kings are filled with mutual hatred; there arise heat, ulcers, fevers, eruptions, and the disease of pallor. Fiery and angry men, and the people of Aśmaka, Aṅga, Brāhlīka, Naṅgaṇa, Kaliṅga, Vaṅga, Draviṇa, and Śabara countries are afflicted in many ways.

The asterisms Abhijit, Śravaṇa, Dhanisthā, Rohiṇī, Jyeṣṭhā, Uttarāṣāḍhā, and Anurādhā belong to the region of Indra. If an earthquake occurs when the Moon is in one of these, seven days before, certain signs appear: clouds having bodies like mountains, uttering deep sounds, flashing with lightning, resembling buffaloes, swarms of bees, or serpents in brightness, pour rain. In the Indra-type earthquake, men born in noble families, illustrious persons, kings, and chiefs of assemblies perish; and diseases such as dysentery, throat ailments, mouth diseases, and phlegmatic disorders prevail. The people of Kāśī, Yugandhara, Paurava, Kirāta, Kīra, Abhisāra, Hala, Madra, Arbuda, Saurāṣṭra, and Mālava are afflicted. Rain occurs in due measure according to necessity.

The asterisms Revatī, Pūrvāṣāḍhā, Ārdrā, Āśleṣā, Mūla, Uttarabhādrapadā, and Śatabhiṣaj belong to the region of Varuṇa. If an earthquake occurs when the Moon is in one of these, seven days before, the following signs are observed: the sky becomes disturbed, and in the Varuṇa-type earthquake, those living near seas and rivers perish; there is excessive rain; men become devoid of mutual enmity; and the people of Gonarda, Cedi, Kukura, Kirāta, and Videha regions are destroyed.

The rule for the period of yielding results is that the effect of an earthquake appears within six months, and the result of a thunderbolt (*nirghāta*) within two months. According to Garga and other sages, the results of other portents such as thunderbolts and meteors occur immediately along with the quarter to which they belong.

As to the results of meteors and other omens: meteors, Gandharva-cities, dust, thunderbolts, earthquakes, burning of the quarters, fierce winds, eclipses of the Sun and Moon, distortion of stars and constellations, rain without clouds, rain mixed with distorted wind, fiery sparks, wild animals entering villages, the rainbow appearing at night, disturbance at twilight, broken halos, reversal in the flow of rivers, sounds of trumpets in the sky, and other unnatural phenomena — the results of all these should be declared according to their respective regions. ॥ 24–26 ॥

If an earthquake belonging to the Indra region arises, it neutralizes the northwestern earthquake; if in the northwestern region, it neutralizes the Indra earthquake; if in the Varuṇa region, it neutralizes the Agni earthquake; if in the Agni region, it neutralizes the Varuṇa earthquake; if born of time (*velā-jāta*), it cancels the effect of the lunar mansion-type earthquake; and if born of a lunar mansion (*nakṣatra-jāta*), it cancels the time-born earthquake. But if an earthquake occurs in the northwestern region during the northwestern period, it strengthens its own result; the same rule applies to the others. Otherwise, not so. ॥ 27 ॥

If an earthquake occurs in the Agni region during the northwestern period or in the northwestern region during the Agni period, renowned kings perish or suffer distress equal to death; and mankind is afflicted by famine, death, and drought. ॥ 28 ॥

If an earthquake occurs in the Varuṇa region during the Indra period, or in the Indra period during the Varuṇa region, men enjoy abundance, welfare, rain, and peace in wealth; cows yield much milk, and kings live without mutual hatred. ॥ 29 ॥

According to Kāśyapa — when in any calamity such as twitching of limbs, etc., the period of result is not mentioned, then if it occurs in the northwestern region, the result appears in two months; if in the Agni region, in three fortnights (one and a half months); if in the Indra region, in seven days; and if in the Varuṇa region, on the very same day. ॥ 30 ॥

If an earthquake occurs in the Wind region, it shakes the Earth for two hundred yojanas; if in the Fire region, for ten yojanas; if in the Varuṇa region, for one hundred eighty yojanas; and if in the Indra region, for more than sixty yojanas.

If, after an earthquake has occurred, another happens on the third, fourth, seventh, thirtieth, fifteenth, or forty-fifth day thereafter, it causes the death of the chief ruler. ॥ 31 ॥

Chapter – 33

अथ उल्कालक्षणाध्यायः **(Ulkā-Lakṣaṇa Adhyāya – Chapter on the Signs of Meteors)**

The form of a meteor is that of beings who, having enjoyed auspicious results in heaven, fall down to the Earth. Dhisṇyā, Ulkā, Aśani, Lightning, and Star are the five kinds of meteors. According to Garga and other teachers, the guardians of the worlds, desiring to test men and to indicate good or evil results, release weapons, and these are called meteors.

The time of yielding results is thus: a meteor (Ulkā) gives its result within fifteen days, Dhisṇyā within fifteen days, Aśani within three fortnights (forty-five days), lightning within six days, and a falling star likewise within six days.

According to the *Samāsa-Saṃhitā*, a star gives one-fourth of its result, Dhisṇyā gives half, and lightning, meteor, and Aśani give their result in full. ॥ 3 ॥

An Aśani is that which, making a loud sound, rends the Earth and, whirling like a wheel, falls upon men, elephants, horses, deer, stones, houses, trees, or cattle.

Lightning is that which produces fear in beings, crackles with a sharp sound (*ṭaṭaṭa*), has a crooked and extended form, and falls quickly, blazing upon living creatures or heaps of wood.

Dhisṇyā is thin and short-tailed, flaming like fire, two cubits long, and is seen more in the middle of a region extending ten bows in measure.

A star is one cubit long, white, copper-colored, or fine like the thread of a lotus fiber, drawn obliquely downward or upward through the sky.

A meteor (Ulkā) has a large head, is of the height of a man (about three and a half cubits), and increases as it falls. It has many varieties.

Meteors of the forms of ghost, weapon, ass, camel, nose, monkey, tusked beast (like a boar), plough, deer, lizard, serpent, smoke, or double-headed shape are all inauspicious in result.

But if a meteor appears in the form of a banner, fish, elephant, mountain, lotus, moon, horse, burning dust, swan, auspicious tree (such as coconut), diamond or weapon, conch, or swastika (like a royal city), it brings welfare and prosperity to mankind.

अथ उल्कालक्षणाध्यायः **(Ulkā-Lakṣaṇa Adhyāya – Chapter on the Signs of Meteors)**

According to Kāśyapa— a meteor that, having many forms, falls in the middle of the sky is for the destruction of the king and the nation; and a meteor that roams repeatedly in the sky portends calamity for the people. ॥ 11 ॥

A further sign of a meteor— the meteor that touches the Sun or the Moon, or that, issuing from the Sun or the Moon and causing an earthquake, falls, brings the arrival of another king, diplomacy between kings, famine, and drought. ॥ 12 ॥

Another sign of a meteor— if a meteor moves in the clockwise course of the Sun and Moon respectively, it causes, in order, the destruction of those dwelling in the city and those dwelling outside. That is: if it moves in the Sun’s circumambulation (clockwise), it destroys city-dwellers; if it moves in the Moon’s circumambulation, it destroys those living outside. A meteor that issues from the Sun’s rays and falls in front of travelers is auspicious in result. ॥ 13 ॥

Another sign of a meteor— white, red, yellow, and black meteors destroy, respectively, the Brāhmaṇa, Kṣatriya, Vaiśya, and Śūdra classes. Likewise, the one that halts at the head destroys Brāhmaṇas, that which halts at the chest destroys Kṣatriyas, that which halts at the side destroys Vaiśyas, and that which halts at the tail destroys Śūdras. ॥ 14 ॥

Another sign of a meteor— meteors falling in the northern and other directions give inauspicious results to the classes in order, i.e., if it falls in the north, to Brāhmaṇas; in the east, to Kṣatriyas; in the south, to Vaiśyas; and in the west, to Śūdras. If that meteor is straight, smooth, unbroken, and moves in the lower part of the sky, it causes the increase of the Brāhmaṇa and the other classes. ॥ 15 ॥

Further signs of meteors— a tawny (monkey-like) colored, red, blue, blood-colored, fire-like, black, smoky, rough meteor; one arising at twilight; one arising in the daytime; crooked or broken—all these meteors cause the city-dwellers to fear the arrival of enemies. ॥ 16 ॥

Another sign of a meteor— if a meteor strikes a lunar mansion (nakṣatra) or a planet, then, as stated in the array of lunar mansions, it destroys the devotees (subjects) of that lunar mansion or planet. If it strikes the Sun or the Moon at the time of rising or setting, it destroys, respectively, city-dwellers and those living outside; that is: if the Sun is struck, city-dwellers, and if the Moon is struck, those living outside are destroyed.

According to Kāśyapa— if the yogatārā (principal star) of Uttaraphālgunī, Punarvasu, Dhanisthā, or Mūla is struck by a meteor, young women suffer; if the yogatārā of Puṣya, Svātī, or Śravaṇa is struck by a meteor, Brāhmaṇas and Kṣatriyas suffer. If the yogatārā of Uttaraphālgunī, Uttarāṣāḍhā, Uttarabhādrapadā, Rohiṇī, Mṛgaśīrṣa, Citrā, Anurādhā, or Revatī is struck by a meteor, kings suffer. If the yogatārā of Pūrvaphālgunī, Pūrvāṣāḍhā, Pūrvabhādrapadā, Bharaṇī, Maghā, Ārdrā, Āśleṣā, Jyeṣṭhā, or Mūla is struck by a meteor, thieves suffer. And if the yogatārā of Aśvinī, Hasta, Abhijit, Kṛttikā, or Viśākhā is struck by a meteor, those who know the arts suffer.

If a meteor falls upon the image of a deity, it brings fear to the king and the nation; if upon Indra, it brings fear to kings; and if upon a house, it afflicts the householder. If the regent of a direction (dik-pati) planet is struck by a meteor, the people dwelling in that direction suffer; if it falls upon a threshing floor, the farmers; and if a meteor falls upon a tree near a small temple, revered persons are afflicted. If a meteor falls upon the city-gate, it destroys the city; if upon the door-leaf of the gate, the city-dwellers; if upon Brahmā's temple, Brāhmaṇas; and if upon the cowshed, those who tend cows are destroyed. ॥ 20–22 ॥

Special note— if at the time of a meteor-fall there are sounds of *kṣaveḍā* (heroes' roar), *āsphoṭana* (the sound of striking the chest with one hand while the other is placed on it), instrumental music, or singing, it portends fear for the king and the nation. ॥ 23 ॥

Special note— a meteor whose attachment (trail) remains in the sky for a long time, which appears staff-shaped, which remains as if tied by a cord in the sky, or which appears like a rainbow—all these are for fear to the king. ॥ 24 ॥

Special note— a meteor that returns (goes back the way it came) destroys wealthy merchants; one that moves obliquely destroys queens; one that is downward-faced destroys kings; and one that goes upward destroys Brāhmaṇas. A meteor like a peacock's tail destroys people; and one that moves like a serpent gives inauspicious results to women. A disc-shaped meteor destroys a city; an umbrella-shaped one destroys the family priest; and a clump-of-bamboo-shaped meteor causes fear to the realm. A meteor garlanded with sparks like a serpent or a boar, fragmented and with sound, gives sinful results. ॥ 25–28 ॥

Further special note— a meteor like a rainbow and one which, having arisen in the sky, quickly vanishes, destroys clouds. Also, one that, crookedly moving against the wind, rises and does not move downward is inauspicious. ॥ 29 ॥

Further special note— from the direction from which a meteor comes and falls upon a city or an army, from that very direction the king experiences fear; and toward the direction which it illuminates as it falls, a king proceeding in that direction quickly destroys his enemies.

Chapter – 34

अथ परिवेषलक्षणाध्यायः **(Pariveṣa-Lakṣaṇa Adhyāya – Chapter on the Signs of Halos)**

The manifestation of the halo is as follows— when, by the wind, the rays of the Sun and the Moon become circular, and in a clouded sky are reflected and appear of many colors, that is called *Pariveṣa* (halo). ॥ 1 ॥

The colors of halos and their lords— the halos made by Indra, Yama, Varuṇa, Nirṛti, Vāyu, Śiva, Brahmā, and Agni are, in order, red, blue, slightly white, dove-colored, cloud-colored, variegated (black-and-white), green, and white. That is: Indra-made is red, Yama-made blue, Varuṇa-made slightly white, Nirṛti-made dove-colored, Vāyu-made cloud-colored, Śiva-made variegated, Brahmā-made green, and Agni-made white. ॥ 2 ॥

The halo made by Kubera is of *mechaka* hue (peacock-neck-like blue). Others (those of Indra, etc.) are of mixed colors. A halo that arises repeatedly and then vanishes is wind-made and gives little result.

According to Kāśyapa— if a halo having luster like a kingfisher (nīlakaṇṭha), like a peacock, like silver, like oil, like milk, and like water appears, each in its proper season—namely, in winter (Śiśira) like the kingfisher's luster, in spring like the peacock's luster, in summer like silver, in the rainy season like oil, in autumn like milk, and in Hemanta like water—and if it is an unbroken circular disc and clear, then it brings welfare and prosperity to the people.

According to Kāśyapa— an inauspicious halo is one that traverses the entire sky (remaining from rise to set), is of many colors, is red-colored, rough, unbroken and thick, or is of the form of a cart, a bow, or a triangle. ॥ 5 ॥

Results from the colors of halos— a peacock-neck-like blue halo causes excessive rain; a many-colored halo causes the destruction of the king; a smoky-colored halo causes fear; and a halo like a rainbow or with very red luster like the Aśoka flower causes war. ॥ 6 ॥

Knowledge of rain from halos— if, in its proper season, a single-colored, very clear halo, covering the clouds like a razor (encircling cleanly), is seen, then it causes quick rain. If the halo is yellow and at that time the Sun's rays are sharp, then also it causes rain quickly. ॥ 7 ॥

A fear-causing halo— if a rough, very extensive halo appears at all three twilights (morning, midday, and evening), accompanied by the sounds of deer and birds facing toward the Sun, it is fear-causing.

According to Garga— if each day the Sun by day and the Moon by night have a red halo, it causes the destruction of the king; likewise, if the halo of the Sun or Moon is always seen at rising or setting, it destroys the king.

According to the *Samāsa-Saṃhitā*— a two-ring halo causes fear to the commander, but not severe fear from weapons; a halo of three or more rings (three, four, five) causes weapon-anger (war), fear to the crown prince, and blockade of the city by enemies.

Chapter – 34 (Continuation)

अथ परिवेषलक्षणाध्यायः **(Pariveṣa-Lakṣaṇa Adhyāya – Chapter on the Signs of Halos)**

According to Garga— if a planet beginning with Mars, or the Moon, or any lunar mansion, these three go into one halo (*pariveṣa*), then there is rain within three days and war within one month. For the king whose lord of the birth ascendant, or lord of the birth sign, or birth lunar mansion is in the halo, inauspicious results occur to that king.

According to Garga— if Saturn is in the halo-ring, there is destruction of small grains (such as *Kaunī*), rain accompanied by wind, harm to immovables (trees, etc.), and destruction of farmers. If Mars is in it, he causes agitation to princes, the commander, and the armies, and there is fear from fire and weapons. If Jupiter is in it, the family priest, ministers, and kings suffer. If Mercury is in it, there is intelligence to ministers, benefit to immovables (trees, etc.), skill to scribes, and beautiful rain. If Venus is in it, traveling Kṣatriyas and queens suffer, and there is famine. If Ketu is in it, there is famine, fire, death, fear to the king and fear from weapons. And if Rahu is in the halo-ring, there is fear regarding pregnancy, disease, and fear to the king.

According to the *Samāsa-Saṃhitā*— if two star-planets are situated in the halo of the Sun or the Moon, there is war; if three, fear of famine and drought; if four, the death of the king together with minister and family priest; and if five or more planets are in the halo of the Sun or the Moon, one should understand it as the very dissolution of the world. ॥ 16–17 ॥

If, when Ketu has not risen, the star-planets or the lunar mansions are separately accompanied by halos, they bring about the destruction of the king.

According to Kāśyapa— if halos are seen on the first four lunar days (Pratipadā and onward), then there is destruction of the four classes respectively: if on Pratipadā, destruction of Brāhmaṇas; on Dvitīyā, of Kṣatriyas; on Tṛtīyā, of Vaiśyas; and on Caturthī, of Śūdras. If a halo is seen on Pañcamī it is inauspicious for guilds (associations of the same caste); on Ṣaṣṭhī, for the city; on Saptamī, for the treasury. If seen on Aṣṭamī, it is inauspicious for the crown prince; and if seen on Navamī, Daśamī, or Ekādaśī, it is inauspicious for the king. On Dvādaśī it causes blockade of the city, and on Trayodaśī there is confusion among the armies. If seen on Caturdaśī, the queen suffers, and on the full-moon day the king suffers. ॥ 19–21 ॥

Results from lines within the halo— if a line is seen inside the halo, it affects the city-dwellers; if seen outside, it affects kings on the march seeking victory; and if a line is seen in the middle of the halo, it makes auspicious or inauspicious the main bodies (armies) in a terrible battle (*ākranda*). Whose portion possesses a halo that is red, black, or rough—defeat befalls them; that is, if inside it is red, black, or rough, the city-dwellers are defeated; if outside, the marching, victory-seeking kings; and if in the middle of the halo red, black, or rough appears, the armies are defeated. And whose portion is clear, white, and lustrous—victory is theirs. ॥ 22–23 ॥

Chapter – 35

अथ इन्द्रायुधलक्षणाध्यायः **(Indrāyudha-Lakṣaṇa Adhyāya – Chapter on the Signs of the Rainbow)**

The form of the rainbow is this— in a cloud-filled sky, the Sun's rays, striking by means of the wind, appear bow-shaped with many colors; people call that the rainbow. ॥ 1 ॥

Another view and its auspicious/inauspicious result— some teachers (such as Kāśyapa) hold that it arises from the breaths of serpents produced in the mouth of the serpent-king. If kings proceed facing this (rainbow), they are defeated.

According to Kāśyapa— an unbroken rainbow that is grounded upon the earth, bright, clear, intact, of many colors, appearing twice, or standing in the west, is auspicious and brings much rain. (Special note: here some interpret "*anuloma*" as one being in the south and the other in the north.)

According to the Peacock-Pattern teaching of Garga— if a rainbow appears in the intermediate directions (northeast, southeast, southwest, northwest), the lord of that direction (as stated in Chapter 86, verse 34) is destroyed. If the rainbow is slightly red, yellow, or blue, it brings, respectively, defect from weapons, defect from fire, and famine; i.e., if slightly red, weapon-defect; if yellow, fire-defect; if blue, famine. ॥ 4 ॥

If a rainbow appears in water, there is drought; if on the earth, the destruction of grains; if on a tree, disease; if on an anthill (a swarm of white ants), fear from weapons; and if at night, the death of the minister. ॥ 5 ॥

Directional results— if, in a time of drought, a rainbow appears in the east, it brings rain; and if in a time of rain it appears, it brings drought. And a rainbow situated in the west always brings rain. ॥ 6 ॥

Directional results of the rainbow— if at night a rainbow appears in the east, it afflicts the king; if in the south, the commander; if in the west, leading men; and if in the north, it destroys the minister.

According to Kāśyapa— if at night a rainbow of the colors white, red, yellow, or black is seen, it destroys the classes beginning with Brāhmaṇas: namely, white destroys Brāhmaṇas, red destroys Kṣatriyas, yellow destroys Vaiśyas, and black destroys Śūdras. And whichever direction the rainbow appears in, it quickly destroys the chief king of that direction. ॥ 8 ॥

Chapter – 36

अथ गन्धर्वनगरलक्षणाध्यायः **(Gandharva-Nagara-Lakṣaṇa Adhyāya – Chapter on the Signs of the City of the Gandharvas)**

Directional results— if a Gandharva-city appears in the northern and other directions, it is inauspicious respectively for the family priest, the king, the commander, and the crown prince; that is, if seen in the north, for the family priest; in the east, for the king; in the south, for the commander; and in the west, for the crown prince. And if it is white in color, it destroys Brāhmaṇas; if red, Kṣatriyas; if yellow, Vaiśyas; and if black, Śūdras. ॥ 1 ॥

If a Gandharva-city is situated in the north, it grants victory to kings; if situated in the intermediate directions (northeast, southeast, northwest, southwest), it destroys mixed castes (low-born). And if in a calm direction it appears with stars, it is for the king's victory. ॥ 2 ॥

If a Gandharva-city appears every day at all times, it brings fear to both king and realm; and if it has a luster like smoke, fire, or a rainbow, it destroys thieves and forest-dwellers. ॥ 3 ॥

If a Gandharva-city of whitish (pāṇḍura) color is seen, it acts with wind along with thunderbolt-strike; if situated in a "brilliant direction" (as mentioned in Chapter 86, verse 12), it brings death to the king of that direction; and on the left there is fear from enemies, while on the right there is victory. ॥ 4 ॥

At the time when, in the sky, a Gandharva-city appears like many-colored banners, flags, or a city-gate, then in battle the earth drinks much blood of elephants, men, and horses.

Chapter – 37

अथ प्रतिसूर्यलक्षणाध्यायः **(Prati-Sūrya-Lakṣaṇa Adhyāya – Chapter on the Signs of the Counter-Sun Halo)**

The counter-sun (*prati-sūrya*) has the color similar to the seasonal color of the Sun (as stated in Chapter 3, verse 23). If it is clear, transparent like a vaidūrya gem, and white, it brings security and prosperity. ॥ 1 ॥

A yellow counter-sun produces disease. A counter-sun red like the Aśoka flower is for weapon-anger (war). If a garland (ring) of the counter-sun is seen, it brings fear from thieves, disturbances, and the destruction of the king. ॥ 2 ॥

If the counter-sun is seen to the north of the solar disc, there is rain; if to the south, there is wind. If on both sides, there is destruction of the king; and if below, there is destruction of the people.

Chapter – 38

अथ रजोलक्षणाध्यायः **(Rajo-Lakṣaṇa Adhyāya – Chapter on the Signs of Dust)**

From the signs of dust indicating the destruction of the king— when, like thick darkness, dust spreads so that mountains, cities, trees, and all directions are covered and nothing is visible, then the destruction of the king should be declared. ॥ 1 ॥

From the direction of the dust's origin and end—the directions in which the dust first arises and in which it subsides, in those two directions, within seven days, there is certainly fear. ॥ 2 ॥

From the color of dense dust— if the mass of dense dust is white in color, it afflicts the minister and the realm, there is immediate outbreak of weapons, and accomplishments are achieved with extreme difficulty. ॥ 3 ॥

If, arising at sunset, the dust remains covering the sky for one or two days, it foretells intense fear. ॥ 4 ॥

If, gathered uniformly, the dust remains for one night, it causes the death of the chief king and is auspicious for the remaining wise kings. ॥ 5 ॥

Where, for two nights, uniformly compacted dust spreads, in that country one should certainly predict the arrival of another king. ॥ 6 ॥

If dust continues to fall for three or four nights, it is for the destruction of food and liquids; if for five nights, there is tumult among the armies of kings. ॥ 7 ॥

If, after the rising of Ketu (and the like), dust falls, it gives intense fear. The opinion of the teachers is that, except in the winter season (Śiśira), in all the other seasons it gives exact results. ॥ 8 ॥

Chapter – 39

अथ निर्घातलक्षणाध्यायः **(Nirghāta-Lakṣaṇa Adhyāya – Chapter on the Signs of Thunderclap/Blast)**

The characteristic of *Nirghāta*— when wind, striking against wind, falls from the sky to the earth, the sound produced by its fall is called *Nirghāta*. If it is accompanied by the sounds of birds facing the Sun, it gives evil results.

According to Garga— by time: if *Nirghāta* occurs at sunrise, it destroys judges (officers of litigation), the king, the wealthy, heroes, women traders, and courtesans. If it occurs in the first quarter of the day, it destroys goats, shepherds, Śūdras, and city-dwellers. In the second quarter it afflicts royal servants and Brāhmaṇas. In the third quarter it destroys merchants and clouds. In the fourth quarter it afflicts thieves. In the first quarter of the night it destroys grains. In the second quarter it afflicts hosts of goblins. In the third quarter it destroys elephants and horses. If *Nirghāta* occurs in the fourth quarter of the night, it destroys travelers. And toward whichever direction the terrible sound goes, like the crash of a broken jar, it destroys that direction.

Chapter – 40

अथ सस्यजातकाध्यायः **(Sasyajāta-Adhyāya – Chapter on the Agriculture Horoscopy/Grain Prognostics)**

Here is the exposition from tradition— at the time of the Sun's entry into Scorpio and Taurus, the auspicious and inauspicious results for grains produced in the summer and autumn seasons, as told by the sage Bādarāyaṇa, are as follows. ॥ 1 ॥

Combination for the increase of summer grains— at the time of the Sun's entry into Scorpio, if benefic planets are in the Kendra from him (Scorpio, Aquarius, Taurus, and Leo), or wherever (even outside the Kendras) strong benefics aspect the Sun placed in Scorpio, then there is increase of grains produced in the summer season.

According to Bādarāyaṇa— when, at the time of the Sun's going into the eighth sign (Scorpio), Jupiter is in Aquarius and the Moon in Leo, or Jupiter is in Leo and the Moon in Aquarius, there is production (increase) of the grains of the summer season. ॥ 3 ॥

From planetary positions, increase of summer grains— if Venus or Mercury, or both together, are in the second or twelfth from the Sun, there is production of summer grains. If, in the

aforesaid combinations, there is the aspect of Jupiter, there is excellent production of summer grains.

From planetary position, production of grains— if, placed between two benefic planets, the Sun is in Scorpio, and Jupiter and the Moon are in the seventh from the Sun, there is excellent production of grains. And if the Sun is at the beginning of Scorpio and Jupiter is second from him, there is half production of grains. ॥ 5 ॥

From planetary position, production of grains— if from the Sun placed in Scorpio, Venus is in the eleventh, the Moon in the fourth, and Mercury in the second, there is excellent production of grains. If, in the aforesaid combination, Jupiter is in the tenth, there is excellent wealth among cows (abundance of milk). ॥ 6 ॥

From planetary position, production of grains— if Jupiter is in Aquarius, the Moon in Taurus, the Sun at the beginning of Scorpio, and Mars and Saturn in Capricorn, there is great production of grains; but thereafter there is the arrival of a foreign army and fear of disease. ॥ 7 ॥

From planetary position, destruction of grains— if, being in Scorpio, the Sun is placed between two malefics, he destroys the grains; and if a malefic is in the seventh sign (Taurus), it also destroys the very production of grains.

According to Bādarāyaṇa— if from the Sun placed in Scorpio, a malefic is in the second place and is not aspected by a benefic, it destroys the first-sown crop; but the later-sown crop yields well. ॥ 9 ॥

From planetary position, production of grains— if from the Sun placed in Scorpio, in the seventh (Taurus) there is one malefic, and in the Kendra other than the seventh (Aquarius or Leo) there is another malefic (one of Mars or Saturn), it destroys grains. If both those malefics (Mars, Saturn) are aspected by benefics (Mercury, Jupiter, Venus), then not everywhere but in certain places the grains are destroyed.

From planetary position, production of grains— if from the Sun placed in Scorpio, there are two malefics, Mars and Saturn, in the seventh and sixth places, there is production of grains; but the price of grains becomes high. ॥ 11 ॥

Knowledge of the condition of autumnal grains— just as stated previously, at the time of the Sun's transit in Taurus, the destruction or production of autumnal grains should be known by the learned.

By the Sun's transit, cheapness and dearness of summer grains— if the Sun, moving in the three signs beginning with Aries (Aries, Taurus, Gemini), is conjoined with or aspected by a benefic, then the grains produced in summer are cheap, and are suitable for both this world and the next (i.e., very cheap grains allow enjoyment with relatives for this world, and performance of charity etc. for the next). In some texts the reading is "*abhyopayogyam*," meaning "fear-removing," i.e., at such a time people live without fear. ॥ 13 ॥

Similarly for autumnal grains— likewise, if the Sun stationed in Sagittarius, Capricorn, and Aquarius is conjoined with or aspected by a benefic, then the autumnal grains are cheap and suitable for both worlds; but if the Sun in the three signs beginning with Aries or beginning with Sagittarius is aspected by or conjoined with a malefic, then the opposite result (dearness and not suitable for both) should be understood. Therefore, at the time of collection (selling), these are the favorable combinations; i.e., when the Sun is in adverse combinations, selling should be done. ॥ 14 ॥

Chapter – 41

अथ द्रव्यनिश्चयाध्यायः **(Dravya-Niścaya Adhyāya – Chapter on the Determination of Commodities)**

Here is the exposition from tradition— taking from authoritative texts, I declare here the signs (rāśis) that are lords of the various commodities for knowing auspicious and inauspicious results. ॥ 1 ॥

Commodities of Aries— cloth, cloth made from sheep's wool, *kutupa* (cloth made from goat hair), lentil (masūr), wheat, resin, barley, and medicinal herbs produced on dry land (lacking water) are ruled by Aries.

According to Kāśyapa— commodities of Taurus and Gemini— cloth, *puṣṇa* (a kind of grain/produce), wheat, *śālī* rice, barley, buffalo, and bull are ruled by Taurus. Grains, autumnal creepers, *śālūka* (lotus tuber), and cotton are ruled by Gemini.

Commodities of Cancer and Leo— *kodo* millet, banana, *dūba* grass, all fruits, tubers (sweet potato, etc.), aromatic leaves, and coconut are ruled by Cancer. Husked grains, the six tastes (juices), leonine creatures, hides, and jaggery are ruled by Leo.

Commodities of Virgo and Libra— flax (ātasi/alasi/tisī), *kalāya* (urd/black gram), *kulthī*, wheat, green gram (moong), and *niṣpāva* (śāli-grain or pulse) are ruled by Virgo. Lentil, barley, wheat, and mustard are ruled by Libra.

Commodities of Scorpio and Sagittarius— sugarcane, fruits of creepers, iron, and articles related to goats and sheep are ruled by Scorpio. Horse, salt, cloth, weapons, sesame, grains, and root-produced grains are ruled by Sagittarius.

Commodities of Capricorn and Aquarius— trees, shrubs (bushy plants), creepers, clustered fruits (of vines), sugarcane, gold, and iron are ruled by Capricorn. Things produced in water, fruits, flowers, gems, and painted/figured objects are ruled by Aquarius.

Commodities of Pisces— pearl (shell-born gem), objects produced in water, diamond, various kinds of oils, and pearls produced from fish, etc., are ruled by Pisces.

Auspicious and inauspicious results for the aforesaid commodities— from any sign, if Jupiter is in the fourth, tenth, second, eleventh, seventh, ninth, or fifth, he increases the commodities stated for that sign; likewise, if Mercury is in the second, eleventh, tenth, fifth, or eighth, he increases them. If from a sign Venus is in the sixth or seventh, he causes loss of the commodities of that sign, but if in the remaining places (1st, 2nd, 3rd, 4th, 5th, 8th, 9th, 10th, 11th, or 12th), he increases them. And from a sign, if malefics (Sun, Mars, and Saturn) are in upacaya (3rd, 6th, or 11th), the commodities increase; but if they are in the remaining places (1st, 2nd, 4th, 5th, 7th, 8th, 9th, 10th, or 12th), there is loss.

Special note— from a sign, if the malefics (Sun, Mars, Saturn), being in the afflicting (upacaya) places, are strong (in friend sign, own sign, exaltation, own navāṃśa, or aspected by benefics), then the commodities belonging to that sign become high-priced and hard to obtain.

Further special note— from a sign, if strong benefics (Mercury, Jupiter, and Venus) are in the desired (previously stated increase) places, then the commodities of that sign are obtainable at low price and are pleasing.

Yet further special note— when a sign is under transit affliction (i.e., when Jupiter etc. are placed not in the aforesaid auspicious fourth etc. places), such a sign, if aspected by strong benefics (Mercury, Jupiter, and Venus), does not afflict (i.e., those commodities remain at fair price). But if aspected by malefics (Sun, Mars, and Saturn), then the commodities of that sign become very costly and scarce. ॥ 13 ॥

Chapter – 42

अथ अर्घकाण्डाध्यायः **(Argha-Kāṇḍa Adhyāya – Chapter on Pricing/Valuations)**

First, the statement of purpose— when the Sun moves through the signs beginning with Aries, on each month's new and full moon, one should, by observing portents such as excessive rain, meteor, staff (daṇḍa), halo (pariveṣa), eclipse, paridhi, etc. (and also dust-veil, burning of the quarters, and Gandharva-city), determine the special pricing of commodities. Other portents (occurring on tithis different from new and full moon) afflict kings with weapon-conflicts.

According to Kāśyapa— when, on a portent-bearing new or full moon, the Sun is in Aries or Taurus, what should be done? During the Sun's stay in Aries, collect the grains that arise in the summer season; and during the Sun's stay in Taurus, collect roots and fruits occurring therein; by selling them in the fourth month from Aries and Taurus, profit accrues. ॥ 3 ॥

What should be done when the Sun is in Gemini— by collecting all the tastes beginning with sweet, and selling them in the sixth month thereafter, great profit occurs. ॥ 4 ॥

What should be done when the Sun is in Cancer— by collecting honey, fragrant substances, oil, ghee, and sugar during the Sun's transit in Cancer, and selling them in the second month, double profit occurs. By selling in less or more than two months, there is loss. ॥ 5 ॥

What should be done when the Sun is in Leo— by collecting gold, gems, hides, weapons, pearls, and silver during the Sun's transit in Leo, profit accrues by selling in the fifth month. By selling earlier or later than that time, there is loss. ॥ 6 ॥

What should be done when the Sun is in Virgo— during the Sun's transit in Virgo, upon observing the aforesaid portents, by collecting chowries, asses, camels, and horses, and selling them in the sixth month, double profit occurs. ॥ 7 ॥

What should be done when the Sun is in Libra— during the Sun's transit in Libra, upon observing the aforesaid portents, by collecting cotton and woolen cloths, vessels, gems, blankets, glass, yellow cloths, flowers, and grains, and selling them in the sixth month, double profit occurs. ॥ 8 ॥

What should be done when the Sun is in Scorpio— during the Sun's transit in Scorpio, when the aforesaid portents occur, by collecting fruits, tubers, roots, and many kinds of gems, and selling after two years, double profit occurs. ॥ 9 ॥

What should be done when the Sun is in Sagittarius— during the Sun's transit in Sagittarius, when the aforesaid portents occur, by collecting saffron, conch, coral, glass, and pearls, and selling after six months, double profit occurs. ॥ 10 ॥

What should be done when the Sun is in Capricorn or Aquarius— during the Sun's transit in Capricorn or Aquarius, when the aforesaid portents occur, by collecting iron, vessels, and grains, and selling after one month, the profit-seeking merchant makes double profit. ॥ 11 ॥

What should be done when the Sun is in Pisces— during the Sun's transit in Pisces, when the aforesaid portents occur, by collecting roots, fruits, tubers, vessels, and gems, and selling after six months, desired profit occurs. ॥ 12 ॥

Special note— in whichever sign the Moon or the Sun, being conjoined with or aspected by its immediate great-friend planet at that time, is placed, in that sign the aforesaid profit occurs; not elsewhere.

According to Kāśyapa— further special note— in the sign where the Moon conjoined with the Sun, or the full Moon, is conjoined with or aspected by benefics (Mercury, Jupiter, and Venus), there is increase in price of the commodities related to that sign; and in the sign where it is conjoined with or aspected by malefics (Mars and Saturn), the commodities related to that sign are destroyed. In this manner, knowing the commodities pertaining to each sign, one should declare auspicious and inauspicious results.

Chapter – 43

अथ इन्द्रध्वजसम्पदध्यायः **(Indra-Dhvaja-Sampad Adhyāya – Chapter on the Prosperity of Indra's Banner)**

Origin of the Indra-banner— all the gods said to Brahmā: “O Lord! We are not capable of fighting with the demons in battle; therefore we take refuge in you.” ॥ 1 ॥

Brahmā’s instruction to the gods— Lord Brahmā said to the gods: “In the ocean of milk abides Lord Nārāyaṇa; he will give you a banner (*ketu*, dhvaja). Seeing it, the hosts of demons will not stand firm in battle.” ॥ 2 ॥

The gods, together with Indra, went to Lord Nārāyaṇa and offered praise— thus obtaining the boon, the gods, along with Indra, went to the ocean of milk and praised Lord Nārāyaṇa thus: “O Lakṣmī’s Lord, bearing the Śrīvatsa mark, with the chest illumined by the rays of the Kaustubha gem, inconceivable, incomparable, equal through pervading all beings, subtle because known with great difficulty by all beings, Supreme Self, beginningless, Viṣṇu (all-pervading), of unknown end.” Thus praised by the gods along with Indra, that Lord Nārāyaṇa, being pleased, gave to the gods a banner that was like the Moon and the Sun in turn in the lotus-forest that is chief in the faces of the women of demons and of gods—(i.e., like the Moon because it withers the lotus-face of demon-women, and like the Sun because it makes bloom the lotus-face of goddesses). ॥ 3–5 ॥

Form of the banner— having obtained a banner produced from Viṣṇu’s splendor, furnished with eight wheels, shining, placed upon a chariot adorned with gems, and radiant like the autumnal Sun, Indra was greatly delighted. ॥ 6 ॥

What Indra did upon obtaining the banner— with the lofty banner adorned with clusters of tinkling bells, garlands, umbrella, bell, and *piṭaka* (a kind of ornament affixed to the banner), he destroyed the enemy’s army in battle.

According to Garga— Indra gave a staff (banner-pole) to King Vasu— to Vasu, king of the Cedis, who ascends upward (though dwelling on earth goes to heaven), Indra gave a bamboo staff, which the Cedi-lord duly worshiped. ॥ 8 ॥

Indra’s satisfaction and the greatness of the banner— pleased by King Vasu’s worship, Indra said: “The king who will celebrate the festival like King Vasu will be a ruler on earth endowed with various kinds of gems. The subjects of that king will be joyful, free from fear and disease, and possessed of abundant foodstuffs in plenty. And in the world, by (various) causes, the banner itself will declare auspicious and inauspicious results.” ॥ 9–10 ॥

The ordinance of the banner— in former times, by Indra’s command, the kings who desired increase of strength and victory performed the worship of that banner; taking it from the śāstra, I relate its rule here.

The ordinance of the banner— on an auspicious *karaṇa* (as stated in Chapter 99, verses 4–5), auspicious day, auspicious lunar mansion, auspicious omens, and auspicious *muhūrta* (as stated in the chapter on journeys), the astrologer and carpenter should go to the forest.

For the Indra-banner— excepting trees that grow in gardens, temples, cremation grounds, anthills (swarms of white ants), paths, and sacrificial grounds; and trees that are crooked, dried

while still standing, thorny, entwined with creepers, bearing *vandā* creepers, having many birds' nests, broken by wind, burnt by fire, and those with feminine names (such as kadalī, vadalī, etc.)—other auspicious trees should be cut for the Indra-banner.

According to Garga— auspicious trees for the banner— Arjuna (kāhū), Ajakarṇa, Priyaka, Dhava, and Gūlar—these five trees are auspicious for the banner, one of these or another tree endowed with the auspicious marks to be stated. ॥ 15 ॥

What sort of tree bears auspicious marks— going near a tree produced on white or black soil, at night in a place devoid of people, after duly worshiping, touching the tree, one should utter the mantras to be stated. ॥ 16 ॥

Two verses showing the mantra— "May it be auspicious for all the creatures that are upon this tree; I bow to you all—accept this oblation and dwell elsewhere. O chief tree! May it be auspicious for you; for Indra's banner the king desires to obtain you. Therefore accept my worship performed." ॥ 17–18 ॥

What should be done thereafter— after sunrise, facing north or east, the tree should be cut. A rattling, broken sound of the axe (parasu) is inauspicious; but a sweet and dense sound is auspicious. ॥ 19 ॥

Auspicious/inauspicious result from the fallen tree— if the tree falls unbroken or straight, and to the east or north, it brings victory to the king. If it falls with different marks than these (broken or crooked, or into the southeast, south, southwest, west, or northwest), it is inauspicious. ॥ 20 ॥

What should be done after this— cutting off four finger-breadths from the front of this tree and eight finger-breadths from the root, one should immerse the shaft (middle part) in water; afterwards, lifting it from the water, it should be brought to the city-gate by cart or by men. ॥ 21 ॥

Omens while bringing the wood— if, while bringing the wood, the rim (of the cart's wheel) breaks, there is division in the armies; if the felly (rim-ring) breaks, the armies perish; if the axle breaks, there is loss of wealth; and if the linchpin breaks, the carpenter dies. ॥ 22 ॥

At what time and how it should be brought in— on the eighth day of the bright half of Bhādra month, the king, together with townsmen, astrologers, ministers, chamberlains, and chief Brāhmaṇas well adorned, should have the shaft—covered with new cloth, furnished with garlands, unguents, and incenses—brought into the city with the sound of conch and trumpet.

अथ इन्द्रध्वजसम्पदध्यायः **(Indra-Dhvaja-Sampad Adhyāya – Chapter on the Prosperity of Indra's Banner)**

According to Garga— how the city should be: the city should be adorned with delightful banners, arches (toranas), and garlands of forest-flowers; filled with joyful people; with purified

and decorated roads; thronged with courtesans of beautiful attire; with decorated shops; abounding in cries of *puṇyāha* and sounds of the Veda; and crowded with actors, dancers, and those skilled in singing, and with crossroads (chatuṣpatha).

Result of the color of the banner: in that city, a white banner is for victory; a yellow one causes disease; a many-colored one brings victory; and a red banner is for weapon-anger. ॥ 27 ॥

Auspicious and inauspicious omens at the time of bringing it in: if, while the shaft is being brought into the city, an elephant, horse, or any creature knocks it down, it is for fear; if at that time children clap their hands, or cows fight one another, it is for war. ॥ 28 ॥

What should be done thereafter: then the carpenter, having duly shaved (smoothed) the shaft, should mount it upon the cart; the king should maintain a vigil on the forthcoming Ekādaśī. The family priest, clad in white garments and turban, should offer oblations in fire with mantras to the deities Indra and Viṣṇu, and the *Sāmvatsara* (astrologer) should take note of the auspicious and inauspicious signs of the fire. ॥ 29–30 ॥

Marks of the fire's auspiciousness/inauspiciousness: a fire that is like the desired substances, fragrant, clear, dense, and with tongues of flame is auspicious; a fire endowed with marks contrary to these is inauspicious. In relation to this, in the work named *Yogayātrā* I have spoken at length.

In the *Yogayātrā*— further auspicious mark: if, at the completion of the *svāhā* (final oblation), the fire is self-kindled with a pure flame moving in a rightward (dakṣiṇāvarta) order, then the king brings under his control the earth that has the lovely necklace of the waters of the Gaṅgā and Yamunā and the girdle of the ocean—i.e., he becomes the king of the whole earth. ॥ 32 ॥

Further auspicious marks of the fire: if the fire has luster like gold, like the Aśoka, like Kuraṇṭaka, like the vaidūrya gem, or like the blue lotus, then in the house of the king who performs the oblation, darkness finds no place, being destroyed by the rays of gems. ॥ 33 ॥

Result from the sound of the fire: if in the fire there is a sound like the ocean, cloud, elephant, or kettledrum, then at the time of that king's march, the directions, filled with rut-mad elephants, become as if dark—i.e., that king has abundance of elephants. ॥ 34 ॥

Other marks of the fire: if the fire is like a banner, pot, horse, or elephants, then the earth—whose lips are the eastern and western mountains and whose breasts are Himālaya and Vindhyācala—comes under that king's control. ॥ 35 ॥

Further marks of the fire: if in the fire there is fragrance like the rut-water of elephants, or like parched grain, ghee, or honey, then the forward ground seems dyed by the luster of the gems set in the crowns of kings bowing to the king who performs the oblation. ॥ 36 ॥

Consideration of the foregoing fire-marks also at birth, etc.: the auspicious and inauspicious results declared from the form of the fire at the time of raising Indra's banner are to be

considered likewise at birth, at the time of sacrifice, at planetary appeasement, on journeys, and at marriage. ॥ 37 ॥

Method of raising the banner: after worshiping the Brāhmaṇas with jaggery, cakes, milk-pudding, and gifts, on the Dvādaśī tithi joined with Śravaṇa nakshatra, or on any other tithi joined with Śravaṇa, the banner should be raised.

According to Garga— marks of the Śakra-kumārī: five or seven Śakra-kumārīs should be made atop the banner, so says Manu. Nandā should be made a quarter less than the height of the banner; Upanandā equal to half the banner; Jaya and Vijaya each one-sixteenth more than the banner; two Vasundharās each one-sixteenth more than Jaya and Vijaya; and in the midst of all, Śakra-janitrī should be made one-eighth more than Vasundharā.

Ornament of the Indra-banner: the wondrous *piṭakas* (ornaments) which, in former times, the delighted gods gave to the Indra-banner—those should be affixed to adorn this banner in due order. ॥ 41 ॥

Order of the bestowal of ornaments: Viśvakarman gave to the Indra-banner the first ornament, square and with luster like red Aśoka; Brahmā and Śaṅkara gave the second girdle (waist-band) of many colors; Indra gave the third ornament of eight corners, furnished with blue and red colors; Yamarāja gave the fourth ornament, black and lustrous, named *masūraka*; Varuṇa gave the fifth ornament, with luster like madder, like a water-whirl, and six-cornered; Vāyu gave the sixth ornament, an armlet (*keyūra*), pervaded by peacock feathers and cloud-blue in color; Kārttikeya gave his seventh ornament, also called *keyūra*, many-colored; Agni gave the eighth ornament, circular and with luster like a flame of fire; Indra gave the ninth neck-ornament with luster like a vaidūrya gem; the sun named Tvaṣṭṛ gave the tenth ornament like a chariot-wheel and lustrous; the Viśvadevas gave the eleventh ornament, called *udvaṃśa*, like a lotus; the sages gave the twelfth ornament, named *niveśa*, with luster like a blue lotus; Jupiter and Venus gave the thirteenth ornament for the head, somewhat uneven above and below, wide in the front, and red like lac-juice. Whatever deity fashioned which ornament for the Indra-banner, that deity is the lord of that ornament—this should be known by the learned. ॥ 42–49 ॥

Measure of the *piṭaka*— time to adorn with *piṭakas*: those versed in śāstra (knowers of the Indra-banner's marks) should adorn the Indra-banner with *piṭakas* on the fourth day (full-moon day), and, being resolved, should recite the mantras to be stated, propounded by King Manu from the tradition. ॥ 51 ॥

Four verses (mantra): "In the way that you—great god Śiva, the Sun, Yama, Indra, the Moon, Kubera, Agni, Varuṇa, the great seers, all the directions, the Apsarases, Śukra, Bṛhaspati, Kārttikeya, and the hosts of winds—have been worshiped with shining, manifold, excellent ornaments—O gods! so in this sacrifice, being pleased in mind, accept all those ornaments. Unborn, imperishable, ever-abiding, one-formed, all-pervading, of the form of the boar, the primeval Person, eternal, of the form of Yama, destroyer of all, Fire, thousand-headed, Indra, worthy of praise—Thee I invoke: O wise Fire, O Protector, O Indra, O well-protecting Lord of the

gods, O Śakra, slayer of Vṛtrāsura, and endowed with fair armies—may our heroic hosts be victorious in battle.” ॥ 52–55 ॥

Time for reciting the aforesaid mantras: while adorning the Indra-banner with *piṭakas*, at the time of raising it, at the time of bringing it into the city, at the time of bathing it, at the time of wreathing it with flower-garlands, and at the time of its immersion, the king, being vowed, should recite the aforesaid mantras. ॥ 56 ॥

What kind of banner should be raised: furnished with parasol, streamer, mirror, fruit, crescent, many kinds of garlands, banana tree, sugarcane, and the guardians of the directions (Indra, Agni, Yama, Nairṛta, Varuṇa, Vāyu, Kubera, and Mahādeva)—the Indra-emblem (banner) should be raised—bound with eight unbroken ropes, made of sturdy wood, provided with two *mātṛkās*, firmly bound, with mechanical bolt, and with maidens fashioned from sound trees. ॥ 57–58 ॥

Order of raising the banner: accompanied continuously by auspicious blessings and salutations uttered by people, together with the sounds of drums, *mṛdaṅga*, conch, and trumpets, attended by Brāhmaṇas repeatedly reciting Vedic sentences, and with auspicious cries—the king should raise the banner. ॥ 59 ॥

What kind of king should raise the banner: holding in hand fruit, curd, ghee, parched grain, honey, and flowers; with bowed head; together with townspeople uttering auspicious words—the king, lord of subjects, should incline Indra’s banner, the lord of the sleepless (gods), toward the enemy’s city for the slaying of the foe. ॥ 60 ॥

Auspicious raising of the banner: the raising that is neither overly swift nor delayed, without shaking, and with garlands and *piṭakas* uninjured, is auspicious. A raising endowed with marks different from these is inauspicious. The royal priest should remove the obstacles by rites of appeasement.

According to Garga— auspicious and inauspicious when the banner is raised: if a flesh-eating bird, owl, pigeon, crow, or a white kite sits upon the Indra-banner, there is extreme fear to the king; if a blue jay (nīlakaṇṭha) sits, there is fear to the crown prince; and if a falcon sits, there is danger to the eyes.

If the banner’s parasol is broken, there is the king’s death; if bees make a hive upon it, there is trouble from thieves; if a meteor falls, the family priest perishes; and if there is a thunderbolt-strike, the chief queen of the king dies.

If the banner’s pennon falls, the queen perishes; if a *piṭaka* falls, there is drought; if the banner breaks in the middle, the minister perishes; if it breaks at the front, the king perishes; if it breaks at the base, the townspeople perish.

If the banner is enveloped by smoke, there is fear from fire; if enveloped by darkness, confusion; and if there, serpents are crushed and die or fall, the ministers perish.

If any portent occurs to the north of the banner, Brāhmaṇas are afflicted; in the east, Kṣatriyas; in the south, Vaiśyas; and if any portent occurs to the west, Śūdras are afflicted.

And if a Śakra-kumārī breaks, courtesans perish.

If, at the time of raising Indra's banner, a rope breaks anywhere, children suffer; and if a *mātṛkā* (the side-wood of the arch) breaks, the queen-mother suffers.

Near the Indra-banner, from the actions of bards and children, future inauspicious or auspicious results occur.

According to Garga— the method of immersion: having, for the increase of his strength, worshiped the standing Indra-banner for four days (from Dvādaśī to full moon), the king, together with his ministers, should, on the fifth day (Pratipadā), perform worship and then immersion. ॥ 67 ॥

Those who worship the Indra-banner—their efficacy: by performing this rite, which was instituted by King Uparicar Vasu and is always performed by kings, the king does not incur fear wrought by enemies. ॥ 68 ॥

Chapter – 44

अथ निराजनाध्यायः **(Nirājana Adhyāya – Chapter on the Rite of Sprinkling/Consecration)**

First, the rule of time— when the Lord, lotus-naveled, whose eyelids are the clouds and whose two eyes are the Moon and the Sun, opens his eyes, then horses, elephants, and men should be given *nirājana* (touching with water). ॥ 1 ॥

Time for performing *nirājana*— on the Dvādaśī, Aṣṭamī, full-moon, or new-moon day of the bright fortnight of Kārtika or Āśvina, one should perform the appeasement called *nirājana*. ॥ 2 ॥

Method of making the arch— in the northeast of the city, on excellent ground, from a fine tree, one should make an arch sixteen cubits high and ten cubits wide. ॥ 3 ॥

Characteristics of the peace-pavilion— it should be made with branches of Vijayasāra, Gūlar, or Arjuna trees, and adorned with fishes, banners, and discs fashioned from bamboos. ॥ 4 ॥

Consecration rule for horses, etc.— tie for strengthening, by means of *pratisara* (a red or yellow thread), Bhilāva, Śālī grain, Kūṭha, and white mustard upon the necks of the horses placed in the peace-pavilion.

According to Kāśyapa— ordinance of the appeasement— in the peace-pavilion, for seven days, one should perform appeasement of the horses with mantras of the Sun, Varuṇa, Viśvedevās, Brahmā, Indra, and Viṣṇu.

Afterwards what should be done with the horses— horses, rendered fearless with cries of *puṇyāha*, sound of conch and kettledrum, and song, and duly worshiped, should not be frightened or struck with whip, etc. ॥ 7 ॥

What should be done after seven days— on the eighth day, on an altar placed before and to the south of the arch, one should establish fire covered with *kuśa* grass and tree-bark.

According to Kāśyapa— characteristics of the materials— having taken equally these herbs—sandalwood, *kūṭha*, madder, yellow orpiment, realgar, *kaṅganī* (foxtail millet), *vacā*, *gudūcī*, collyrium, turmeric, Suvarṇapuṣpī, *agnimanthā* (araṇi), *śvetā* (girikarṇī/aparājitā), *pūrṇakośā*, *mahāśvetā* (white Gaṅgā fruit), *trāyamāṇa* (the fruit of cirāyata), *sahadevī*, *nāgapushpa*, *svaguptā* (kapikacchu), *śatāvarī*, and *somavalī*—placing them into a full jar, one should offer oblations together with honey, milk-pudding, and, along with many kinds of eatables, *yāvakas* (parched grains). ॥ 9–11 ॥

Further characteristics of the materials— make fuel-sticks from the woods of Khair, Ḍhāk, Gūlar, Gambhārī, and Pīpal. And a king who desires prosperity should make the ladle of gold or silver. ॥ 12 ॥

What should be done thereafter— seated facing east upon a tiger skin, near the fire, along with the horse, the physician, and the astrologer, the illustrious king should sit. ॥ 13 ॥

What the astrologers should do— the characteristics of altar, family priest, and fire which are stated in the rite of planetary sacrifice in the book named *Yātrā*, and in the chapter on the marks of Indra's banner, should be understood here in the *Nirājana* chapter.

Afterwards what should be done— having worshiped the horse and the elephant, endowed with the characteristics to be stated, with unbroken rice, white cloth, garlands, incense, etc., and accompanied by various instruments and cries of *puṇyāha*, one should bring them slowly, soothing with sweet voices, to the arch situated near one's own hermitage. ॥ 15–16 ॥

Movements of horse and elephants— the horse brought by the king, if it stands lifting the right foreleg, that king quickly conquers the enemy without toil. If the horse becomes frightened, it is not auspicious for the king. Here, the taking of the horse is only a subsidiary sign; therefore, in place of the horse, the elephant also should be taken. The results of the remaining movements of the elephant and horse should, as I have stated in the book named *Yātrā*, be considered here also according to method.

Afterwards what should be done— the family priest, having consecrated a lump of food, should give it to the horse. If the horse smells or eats a little of that lump of food, it brings victory to the king; otherwise it brings defeat. ॥ 19 ॥

Method of performing *nirājana*— dipping a small twig of Gūlar in the water of the jar, with mantras of appeasement and nourishment, one should touch (sprinkle) the horse, the king, the elephant, and the armies. ॥ 20 ॥

Afterwards what should be done— then the Brāhmaṇas, for the increase of the realm, having performed appeasement, should, reciting the Atharvan mantras stated in the rite of malevolent magic, pierce the chest of the enemy's clay image with a sharp spear.

Afterwards what should be done— thereafter the family priest, having consecrated the bridle, should place it in the horse's mouth. Then the king, upon whom *nirājana* has been performed, seated upon it, should proceed with his armies toward the northeast. ॥ 22 ॥

In what manner the king should go— delighted by the sound of *mṛdaṅga* and conch; with wind perfumed by the dripping rut-waters of elephants; like the autumnal Sun with rays moving at the edges of the gems set in the crown; or like the Himalaya, thronged as if with rows of swans, with white chowries waving that enjoy the fragrant wind, with beautiful garlands and garments; or the king bearing the luster of the rainbow because adorned with crowns, earrings, and arms filled with multicolored gems and diamonds; or the king like Indra surrounded by gods, along with flying horses, elephants rending the earth, and men subduing the enemy, should go. ॥ 23–26 ॥

In what manner the king should go— or the king, adorned with a white garland set with diamonds and pearls, white turban, white sandal, and white garments, bearing a parasol and seated upon an elephant, should go like Venus stationed above the clouds and beneath the Moon. Here, in place of the cloud one should understand the elephant; in place of the Moon, the parasol; and in place of Venus, the king. ॥ 27 ॥

Movements of the armies— the king whose armies are composed of joyful men, horses, and elephants; shining with spotless swords, etc.; devoid of defect; and terrible to the enemy—such a king quickly conquers the earth. ॥ 28 ॥

Chapter – 45

अथ खञ्जनकलक्षणाध्यायः **(Khañjana-Ka-Lakṣaṇa Adhyāya – Chapter on the Signs of the Wagtail)**

First, the statement from tradition— at the first sighting of the bird named *khañjana* (wagtail), the results which Garga and other sages have declared I state here. ॥ 1 ॥

Four kinds of *khañjana* and their results— the *khañjana* bird which has a stout body, is elevated, and has a black throat is called *bhadra*; if it is seen, it is auspicious. That *khañjana* whose face up to the throat is black is called *saṃpūrṇa*; it fulfills all desires. That *khañjana* whose throat has a black dot and whose cheeks are white is called *rikta*; it renders all void. And the yellow *khañjana* is called *gopīta*; if it is seen, it causes distress.

According to Kāśyapa— results of the sighting of *khañjana* according to place— if the *khañjana* bird is seen upon a tree filled with sweet and fragrant fruits and flowers; on a holy reservoir; upon the heads of elephants, horses, or serpents; upon a temple, flower-garden, or upper story; near cows, cowshed, the place of the gathering of good men, sacrifice, marriage, and such

festive places; near a king or Brāhmaṇas; upon an elephant, horse, parasol, banner, chowrie, etc.; near gold; upon a lotus, blue lotus; upon a worshiped place or a carried object; upon a vessel of curd or heap of grain—the sight is auspicious for the seer. ‖ 4–6 ‖

Further results by place— if the *khañjana* is seen sitting in mud, delicious food is obtained; if upon dung, much milk, curd, and ghee; if upon *dūrvā* grass, cloth is obtained; and if upon a cart, the country is destroyed. If the *khañjana* is seen upon the roof of a house, there is loss of wealth; upon a pierced object made of leather, there is bondage; in an impure place, disease; upon a goat or sheep, meeting with a friend very soon. ‖ 7–8 ‖

Inauspicious places for sighting *khañjana*— if the *khañjana* is seen upon buffalo, camel, ass, cremation ground, corner of a house, clod of earth, attic, enclosing wall, ashes, or hair, there occurs inauspicious result in the form of fear of death and disease. ‖ 9 ‖

Auspicious/inauspicious result of *khañjana* sighting— if the *khañjana* is seen moving both wings, it is not auspicious. If seen drinking water in a river (some accept the reading "*vārivāhasthaḥ*"—in a place where water flows), it is auspicious. If seen at sunrise, it gives auspicious result; if at sunset, inauspicious. ‖ 10 ‖

Auspicious/inauspicious for the king from *khañjana* sighting— after performing *nirājana*, in whichever direction the king, while going, sees the *khañjana*, by going in that direction the enemy is quickly brought under control. ‖ 11 ‖

Demonstration of trust in śāstra— beneath the place where the *khañjana* copulates there is treasure; beneath where it vomits there is glass; and beneath where it defecates there is coal. To remove (test) this marvel, one should dig the earth there.

According to Kāśyapa— further auspicious/inauspicious results— if a dead *khañjana* is seen, the seer dies; if maimed, the seer becomes maimed; if sick, the seer becomes ill. If seen entering the house from the front, it brings wealth; and if seen flying in the sky, there is meeting with relatives. ‖ 13 ‖

Ordinance after an auspicious *khañjana* sighting— the king, seeing the *khañjana* bird endowed with auspicious marks in an auspicious place, should offer an *argha* with fragrant flowers and incense. By doing thus, the honored auspicious result increases. ‖ 14 ‖

Ordinance after seeing an inauspicious *khañjana*— seeing even an inauspicious-result-giving *khañjana*, if the king becomes intent upon worship of Brāhmaṇa, guru, good men, and deities, then he does not obtain the inauspicious result—provided he does not eat meat for seven days. ‖ 15 ‖

Period within which the result occurs— the result of the first sighting of the *khañjana* occurs within a year; thereafter, the result of each day's sighting occurs on that very day. According to direction, place, body-form, ascendant, lunar mansion, calm and bright direction, etc., having observed auspicious or inauspicious indications, one should declare the result by one's judgment.

Chapter – 46

अथ उत्पाताध्यायः **(Utpāta Adhyāya – Chapter on Portents)**

Presentation of what is in the tradition— the summary here is of those portents which the great sage Garga described before Atri.

According to the *Samāsa Saṃhitā*— cause of portents— from the discourtesy (improper conduct) of men, sins accumulate; from those sins arise disturbances. Divine, atmospheric, and terrestrial portents indicate those disturbances.

According to Garga— further cause in the arising of portents— because of the discourtesy of men, the deities become displeased and produce those portents. For their pacification the king should perform appeasement rites.

Characteristics of divine, atmospheric, and terrestrial portents— the name “divine” (daivya) applies to corruption/aberration of the Sun and the other planets and the lunar mansions; the name “atmospheric” (āntarikṣa) applies to portents arising from meteors, thunderclap, corrupted wind, halos of Sun and Moon, Gandharva-city, rainbow, etc. (Rohita, Airāvata, staff, and parigha); the name “terrestrial” (bhauma) applies to a moving thing becoming still and a still thing becoming moving. This terrestrial portent, being struck by appeasement, is destroyed; the atmospheric portent is reduced by appeasement; and the divine portent is not destroyed even by appeasement—this is the view of some teacher.

According to the *Samāsa Saṃhitā*— statement of my own view— by giving much gold, grain, cows, and land, even a divine portent becomes appeased—what then of the atmospheric and terrestrial (i.e., those two are certainly appeased). And by milking a cow upon the ground in a temple of Śiva and by a crore-number of oblations, a divine portent is appeased. ॥ 6 ॥

Place where the king receives the fruit of divine portents— in these eight: his own body, son, treasury, vehicle, city, wife, family priest, and country, the king receives the result of the divinely-caused portents.

According to Garga—

Exposition of portents— the causeless splitting, trembling, sweating, weeping, falling, sounding, etc. (vomiting and slipping aside) of a liṅga of Śiva, of an image of a deity, and of holy places, is for the destruction of the king and the country.

Exposition of portents— at holy places, at the time of procession (*yātrā*), the breaking, falling, overturning, jamming, or sticking somewhere of the cart’s axle, wheel, yoke, or banner is not auspicious for the country and the king. ॥ 9 ॥

Declaration of results through corrupted objects— corruption arising in a sage, in Dharma, in the father, and in Brahmā gives bad result to Brāhmaṇas; corruption arising in Mahādeva and in the guardians of the worlds (Indra, etc.) to cattle; corruption arising in Bṛhaspati, Śukra, and Śanaiścara to family priests; corruption arising in Viṣṇu to men; corruption arising in Kārttikeya and the god Viśākha to regional kings; corruption arising in Vedavyāsa to the minister; corruption arising in Gaṇeśa to the commander; corruption arising in Brahmā and Viśvakarman to men; corruption arising in the sons of the gods to princes; corruption arising in the daughters of the gods to princesses; corruption arising in the celestial women to royal wives; corruption arising in the servants of the gods to the kings' servants—likewise, corruption arising in demons to princes, in *piśācas* to princesses, in Yakṣas to royal wives, and in Nāgas to royal servants—these are inauspicious in result. The results of these portents occur in eight months. ॥ 10–14 ॥

Method of appeasement for the aforesaid portents— knowing that there is corruption in a deity, a family priest who is pure, restrained, bathed, and vowed for three days should, with bathing, flowers, sandal, cloth, food mixed with curd, and offerings, duly worship the corrupted deities. And making *sthālīpāka* (charu), he should, reciting that deity's mantra, offer oblations in fire. ॥ 15–16 ॥

Measure of time and efficacy of appeasement— upon the aforesaid divine corruption occurring, the king should for seven nights perform worship of Brāhmaṇas and deities, festivals of song, dance, and night-vigils. Thus, for those kings by whom it is done, through the aforesaid appeasement and gifts, the evil result of the obstructing portent does not occur.

Athāgni-Vaikṛtam (And now, the corruption related to fire)—

Further portents— in the realm of that king, if flame appears without fire (i.e., without fuel igniting) and a wood-supplied fire does not blaze, then that king and the country suffer. ॥ 18 ॥

Marks of portents and their results— if there is causeless burning in water, flesh, and moist things, the king dies; if burning arises in swords, etc., there is terrible war; and if fire is not obtainable among the armies or in the city, there is fear from fire. ॥ 19 ॥

Other portents and their results— if a temple (house of the deity), house, arch, or banner is burnt without fire or by lightning, then after six months certainly the armies of another king arrive. ॥ 20 ॥

Further, other portents and their results— if without fire smoke appears, or by day dust or darkness is seen, there is great fear. And if at night, in a cloudless sky, the stars are not seen, and by day they are seen, it is greatly fear-causing.

According to Garga— further, other portents and their results— if in city, beasts, birds, or men, burning arises without fire, it is greatly fear-causing. If smoke, flame, or sparks of fire are seen in bed, cloth, or hair, the master dies.

Further, other portents and their results— burning arising in swords, etc.; their moving; their making sound; their coming out of the scabbard; or any other kind of corruption arising in weapons— all these quickly bring about dreadful war in the kingdom. ॥ 23 ॥

Method of appeasement for the aforesaid portents— (for the inauspicious results spoken from verse 18 here up to this point, arising from corruption related to fire) one should offer oblations into fire with the wood of the *āk* plant, with mustard, and with ghee. In this way the inauspicious result is appeased. In this portent, gold should be given as a fee to the Brāhmaṇas. ॥ 24 ॥

Atha Vṛkṣa-Vaikṛtam (And now, corruption related to trees)—

Marks and results of portents arising from tree-corruption— from a branch of a tree suddenly breaking, there are war preparations; from trees "laughing," there is destruction of the country; and from trees "weeping," there is increase of disease. ॥ 25 ॥

Further portents and their results— if, in a season forbidden (out of season), flowers and fruits arise on trees, there is dissension in the kingdom; if many flowers arise on a small tree, there is destruction of children; and if milk issues from trees, there is destruction of commodities.

Chapter – 46

अथ उत्पाताध्यायः **(Utpāta Adhyāya – Chapter on Portents)**

According to Garga— further marks of portents and their results— when liquor flows from a tree, vehicles (such as horses, etc.) are destroyed; when blood flows, there is war; when honey flows, there is disease; when oil flows, there is fear of famine; and when water flows from a tree, there is great fear. ॥ 27 ॥

Further marks of portents and their results— when withered trees sprout again, there is destruction of strength and grain; and when trees that have fallen rise up of themselves, there is fear caused by divinity (fate). ॥ 28 ॥

Further marks of portents and their results— the arising of flowers and fruits on a principal tree is for the destruction of the king; and smoke or a flame of fire upon that (principal tree) also is for the destruction of the king. ॥ 29 ॥

Further marks of portents and their results— if trees move or some kind of sound issues from them, men perish. The fruits of all tree-corruptions ripen in ten months. ॥ 30 ॥

Method of appeasement for the aforesaid portents— in this portent, placing a parasol upon the corrupted tree, which has been worshiped with fragrant substances, incense, and cloths, one should recite the mantras of the eleven Rudras; with the mantra "*rudrebhyaḥ svāhā*" one should perform only six oblations; one should feed Brāhmaṇas with milk-pudding mixed with ghee; and

in this tree-corruption portent, the sages who are solicitous of beings' welfare have prescribed the gift of land as fee. ॥ 31–32 ॥

Atha Sasyavaikṛtam (And now, corruption related to crops)—

Marks and results of portents arising from crops— if on one stalk of lotus, barley, etc. (wheat and kodo-little millet) there arise two or three ears, the lord of the field dies. Likewise, if there are twin flowers or fruits, the lord of that (field) dies. ॥ 33 ॥

Further marks of portents and their results— if there is excessive increase of grains, and on one tree there arise many kinds of fruits and flowers, certainly an invasion (arrival of an enemy army) occurs. ॥ 34 ॥

Further marks of portents and their results— if from a measure of sesame only half the measure of oil comes forth, or no oil at all comes from sesame, and tastelessness is perceived in food, there is great fear. ॥ 35 ॥

Method of appeasement for the aforesaid portents— the corrupted flowers and fruits should be taken outside the village; one should prepare *caru* for the deity Soma; and for appeasement a he-goat also should be given in gift. Seeing the aforesaid corruption in the grains, first that very field should be given to a Brāhmaṇa, and by making an earthen *caru* in the middle of that field, the fault arising from the land does not accrue to the owner. ॥ 36–37 ॥

Atha Vṛṣṭivaikṛtam (And now, corruption related to rain)—

Marks and results of rain-related portents— if there is no rain, there is famine; if there is excessive rain, there is famine and fear from enemies; if rain occurs in a friendly season different from the rainy season, there is disease; and if there is rain without clouds, the king dies. ॥ 38 ॥

Marks and results of season-related portents— when there is inversion between cold and heat—i.e., cold occurring in the time of heat and heat occurring in the time of cold—and when that which is the nature (dharma) of a season does not occur properly, then after six months there is fear to the country and fear of disease caused by fate (sins of previous births). ॥ 39 ॥

Marks and results of rain-related portents— if in a season different from the rainy season it rains continuously for one week, the chief king dies; if there is rain of blood, there is war; and if there is rain of flesh, bone, fat, etc. (ghee and oil), pestilence (plague) occurs. If there is rain of grain, gold, tree-bark, fruits, flowers, etc. (leaves, etc.), there is fear; and if there is rain of coal and dust, the city is destroyed. ॥ 40–41 ॥

Mark of a rain-related portent— if there is hail without clouds, or rain of corrupted creatures, or even when there is excessive rain there are places with holes (i.e., drought-spots), then there is danger to the grains from ruin (excess rain, etc.). ॥ 42 ॥

Marks and results of rain-related portents— if there is rain of milk, ghee, honey, blood, or hot water, the country is destroyed; and if there is rain of blood, there is war among kings. (This verse is not in other books.) ॥ 43 ॥

Marks and results of shadow-related portents— even when the Sun's rays are clear, if the shadows of trees and other objects are not seen, or are seen reversed, great fear arises in the country. ॥ 44 ॥

Marks and results of rainbow-related portents— if in a sky devoid of clouds a rainbow is seen by day or by night in the east or west direction, there is extreme famine. ॥ 45 ॥

Method of appeasement for the aforesaid portents— at the time of portents arising from corruption of Sun, Moon, clouds, and wind, one should perform sacrifice; and gifts of Śālī grain, cooked food, cows, and gold should be given to Brāhmaṇas. Then the sin is appeased. ॥ 46 ॥

Atha Jalavaikṛtam (And now, corruption related to water)—

Marks and results of river-related portents— if rivers flowing through the middle of a city or in the moat go far away, or lakes, etc., that do not dry up dry up, soon the city becomes devoid of beings. If oil, blood, or flesh begins to flow in the rivers, or the water becomes scant and impure, after six months an invading army arrives. ॥ 47–48 ॥

Marks and results of well-related portents— flames of fire in a well, smoke, boiling of water, the sound of weeping, song, or any other sound bring about people's death. ॥ 49 ॥

Marks and results of reservoir-related portents— water issuing from ground not dug, reversal in the smell and tastes of water, and corruption arising in reservoirs produce fear of fire. The method of its appeasement is stated next. ॥ 50 ॥

Method of appeasement for the aforesaid portents— when there is corruption of water, one should perform worship, recitation, and oblation with the mantras of Varuṇa. By doing thus, the inauspicious result is averted. ॥ 51 ॥

Atha Prasavavaikṛtam (And now, corruption related to births)—

Marks and results of birth-related portents— when women have any birth-corruption (offspring of the form of horse, elephant, bull, serpent, etc.), or when two, three, four, etc., children are born at once, or when birth occurs before or after the proper time (as determined from "*tatsamaye candrasahito dvirasāṃśako ya*," etc.), the country and the family are destroyed. ॥ 52 ॥

Marks and results of animal birth-related portents— if a mare, she-camel, buffalo-cow, cow, or she-elephant bears two young at once, those (horse, etc.) perish. After six months the result of birth-corruption occurs. For its appeasement, two verses from Garga are given below.

According to Garga— method of appeasement for birth-portents— a man desiring his own welfare should take the corrupted women and leave them in another country; he should

propitiate Brāhmaṇas according to his desire and also perform appeasement for this portent. He should take the corrupted four-footed animals away from the herd and leave them in another place. Otherwise, it destroys the city, the lord of the city, and the herd. ॥ 54–55 ॥

Atha Catuṣpadavaikṛtam (And now, corruption related to quadrupeds)—

Marks and results of quadruped-related portents— if animals of one species mate with animals of another species, and if cows or bulls drink one another's udder, then after three months, certainly an invading army arrives. For its removal there are two verses of Garga below.

According to Garga— method of appeasement for the aforesaid portents— by releasing the corrupted animals or giving them elsewhere, the quadruped-born portents are quickly appeased. In this portent, one should satisfy Brāhmaṇas, perform recitation and oblation, and perform Brahmā's sacrifice with *caru*, an animal, and the Prajāpatya mantras; and one should give very much food as fee. ॥ 58–59 ॥

Atha Vāyavyavaikṛtam (And now, corruption related to wind/vehicles)—

Marks and results of wind/vehicle portents— if horses and other mounts run off separated from the rider, do not go with the rider, and a chariot-wheel sinks into the ground or breaks, there is fear to the realm.

Marks and results of instrument-related portents— if song or the sound of trumpet is heard in the sky, or a stationary thing appears to move and a moving thing appears stationary, there is death and disease; or if from the sounding of a trumpet a corrupted sound occurs, there is defeat from enemies. ॥ 61 ॥

Marks and results of trumpet-sound portents— if without being blown a trumpet sounds, and upon being blown it does not sound, or many kinds of sounds arise, then an enemy army arrives and the king dies. ॥ 62 ॥

Marks and results of house-utensil-related portents— from the sudden conjunction of ox and plough; from corruption arising in household utensils such as ladle, winnowing basket, etc.; and from the corrupted cry of a jackal—there is fear, so say the sages. ॥ 63 ॥

Method of appeasement for the aforesaid portents— in these aforesaid wind-corruptions, one should worship the Wind-god with *sattū* (parched-flour offering). Being observant of rule, Brāhmaṇas should recite the five ṛks beginning with "*āvāyur*," etc. One should satisfy Brāhmaṇas with milk-pudding and, making effort, perform oblations giving much food as fee. ॥ 64–65 ॥

Atha Mṛga-Pakṣy-Ādi-Vaikṛtam (And now, corruption related to beasts, birds, etc.)—

Marks and results of portents arising from beasts and birds— if birds that dwell in the city go to the forest, and birds that dwell in the forest enter the city fearlessly; or day-wandering birds move at night, and night-wandering birds move by day; and at sunrise and sunset, beasts and

birds dwelling in the forest, facing the Sun, sit forming circles, or seen all assembling together making great sound—these are fear-giving. ॥ 66–68 ॥

Marks and results from the hawk, etc.— if a hawk (*śyena*) appears as if crying excessively; if a jackal, facing the Sun, howls at the city-gate; and if a pigeon or owl enters the royal palace—these are fear-giving. In some places, instead of *śyena* the reading *śvānaḥ* (dog) is found.

According to Garga— marks and results from cock and other birds— if at twilight the cock crows, and at the beginning of the Hemanta season the cuckoo calls; and if hawks and other flesh-eating birds in the sky move in circular paths in a rightward (pradakṣiṇa) order—these are fear-giving. If flocks of birds fall upon the house, principal tree, arch (city-gate), or house-door; and if upon these very house, etc., there arise a honeycomb, an ant-hill, and lotuses—these are for destruction. ॥ 69–70 ॥

Marks and results from dogs and other animals— if dogs bring into the house a bone or some part of a corpse, pestilence occurs; and if beasts or weapons speak like men, the king dies—so say the sages.

Method of appeasement for the aforesaid portents— when the aforesaid corruptions occur among beasts and birds, one should perform oblations with fees; through five Brāhmaṇas one should have recited the mantra beginning "*devāḥ kapota*," etc., and through one Brāhmaṇa the mantra beginning "*sudevā*," etc.; one should give, along with fee, the gift of a cow; and one should recite the *Śākuna Sūkta* or the mantras called *Vedaśirāṃsi*, etc. ॥ 72–73 ॥

Atha Śakra-Dhvaja-Candra-Kīla-Kādi-Vaikṛtam (And now, corruption related to Indra's banner, the lunar pin, etc.)—

Marks and results related to Indra's banner— from the falling or breaking of Indra's banner, Indra's pin, and the pillar-gate; and from the falling or breaking of the doors, arch, and banner—the king dies. ॥ 74 ॥

Marks and results of sudden luminescences, etc.— the occurrence of radiance at both twilights; the arising of smoke in forest or in a place without fire; the splitting or trembling of ground that has no holes—these are fear-causing. ॥ 75 ॥

Destruction of a country due to the king's conduct— the country in which the king is a devotee of hypocrites and atheists, devoid of the conduct of good men, wrathful, a seeker of others' faults, wicked, and always desirous of war—that country is destroyed. ॥ 76 ॥

Result of portents arising from children's actions— where boys, taking in hand weapons, sticks, and stones, saying "strike, seize, cut, break," strike one another—there, fear quickly occurs.

According to Parāśara— result of householder's image-portent— the house whose wall has painted upon it, with coal, red ochre, etc. (yellow and blue) colors, distorted images of dead

men, or images made with coal, etc., of the householder—that house is quickly destroyed. ॥ 78 ॥

Marks and results of house-corruption portents— a house that is covered with spiders' webs, devoid of worship of deities at both twilights, daily full of quarrel, and associated with impure women—its destruction approaches. ॥ 79 ॥

Result of seeing a demon— if a demon is seen directly, pestilence occurs very quickly. For the destruction of these aforesaid portents, sage Garga has prescribed appeasement in the manner stated below.

Method of appeasement for the aforesaid portents— one should perform greater appeasement for the aforesaid portents; one should make offerings and more food; and one should perform greater worship of Indra and Indrāṇī. ॥ 81 ॥

Time of portents that are fruitless— the portents that arise at the time of the king's destruction, calamity upon the country, the rising of Ketu, and the eclipses of Sun and Moon, and those that arise in their own season as stated below, are not blameworthy as portents. ॥ 82 ॥

Portents arising from the nature of the seasons— the portents that do not produce fault as arising from the nature of the seasons should be known by the verses stated below, composed by the sage's son, said briefly. ॥ 83 ॥

Natural portents in spring— thunderbolt (lightning), *aśani* (fall of stones or meteor), earthquake, blazing twilight, thunderclap, sounds, halos of Sun and Moon, dust, smoke, sunrise/sunset of a red-colored Sun, food issuing from trees, the arising of sweet and other tastes and of oil, increase of passion in cows and birds—these portents in Caitra and Vaiśākha are for welfare.

Natural portents in the summer season— sky always soiled by meteors, yellow discs of Sun and Moon, sound of flame without fire, smoke, dust, and a twilight red like a red lotus, struck by smoke, dust, and wind; sky like the sea with waves; the drying up of water in rivers—these portents in summer (Jyeṣṭha and Āṣāḍha) are auspicious. ॥ 86–87 ॥

Natural portents in the rainy season— rainbow; halos of Sun and Moon; lightning; sprouting in dry trees; the earth trembling, turning over, changing form, making sound, splitting; increase of lakes; rivers rising; abundance of water in tanks, wells, ponds, etc.; mountains and houses becoming mobile—these portents in the rainy season are auspicious. ॥ 88–89 ॥

Natural portents in autumn— the sight of divine women, Gandharvas, chariots, and wondrous things; sight of planets and lunar mansions by day; sounds of song and instruments in forests and mountains; increase of grain and loss of water—these in autumn are sinless (auspicious). ॥ 90–91 ॥

Natural portents in Hemanta— coldness in wind and frost (snow); the sounds of deer and birds; the sight of demons, *yakṣas*, and such beings; speech without a man; sky, forest, mountains,

and directions with darkness; and the Sun's rising and setting at high places—these in Hemanta are auspicious. ॥ 92–93 ॥

Natural portents in Śiśira— snowfall; wind-related portents; wondrous sight of fearful creatures; a night black like collyrium and a sky yellowed by meteors; birth from women's wombs of beings with limbs of various kinds (like those of horse, etc.); birth from the wombs of cow, goat, horse, deer, and birds of alien species; corruption in leaves, creepers, and sprouts—these in Śiśira are auspicious. ॥ 94–95 ॥

Special note— these portents arising from the nature of the seasons give auspicious results in their own season; but if seen in another season, they cause great affliction. ॥ 96 ॥

Creatures that speak truth— the song of madmen, the speech of children, and the speech of women are not transgressed—i.e., whatever they speak becomes true. ॥ 97 ॥

Reason for speaking truth— this Sarasvatī in the form of truth, who does not speak without prompting, first wandered among the gods; afterwards she came to men. ॥ 98 ॥

Efficacy of those who know the science of portents— even men who do not know computation (astronomy) become renowned and dear to the king by knowing the aforesaid portents. This saying of the sage is declared secret; knowing which, a man becomes a seer of the three times. ॥ 99 ॥

Chapter – 47

अथ मयूरचित्रकाध्यायः (Mayūra Chitraka Adhyāya – Chapter on the Peacock Diagram)

Here, again, the reason for writing the Mayūra Chitraka—

Formerly, in the sections on the four (Moon conjunctions), wars, paths (motions of Venus), and others (circles), I (Varāhamihira) have described in detail the auspicious and inauspicious results arising from divine and atmospheric influences. Again taking up the same topic here and speaking briefly is not proper for Varāhamihira, because elaboration is his defect. However, the learned should not say that repetition is a fault here. Hence, this section named Barhi-Chitraka is a renowned part of the Saṁhitā. Only by having repeated results will the proper form of this Mayūra Chitraka be known, that is, besides the former statements of results, the same fruits described again here in connection with Mayūra Chitraka form its true nature. Therefore, even if I do not say it again, I shall be blamed. ॥ १–३ ॥

Result according to planetary motion—

If the planets, being luminous, move in the northern paths (named Nāga, Gaja, and Airāvata paths), they cause prosperity, abundance, and welfare. If, being devoid of light, they move in the southern paths (named Mṛga, Aja, and Dahana paths), they cause famine, fear of thieves, and death.

Here, Garga—
Result according to the motion of Venus and Jupiter—
If Venus is situated in the storehouse (Maghā Nakṣatra) and Jupiter in Puṣya Nakṣatra, then kings are free from mutual enmity and happy, and the people are pleased and free from disease.

Here, Garga—
Result according to the motion of the Moon and other planets—
If, leaving the Sun, the other planets (from the Moon onward) afflict (by moving in the southern path or by piercing the Yogatārā) the Nakṣatras Kṛttikā, Maghā, Rohiṇī, Śravaṇā, or Jyeṣṭhā, then the western direction becomes afflicted by injustice.

Here is the statement of Garga—
Result according to the motion of the Moon and other planets—
If at twilight the Moon and other planets appear in the eastern direction like banners, then there occurs conflict among the kings situated in the east. If they are seen in the middle of the sky, affliction occurs in the central region. But this result occurs only when those planets are rough; if they have clear and beautiful rays, then not—that is, they do not afflict the eastern direction or the central region. ॥ ७ ॥

Result according to the motion of the Moon and other planets—
If the Moon and other planets are situated in the southern direction, they destroy the clouds in the south. If these planets are of small disc and rough, then they cause quarrels; if they are of large disc and endowed with rays, then they are auspicious. ॥ ८ ॥

Result according to the motion of the Moon and other planets—
If the Moon and other planets, being of clear rays, are situated in the northern path, they bring peace among the kings situated in the north. If of small disc or of color resembling ashes, they cause defects among the kings of that direction.

Here, Garga—
Result according to the appearance of planets and stars—
If the stars of planets and Nakṣatras appear filled with smoke, flame, or fire-particles, or appear devoid of light without cause, then in that region (the country corresponding to that planet or Nakṣatra as described in Graha-bhakti or Kurma division) destruction of the king along with his people occurs. ॥ १० ॥

Result of the appearance of two or three Suns or Moons—
At the time when two Moons are seen in the sky, there occurs soon the increase of Brāhmaṇas and auspiciousness. If two Suns are seen, war arises among the Kṣatriyas; and if three or four Suns are seen, destruction of the world takes place.

Here, Garga—

Result according to the motion of Ketu—
If Ketu touches the constellation of the Seven Sages (Saptarṣi Maṇḍala), Abhijit Nakṣatra,

Dhruva star, or Jyeṣṭhā Nakṣatra, it causes destruction of clouds, inauspiciousness, loss of works, and grief. If it touches Āśleṣā Nakṣatra, it surely causes destruction of rain, and people, afflicted by hunger and thirst together with children, depart and perish. ॥ १२ ॥

Result according to the motion of Saturn—
If Saturn, moving in the eastern group (the seven Nakṣatras beginning with Kṛttikā), becomes retrograde, it causes famine, great opposition among friends, and lack of rain.

Here, Garga—
Result of Rohiṇī-cart being pierced by Saturn, Mars, or Ketu—
If the Rohiṇī-cart is pierced by Saturn, Mars, or Ketu, then what inauspiciousness shall I describe? The whole world falls into an ocean of calamity, that is, only inauspiciousness appears on all sides.

Here, Garga—

Result of the rising of Ketu—
At the time when Ketu is always visible or moves throughout the entire circle of Nakṣatras, the whole world, along with all moving and non-moving beings, experiences uniformly adverse results of former origin. ॥ १५ ॥

Result according to the motion of the Moon—
If the Moon appears crescent-shaped, rough, and of red color, it causes famine and fear of mutual war among armies. And the side toward which the chord (of the crescent) lies becomes victorious among kings of that side. If the horn is like that of a cow, it causes destruction of cows and grains, and if it appears blazing or smoky, it portends death of kings. ॥ १६ ॥

Result according to the motion of the Moon—
If the Moon, being smooth, thick, with equal horns, vast and elevated, is seen in the northern path (Nāga Vīthi), viewed by benefic planets and not joined with malefic planets, it bestows great joy upon men. ॥ १७ ॥

Result according to the motion of the Moon—
If the Moon, going into Maghā, Anurādhā, Jyeṣṭhā, Viśākhā, and Citrā Nakṣatras, moves through the southern path, it becomes inauspicious; and if it moves through the northern path or the middle, it is auspicious. ॥ १८ ॥

Characteristics of Parigha and other phenomena—
At sunrise or sunset, the oblique line of clouds is called Parigha; the circle opposite the Sun is called Pratisūrya-paridhi; and the clear line resembling a rainbow is called Daṇḍa. The long rays of the Sun at rising or setting are called Amogha; the fragments of clear rainbow are called Rohita; and the long straight rainbow is called Airāvata. ॥ १९–२० ॥

Characteristic of twilight and the result from the color of the disc at that time—
After the half-set solar disc, until the stars become clearly visible, it is the western twilight; and from the time of the fading of star-light until the half-risen solar disc, it is the eastern twilight.

During this twilight, one should predict auspicious and inauspicious results by means of the signs to be described: if all the discs situated in the sky are smooth, there will be quick rain; if rough, there will be fear. ॥ २१–२२ ॥

Method of knowing rainfall—
When the Parigha is unbroken, the sky is clear, the Sun has dark-colored rays, smooth brilliance, white-colored rainbow, lightning toward the northeast, and the trees are covered with smooth or Sun-ray-filled clouds, then there will be rain. Also, if in the evening a large cloud covers the solar disc, rain occurs. ॥ २३ ॥

Result according to the solar disc—
In the country where the solar disc appears broken, crooked, black, small, or covered with marks resembling crows and other birds, or rough, there the destruction of the king generally occurs.

Here, Garga—
Omens for kings according to birds—
When flocks of flesh-eating birds move behind the armies of a king desirous of war, those armies must flee from battle. If the birds move ahead of the armies, there is victory. ॥ २५ ॥

Result through the solar disc—
If at sunrise or sunset the image of Gandharva-city with banner covers the solar disc, it should be said that the king will obtain a terrible war.

And Garga—
Regional auspicious and inauspicious results according to twilight—
If at twilight birds and wild animals facing the direction opposite the Sun utter sweet sounds, and pure gentle winds blow, it is auspicious. If the twilight appears filled with dust, rough, and of reddish color, it causes destruction of regions. ॥ २७ ॥

Display of one’s own skill—
Whatever subjects Garga and other sages have described in detail, though involving the fault of repetition, I have spoken all those in this chapter named Mayūra Chitraka. Even then, if wicked persons continue to speak, what harm is there to me? For, even when hearing the voice of the cuckoo, the crow caws—this is its natural sound, not from a wish to surpass the cuckoo. ॥ २८ ॥

Chapter – 48
अथ पुष्यस्नानाध्यायः (Puṣya Snāna Adhyāya – Chapter on the Puṣya Bath)

First, the presentation of the injunction—
In this world, the king, who is the root form of Kṛṣṇa as the embodiment of the people, is such that by his downfall arises inauspiciousness for the subjects and by his consecration auspiciousness. Therefore, one should be concerned for the king’s auspicious increase. ॥ १ ॥

Here, the presentation of the injunction—
The peace-rite which Brahmā had spoken to Bṛhaspati for the sake of Indra, that very one, obtained and spoken by Ṛddha-Garga Ācārya to Bhāguri, listen to in the same manner.

Here, Ṛddha-Garga—

Method of performing the Puṣya bath—
The king should perform the Puṣya bath through the astrologer and priest. There is no other means purer and more capable of destroying all calamities than this. ॥ ३ ॥

Place for performing the Puṣya bath—
The king should perform the Puṣya bath near a forest free from slimy (Lasodā), Akṣa (Bahedā), thorny (Khair etc.), pungent, bitter (Bimbu etc.), and foul-smelling trees; free from inauspicious birds like owls and vultures; and full of new trees, bushes, and creepers, with leaves and tender shoots, beautiful and sweet (sap-bearing) trees. ॥ ४–५ ॥

Another place for performing the Puṣya bath—
The Puṣya bath should be done near a forest abounding in the pleasant sounds of birds like cock, partridge, parrot, peacock, hundred-petaled (woodpecker), chāṣa (blue jay), hārīta (parakeet), krakara (chukar), monkey-water-bird, vajula, pigeon, śrīkaṇṭha, enjoying the juice of flowers, intoxicated bees, excellent cuckoos, and other beautiful birds. ॥ ६–७ ॥

Another place for performing the Puṣya bath—
The Puṣya bath should be performed on the beautiful thighs (banks) of river-maidens, whose waters are wounded by the nails of aquatic birds and delightful to sight and mind. ॥ ८ ॥

Another place for performing the Puṣya bath—
The Puṣya bath should be done on the bank of a lake having canopy-like cranes, kuraras, and sarasa birds flying above, and with eyes resembling fully blossomed blue lotuses, equal in brilliance to Indra. ॥ ९ ॥

Another place for performing the Puṣya bath—
The Puṣya bath should be done on the bank (thigh) of a pond-woman whose face is like a blossomed lotus, whose speech is sweet like the sound of swans, and whose high breasts are like unopened lotus buds. ॥ १० ॥

Another place for performing the Puṣya bath—
The Puṣya bath should be done in the cow-shed where foam and dung fall from the chewing of cows, where their hoofs strike the ground, and where the young calves, having obtained freedom, roar and leap in joy. ॥ ११ ॥

Another place for performing the Puṣya bath—
Or, the Puṣya bath should be done on the shore of an ocean filled with gem-laden ships that have safely arrived, where the upper parts of the dense Nichula (sea-fruit) trees are immersed in water and the nearby region is adorned with white birds. ॥ १२ ॥

Another place for performing the Puṣya bath—
Or, the Puṣya bath should be done in the hermitage of sages where lions have conquered deer-like anger through peace—that is, where deer and lions dwell together—and where, receiving fearlessness, the young of birds and beasts wander fearlessly. ॥ १३ ॥

Another place for performing the Puṣya bath—
Or, the Puṣya bath should be done in a house adorned with doe-eyed women who move slowly due to the weight of girdles, anklets, and heavy thighs, and who speak sweetly like cuckoos. ॥ १४ ॥

Another place for performing the Puṣya bath—
Or, the Puṣya bath should be done in a holy place of the gods, at a sacred ford, reservoir, garden, beautiful land, or on the low ground toward the east or north where water flows in a circumambulatory course.

Garga—

Characteristics of the ground—
Ground that is free from ash, charcoal, bone, barren soil, husk, hair, pits, and from creatures like crabs, burrowing animals such as mice, etc., and termites, that has inner substance, is endowed with fragrance, is clean, pleasant, and level—this is for victory. For the encampment of armies also, the aforesaid ground should be employed with proper judgment. ॥ १६-१०॥

Procedure there—
Astrologer, minister, and sacrificer should, at night, go out from the city and, to the east, north, or northeast of the aforesaid place, with humility the officiating priest should offer bali with milk-rice (khīr), unbroken rice (akṣata), curd, and flowers; thereafter he should recite the mantra of invocation as spoken by the sages. ॥ १८-१९ ॥

Mantra of invocation—
“Let those deities who desire worship herein, the directions, the Nāgas, the Brāhmaṇas, and the other partaking hosts, all come here.” Thus, having invoked all, the officiating priest should, as will be stated, speak with prayer: “You all, having received worship on the coming morning, will grant peace to the king and then depart.” ॥ २०-२१ ॥

Duty thereafter—
Having worshiped the invited deities and others, all (astrologer, minister, sacrificer) should pass that night right there. In the latter part of the night, the dreams that are seen—according to them, auspicious and inauspicious results should be known; the method of knowing this is said in the work named Yātrā.

Here, in the Yātrā—

Duty thereafter—
On the next day, in the morning, going to that region of earth, one should gather materials endowed with the said qualities. Here are the verses spoken by the sage (Vṛddha Garga). ॥ २३ ॥

Verses spoken by Vṛddha Garga—
In a region of earth endowed with the aforesaid auspicious marks, having made a maṇḍala, one should conceive the earth along with a group of many kinds of jewels and with many kinds of places. Thereafter the officiating priest should, in due order of precedence, establish Nāgas, Yakṣas, gods, Pitṛs, Gandharvas and Apsarases, sages, and Siddhas. And together with the Nakṣatras beginning with Aśvinī, the planets; together with the Mothers beginning with Brāhmī, the Rudras; Kārttikeya, Viṣṇu, Viśākhā, the Lokapālas, and the wives of the gods (Indrāṇī, Gaurī, Lakṣmī, etc.). Having fashioned them in various kinds of colors along with mind-pleasing fragrances, the learned should worship with fragrant substances, garlands, sandal, cooked rice-foods, various kinds of fruits, roots, meat, various mind-delighting beverages, liquor, milk, fermentations, etc. ॥ २४–२८ ॥

After this, the method of worship of the previously established deities—
Now the method of worshiping the desired deities in this sacrifice is told. As the method of worship of the planets is told in the chapter on the planet-sacrifice in the book named Yātrā, in the same manner here also the planets should be worshiped. With meat, rice, liquor, etc., the Piśācas, Daityas, and Dānavas should be worshiped. With unguents (unctuous substances), collyrium, sesame, meat, and rice, the Pitṛs; with Sāman and Yajur Vedic mantras, fragrant substances, incense, and garlands, the sages; with unmixed colors and the triple sweets (honey, ghee, and sugar), the serpents; with incense, ghee, oblations, garlands, jewels, hymns, and salutations, the gods; with fragrant substances, garlands, and beautiful scents, the Gandharvas and Apsarases; with offerings containing all colors, the others (Yakṣas, etc.) should be worshiped. In the midst of the worship, to all should be given thread dyed red with kuṅkuma, garments, banners, ornaments, and sacred threads.

Here, in the Yātrā—

Duty thereafter—
In the western or southern part of the maṇḍala, having made an altar and established fire upon it, one should assemble the materials. Let him bring long, uncut, and pithless kuśa grasses. Milk-rice, ghee, unbroken rice, curd, honey, mustard, fragrant substances, flowers, incense, gorocanā, collyrium, sesame, sweet fruits produced in their proper season—these are the materials. Along with each of these materials, one should give a ring (vr̥t) and a dish of milk-rice (an earthen vessel). With these one should worship on the western part of the altar, for that is the altar of the Puṣya bath. ॥ ३४–३६ ॥

Duty thereafter—
At its four corners, one should establish four jars of milk, with sturdy white threads wound around their necks, covered with the leaves and fruits of trees. Those should be filled with water

mixed with the herbs of the Puṣya bath, with jewels, and with the substances for the Puṣya bath expounded by the sage Garga.

Here, Garga—

Substances for the Puṣya bath—
Jyautiṣmatī (kanganī, mālakākaṇī), Trāyamāṇā (the fruit of cirāyate), Abhayā (harra = harīr), Aparājitā (Viṣṇukrāntā), Jīvā (Jīvantī = ḍoṛī), Viśveśarī (dry ginger), Pāṭhā (pāṛh = pāṛhari), Samaṅgā (rakta-mañjiṣṭhā = pasaran), Vijayā (bhaṅg), Sahā (mudraparṇī = vanamūṛ), Sahadevī (sahadeī), Pūrṇakośā (Nāgara mothā), Śatāvarī, Ariṣṭikā (rīṭhā), Śivā (Śamī), Bhadrā (Balā)—these herbs should be put into the four previously established jars. Brāhmī, Kṣemā (wood-guggul), Ajā (a particular herb), all kinds of seeds, Kājanī (haldi = haradī, "niśāhva kāñcanī pītā haridrā varavarṇanītyamaraḥ"), other auspicious substances (curd, unbroken rice, flowers, etc.)—of these substances, as many as are obtainable should be taken. All herbs, all juices, jewels, all fragrant substances, bilva, Vikaṅgata (kaṇṭāpa = kandhī), excellent herbs (Jayā, Jayantī, Jīvantī, Jīvaputrikā, Punarnavā, Viṣṇukrāntā, Cakrāṅgā, Vārāhī, and Lakṣaṇā), metals such as gold, auspicious herbs (gorocanā, mustard, dūrvā, hastimada, etc.)—all substances should be put into the previously established jars. ॥ ३९–४२ ॥

Duty thereafter—
First, having taken the hide of a bull that died of old age and is endowed with excellent marks (the marks stated in this very 61st chapter), facing east, one should spread it out. Thereafter he should spread a flawless hide of a ruddy warrior-bull; then, third, a lion's hide; and thereafter, fourth, a tiger's hide. At the time when the Moon is in Puṣya Nakṣatra, at a favorable hora, he should spread these four hides upon the altar. ॥ ४३–४५ ॥

Duty thereafter—
Upon the hides he should spread a beautiful seat made of gold, silver, copper, or the milk-sap tree. The height of this auspicious seat should be of three kinds (one cubit, a cubit and a quarter = thirty aṅgulas, and one and a half cubits). The first promotes the good of a regional king, the second benefits a king desirous of victory, and the third brings auspiciousness to a king wishing to become a universal monarch. ॥ ४६–४७॥

Duty thereafter—
In the middle of that auspicious seat, the king, having given gold to the minister, trusted kinsmen, officiating priest, astrologer, and townspeople bearing auspicious names (Jayarāja, Siṁharāja, Bandhurāja, Vyāghrarāja, etc.), should sit with a pleased mind. ॥ ४८ ॥

What kind of king should it be—
A king whose inauspiciousness has been destroyed by the auspicious sounds of "puṇyāha" proclaimed by panegyrists, townspeople, and Brāhmaṇas, by the sound of the Vedas, and by the auspicious sounds of mṛdaṅga, conch, and trumpet—such a king should sit upon that seat. ॥ ५९ ॥

Duty thereafter—
The officiating priest should cover that king—who has donned new silk garments and has performed the bali and worship—with a blanket and perform an anointing with a jar filled with ghee. ॥ ५० ॥

The measure of the jars—
There is a measure of eight, twenty-eight, one hundred eight, or eight hundred jars. The greater the measure of jars, the greater the merits they bestow. For this anointing with ghee, the mantra set forth by the sage (Vṛddha Garga) follows. ॥ ५१ ॥

Mantra set forth by Vṛddha Garga—
"Ghee is brilliance; ghee destroys exceedingly great sin. Ghee is the food of the gods. In ghee the worlds (Bhūḥ, etc.) are established. Whatever sins have come upon you, arising from terrestrial (origin of moving and non-moving beings), atmospheric (meteors), thunderbolts, wind, pariveṣa, Gandharva-city, rainbow, etc., and from divine (eclipses, Nakṣatras)—let all these attain destruction by the touch of ghee." ॥ ५२–५३ ॥

Duty thereafter—
Thereafter the officiating priest should remove the blanket from the king's body and, together with fruits and flowers, should perform the anointing with the Puṣya-bath water using the mantra stated ahead. ॥ ५४ ॥

Mantras of anointing—
"May all the deities perform your anointing—the Siddhas, the ancient gods (Brahmā, Viṣṇu, Śiva), the Sādhyas, the hosts of Vāyu, the Ādityas, the Vasus, the Rudras, the two Aśvinī Kumāras, best among physicians; Aditi, mother of the gods; Svāhā; Siddhi; Sarasvatī; Kīrti; Lakṣmī; Ghṛti; Śrī; Sinīvālī (the visible Moon); Kuhū (the invisible Moon, Amāvasyā); Danu; Surasā; Vinatā; Kadrū; wives of the gods; mother of the gods; the divine Apsarases—may all these perform your anointing. The Nakṣatras beginning with Aśvinī, the muhūrtas, the fortnights, the junctions of day and night, the year, the seven planets beginning with the Sun, kalās, kāṣṭhās, kṣaṇas, lavas—all these auspicious members of Time—may they perform your anointing. These all, and others too—ascetics devoted to Veda and vow, along with disciples and women—may they perform your anointing. The gods who travel in aerial cars, Manu, the oceans, rivers, chief Nāgas, Kinnaras, Vaikhānasas, excellent Brāhmaṇas, those moving through the path of the sky, the Seven Sages along with their wives, all fixed places (Dhruva), Marīci, Atri, Pulaha, Pulastya, Kratu, Aṅgirā, Bhṛgu, Sanatkumāra, Sanaka, Sanandana, Sanātana, Dakṣa, Jaigiṣavya, Bhagandara, Ekata, Dvita, Trita, Jābāli, Kaśyapa, Durvāsas, Durvinīta, Kaṇva, Kātyāyana, Mārkaṇḍeya, Dīrghatapas, Śunaḥśepha, Vidūratha, Ūrva, Saṁvarttaka, Cyavana, Atri, Parāśara, Dvaipāyana (Vyāsa), Yavakrīta, the lord of the gods (Indra) with his brothers, mountains, trees, creepers, holy houses, Prajāpati, Diti, the cows, the mothers of the world, the divine vehicles, all worlds of moving and non-moving beings, fire, Pitṛs, stars, clouds, sky, directions, waters—these all, and others too who possess holy fame and destroy all calamities—may they anoint you just as, with holiness and a pleased mind, they anointed Indra." ॥ ५५–७० ॥

Mantras in addition to these—
In addition to these mantras, let the anointing be done with the mantras stated in the Atharva Kalpa, with the Rudra-groups (the eleven anuvākas, the Rudras), the Kauṣmāṇḍas (the six anuvākas, the Marut-groups), the ṛc called Mahārohiṇī and Kubera Hṛdaya. ॥ ७१ ॥

Duty thereafter—
Having bathed, the king should put on garments consecrated with the three ṛcs beginning with "Āpohisṭhā," and the four ṛcs beginning with "Hiraṇyavarṇa." ॥ ७२ ॥

Duty thereafter—
Thereafter, purified, the king should worship the deities, the preceptor, and the Brāhmaṇas, and worship the parasol, banner, and sword; afterward, he should worship the desired deity. ॥ ७३ ॥

Duty thereafter—
The king should wear new, victory-giving ornaments consecrated with the ṛcs beginning with "Āyuṣyaṁ, Varcasyam, Rāyaspoṣa," etc. ॥ ७४ ॥

Duty thereafter—
Then, going to the second altar, the king should sit upon the hides, placing the hides one upon another as stated before: first that of the bull, then of the cat, thereafter of the black antelope, thereafter of the deer, thereafter of the lion, and finally of the tiger. ॥ ७५–७६ ॥

Duty thereafter—
At the principal place (the southern place), the officiating priest should offer oblations into the fire with wood, sesame, ghee, etc., reciting ṛcs pertaining to Rudra, Indra, Bṛhaspati, Viṣṇu, and Vāyu. ॥ ७७ ॥

Duty thereafter—
The astrologer should declare the characteristics of the fire as stated in Indradhvaja; after all is completed, the officiating priest, with joined hands, should speak.

Characteristic of the fire—
Duty thereafter—
"O hosts of gods! Having received worship from the king, grant him great success and then depart so as to come again." ॥ ७९ ॥

What the king should do thereafter—
Thereafter the king should worship the astrologer and the officiating priest with many kinds of wealth; and he should also duly honor the Śrotriyas and others deserving of gifts.

Here, Garga—
Duty thereafter—

Having granted fearlessness to the subjects and releasing animals (goat, etc.) that have reached the place of slaughter, let him free all men held in places of confinement, except those who have committed offenses within the inner precincts (against the king's person or the inner apartments). ॥ ८१ ॥

Greatness of the Puṣya bath—
This bath performed at every Puṣya Nakṣatra brings increase of happiness, fame, and wealth. If, leaving Puṣya Nakṣatra, one performs this bath according to rule in other Nakṣatras, it yields the result of obstruction. But the bath on the full-moon day of Puṣya Nakṣatra is the most excellent. ॥ ८२ ॥

When else the Puṣya bath should be performed—
Upon any kind of calamity or affliction in the kingdom, and upon the sighting of Ketu, the Puṣya bath should be performed. ॥ ८३ ॥

Further greatness of the Puṣya bath—
There is no such calamity in this world that is not destroyed by this bath, and there is no auspicious act that yields a result greater than this.

Here, Garga—
Further greatness of the Puṣya bath—
For a king desiring the rank of great overlord of kings and for a son, even at his first anointing this very procedure is commendable. ॥ ८५ ॥

Further greatness of the Puṣya bath—
Bṛhaspati, of very great fame, prescribed this bath for Indra. This bath increases life and subjects and bestows good fortune. ॥ ८६ ॥

Further greatness of the Puṣya bath—
The king who, by the aforesaid method, also causes elephants and horses to be anointed—those elephants and horses, freed from disease, attain the highest success. ॥ ८७ ॥

Chapter – 49
अथ पट्टलक्षणाध्यायः (Paṭṭa Lakṣaṇa Adhyāya – Chapter on the Marks of the Diadem)

Presentation of the injunction—
What the ancient teachers have described in detail as the marks of the diadems (royal crowns), here the same, endowed with the entire meaning, is stated in brief. ॥ १ ॥

Measure of the crown and result—
A crown having eight aṅgulas breadth at the middle is for the king; one of seven aṅgulas breadth is for the queen; one of six aṅgulas breadth is for the crown prince; and one of four aṅgulas breadth is for the commander of the army—these are auspicious. And a crown of two aṅgulas breadth is called the Prasāda Paṭṭa; this crown the king may place upon someone. Thus these five crowns are declared. ॥ २–३ ॥

Further measure of the crown and result—
All the aforesaid crowns should have a length twice their breadth, and the lateral expansion (of the sides) should be half of the breadth. If these are made of pure gold, they cause increase of prosperity. ॥ ४ ॥

Further measure of the crown and result—
A five-crested one is for the king; a three-crested one for the crown prince and the queen; and a one-crested crown is auspicious for the commander of the army. The Prasāda Paṭṭa should be made without a crest. ॥ ५ ॥

Auspicious and inauspicious knowledge from the crown—
If the fashioned leaves (plates) of the crown spread out of their own accord, there is increase and victory for the king, and the subjects obtain happiness and wealth. ॥ ६ ॥

Further auspicious and inauspicious knowledge from the crown—
If, while being made, there is a hole in the middle of the crown, it destroys both life and kingdom. If it splits in the middle, it should be rejected; and if it is split on both sides, it causes obstacles.

Here, Kāśyapa—
What should be done upon seeing inauspicious marks in the crown—
If inauspicious marks appear in the crown, the learned who know the śāstra should enjoin the king to perform a peace-rite. And a crown endowed with auspicious marks is for the increase of both king and kingdom. ॥ ८ ॥

Chapter – 50
अथ खड्गलक्षणाध्यायः (Khaḍga Lakṣaṇa Adhyāya – Chapter on the Marks of the Sword)

First, the measure of the sword and auspicious–inauspicious results from marks—
A sword of fifty aṅgulas measure is excellent; of twenty-five aṅgulas is inferior; and a sword within more than twenty-five up to fifty aṅgulas is middling. Taking the aṅgula measure, a mark situated at an odd joint is inauspicious; thus, if at the first, third, fifth, etc., odd aṅgulas there is a mark endowed with the characteristics stated ahead, it is inauspicious. ॥ १ ॥

Auspicious marks—
Marks (figures) of bilva, vardhamāna, thread, liṅga, earring, lotus, banner, sword, and auspicious objects are commendable. ॥ २ ॥

Inauspicious marks—
A mark in the form of chameleon, crow, vulture, flesh-eating bird, a headless man, and scorpion is not auspicious. And marks of various shapes situated along the ridge (upper part) are not auspicious. ॥ ३ ॥

Characteristics of the sword—
A sword that is cracked, short, broken, cut at the ridge-region, displeasing to eye and mind, and

without sound is inauspicious; and a sword endowed with the opposite marks is auspicious. ॥ ४ ॥

Movements of the sword and their results—
If the sword suddenly makes a sound, death; if it does not come out of the scabbard, defeat; if it comes out of itself from the scabbard, war; and if the sword blazes of its own accord, victory results. ॥ ५ ॥

Some admonitions regarding the sword—
The king should not draw the sword from the scabbard without cause, nor brandish it, nor look at his face in it, nor state its price, nor tell its place of origin, nor measure it with fingers, nor touch it in an uncontrolled manner. ॥ ६ ॥

Further characteristics of the sword—
A sword whose shape is like a cow's tongue, like the petal of a blue lotus, like a bamboo leaf, like the petal of the karavīra flower, with tip like a spear, and with a circular tip is commendable. ॥ ७ ॥

Further characteristics of the sword—
If the sword exceeds the measure, it should not be cut; rather, by grinding it should be made equal to the measure. If it is cut from the base of the sword, the king dies; and if cut from the tip, his mother dies.

Here, Kāśyapa—
Knowledge of marks by looking at the hilt—
Just as, seeing a mole on the face of women, a mole in the secret place is inferred, so, seeing a scar on the hilt of the sword, one should declare a mark (hole) in its middle. ॥ ९ ॥

Method of knowing a mark in the sword from a question—
If a sword-bearer comes and asks, "Is there a mark in this sword or not?" then, at that time, determining the limb which the questioner touches, and knowing the śāstra to be stated, one should declare a mark in the sword lying in the case. ॥ १० ॥

Method of knowing a mark in the sword—
If the questioner touches the head, one should declare a mark at the first aṅgula from the base of the sword; if he touches the forehead, at the second aṅgula; if he touches the middle of the brows, at the third aṅgula; and if he touches the eye, at the fourth aṅgula. ॥ ११ ॥

Method of knowing a mark—
If he touches the nose, at the fifth aṅgula; if he touches the lip, at the sixth aṅgula; if he touches the cheek, at the seventh aṅgula; if he touches the chin, at the eighth aṅgula; if he touches the ear, at the ninth aṅgula; if he touches the neck, at the tenth aṅgula; if he touches the shoulder, at the eleventh aṅgula; if he touches the chest, at the twelfth aṅgula; and if he touches the flanks, at the thirteenth aṅgula, one should declare a mark. ॥ १२ ॥

Method of knowing a mark in the sword—
If he touches the breast, at the fourteenth aṅgula; if he touches the heart, at the fifteenth aṅgula; if he touches the belly, at the sixteenth aṅgula; if he touches the side, at the seventeenth aṅgula; if he touches the navel, at the eighteenth aṅgula; if he touches the root of the navel, at the nineteenth aṅgula; if he touches the waist-region, at the twentieth aṅgula; and if he touches the secret place, at the twenty-first aṅgula, one should declare a mark. ॥ १३ ॥

Method of knowing a mark in the sword—
If he touches the thigh, at the twenty-second aṅgula; if he touches the middle of both thighs, at the twenty-third aṅgula; if he touches the knee, at the twenty-fourth aṅgula; and if he touches the calf, at the twenty-fifth aṅgula, one should declare a mark. ॥ १४ ॥

Method of knowing a mark in the sword—
If he touches the middle of the calves, at the twenty-sixth aṅgula; if he touches the ankle (gulpha—the joint of the foot), at the twenty-seventh aṅgula; if he touches the heel, at the twenty-eighth aṅgula; if he touches the foot, at the twenty-ninth aṅgula; and if he touches the toe, at the thirtieth aṅgula, one should declare a mark. These are said according to the view of Garga Ācārya.

Here, Garga—
Results of the aforesaid marks—
If there is a mark at the first and so on aṅgulas, one should state, in order, results such as death of a son, etc.; thus, if there is a mark at the first aṅgula—death of a son; at the second—gain of wealth; at the third—loss of wealth; at the fourth—property; and at the fifth—imprisonment. ॥ १६ ॥

Results of marks at the sixth and other aṅgulas—
If there is a mark at the sixth and other aṅgulas, one should, in order, state results such as gain of a son, etc.; thus, if there is a mark at the sixth aṅgula—gain of a son; at the seventh—quarrel; at the eighth—gain of an elephant; at the ninth—death of a son; at the tenth—gain of wealth; at the eleventh—destruction; at the twelfth—acquisition of a woman; and if there is a mark at the thirteenth aṅgula—sorrow arises in the mind. ॥ १७ ॥

Results of marks at the fourteenth and other aṅgulas—
If there is a mark at the fourteenth aṅgula—gain; at the fifteenth—loss; at the sixteenth—gain of a woman; at the seventeenth—killing; at the eighteenth—increase; at the nineteenth—death; and if there is a mark at the twentieth aṅgula—gladness. And if there is a mark at the twenty-first aṅgula—loss of wealth occurs. ॥ १८ ॥

Results of marks at the twenty-second and other aṅgulas—
If there is a mark at the twenty-second aṅgula—gain of wealth; at the twenty-third—death; at the twenty-fourth—gain of wealth; at the twenty-fifth—death; at the twenty-sixth—property; at the twenty-seventh—poverty; at the twenty-eighth—lordliness; at the twenty-ninth—death; and if there is a mark at the thirtieth aṅgula—gain of a kingdom occurs. ॥ १९ ॥

Consideration of the results of marks after thirty aṅgulas—
After thirty aṅgulas there is no special result; however, generally, if a mark is on an odd aṅgula, one should state an inauspicious result, and on an even one, an auspicious result. Some (teachers such as Parāśara) state that after thirty aṅgulas up to the tip there is no result.

Here, Garga—
If the sword has fragrance like karavīra, lotus, the rut of an elephant, ghee, kuḍum, kunda, or campā flower, it is auspicious. If it has smell like cow's urine, mud, or fat (the oily part within bone), it yields inauspicious results. If it has smell like turtle, marrow, blood, or alkali, it gives fear and sorrow. If the sword has luster like the vaiḍūrya gem, gold, or lightning, it causes victory, health, and advancement. ॥ 21–22 ॥

Kinds of libation to the weapon—
One desiring excellent Lakṣmī should give his weapon to drink of blood; one desiring virtuous sons—of ghee; one desiring immeasurable wealth—of water; one desiring success in wealth from sin (such as slaughter)—of the milk of mare, she-camel, and she-elephant; and one desiring to cut off an elephant's trunk—of fish bile mixed with the sap of the palm (tāḍī), and of the milk of a doe, mare, or she-goat—let him give the weapon to drink. ॥ 23–24 ॥

Another kind of libation to the weapon—
After anointing the weapon with sesame oil, one should smear upon it the dung of pigeon and mouse mixed with the latex of the arka tree and the ash of a ram's horn; thereafter, having tempered it, even if he strikes stone with it, it does not break. ॥ 25 ॥

Another kind of libation to the weapon—
Mix buttermilk into banana ash and leave iron in it for one day and night; afterward, take it out, temper it, and then, even if he strikes stone or other iron with it, it does not break. ॥ 26 ॥

Chapter – 51
अथ अङ्गविद्याध्यायः (Aṅga Vidyā Adhyāya – Chapter on the Science of Limbs)

Statement of purpose—
Observing the direction of the questioner, his speech, his place, and the object brought by him, seeing the occurrence in his own limbs and in another's situated there, and considering the time by his own intellect, the astrologer should declare auspicious and inauspicious results; for that Time, being the self-form of all moving and non-moving beings, is pervasive and sees all. By gestures and words, that very Time shows the questioner the auspicious and inauspicious result. Here, Parāśara—

Place for asking the question—
Where, like a flower, there is a beautiful smile, filled with many fruits, having pure bark and leaves, free from inauspicious birds, overshadowed by the shade of a tree bearing the

designation “excellent,” and level ground; where it is the place of gods, sages, Brāhmaṇas, the good, or Siddhas; where the place is filled with beautiful flowers and grains; or where, produced by beautiful, tasty, pure water, and endowed with delight, the place is filled with lovely dūrvā grasses—there asking a question is auspicious. ॥ 2 ॥

Inauspicious places for asking—
Where there are trees cut, split, eaten by worms, thorny, burnt, rough, and crooked; and trees with few leaves and bark, along with inauspicious birds (crows, vultures, cranes, etc.)—there asking a question is inauspicious. ॥ 3 ॥

Further inauspicious places for asking—
In cremation ground, empty temple, crossroads, place producing dejection in the mind, uneven (low and high), always barren, impure, filled with broken pots, charcoal, human skull, ash, chaff, and dry grass—asking a question there is inauspicious. ॥ 4 ॥

Further inauspicious places for asking—
Where ascetics, naked persons, barbers, enemies, prison, butchers, caṇḍālas, rogues, and yatis dwell—there one should not ask; and asking in places of sale of weapons and liquor is inauspicious. ॥ 5 ॥

Marks of direction and time in asking the question—
Facing east, north, or the northeast to ask is auspicious; and facing the northwest, west, south, southeast, or southwest to ask is inauspicious. And in the first half of the day it is auspicious; and to ask at night, at both twilights, or in the latter half is inauspicious.

Auspicious and inauspicious marks at the time of questioning—
The omens of auspiciousness and inauspiciousness that are stated in the ordinance of Yātrā—seeing those omens in front, in the hand or garment of the questioner brought by some person, one should declare auspicious and inauspicious results. Thus, seeing mustard, mirror, water, and collyrium—declare auspicious; and seeing cotton, medicine, and black grain—declare inauspicious.

Male, female, and neuter designated limbs—
Thigh, lip, breast, scrotum, foot, tooth, upper arm, hand, cheek, hair, throat, nail, thumb, conch, armpit, shoulder, ear, genital, and joints of limbs—these are male-designated.
Brows, nose, buttocks, triple folds, waist, the fine line in the middle of the hand, finger, tongue, neck, backs of knees, heel, shank, navel, ear-lobe, and back of the neck—these are female-designated limbs.
Face, back, junction of armpits, knee, bone, side, heart, palate, eye, liṅga, chest, posterior of the waist, head, and forehead—these are neuter limbs.

If, touching a male-designated limb, he asks the question—there is quick success; by a female-designated limb—after delay; and touching a neuter-designated limb—there is never success. If the female-designated limb of a male-designated one is rough, wounded, broken, or emaciated, there is never success. ॥ 8–10 ॥

Results of touching different limbs—
If the questioner, touching or moving the big toe of the foot, asks—there is eye disease; touching or moving a finger—there is sorrow to a maiden; and striking the head and asking—there is fear from the king. Here, Parāśara—

Results of touching the chest and other limbs—
If the questioner asks while touching the chest—there is separation (from a beloved). If he asks while taking off a garment from his body—there is calamity. And if, holding a garment, placing one foot upon the other, he asks—there is gain of the beloved. Here, Parāśara—

Results of touching the big toe of the foot and other limbs—
If the questioner writes upon the ground with the big toe—there is concern for a field; and if with both hands he scratches both feet—one should declare concern for a maidservant. Here, Parāśara—

Results of seeing tāl-leaf and the like at the time of questioning—
If at the time of asking the question there is sight of palm leaves, birch bark, or cloth, one should declare concern for cloth. If the questioner asks while seated upon hair, chaff, bone, or ash—there is disease. And, by seeing a net of rope and the bark of a tree at the time of questioning, there is bondage. Here, Parāśara—

Results of seeing pīpal and the like at the time of questioning—
If at the time of questioning there is sight of pīpal, pepper, dry ginger, musta (nāgara mothā), lodh, kūṭa, cloth, one-eyed person, cumin, gandhamāṁsī, fennel, and tagara flower, then, in order, one should declare concern for fault of a woman, fault of a man, the sick, total ruin, loss of wealth, destruction of son, loss of wealth, loss of grain, loss of son, destruction of bipeds, destruction of quadrupeds, and loss of land. Thus, from sight of pīpal—concern for woman's fault; from pepper—man's fault; from dry ginger—concern for sickness, and so on, should be declared. Here, Parāśara—

Results according to banyan and other fruits—
If at the time of questioning, in the questioner's hand there is fruit of banyan, mahua, tindū, jāmuna, pākaḍ, mango, and ber, then, in order, one should declare gain of wealth, gold, bipeds, iron, cloth, silver, and copper. Thus, if he holds banyan fruit—gain of wealth; if mahua—gain of gold; and so on should be declared. ॥ 17 ॥

Results of a vessel filled with grains and the like—
If at the time of questioning a vessel filled with grains or a full pot is seen, there is increase of families. If elephant dung, cow dung, and dog excrement are seen, then, in order, one should say destruction of wealth, destruction of a young woman, and destruction of friends. ॥ 18 ॥

Results of seeing animals and the like at the time of questioning—
If at the time of questioning animals, elephant, buffalo, lotus, silver, and tiger are seen, then, in order, there is gain of woolen cloth, wealth, silk cloth, sandal, silk cloth, and ornaments. ॥ 19 ॥

Knowledge of concerns regarding friend and the like—
If at the time of questioning there is sight of an aged śrāvaka (kāpālika), one should declare concerns relating to friend, cheat, and wealth; and if there is sight of an excellent ascetic, one should declare concerns for a courtesan, a king, and a woman in childbirth. ॥ 20 ॥

Results of seeing a Buddhist and the like—
If at the time of questioning there is sight of a follower of the Buddhist doctrine, a sub-teacher, an arhat, a nirgranthi, an astrologer, a guildsman, and a fisherman, then, in order, one should declare concerns for thief, commander, merchant, maidservant, warrior, shopkeeper, and killing. ॥ 21 ॥

Results of seeing a tāpasa and the like—
If at the time of questioning there is sight of a tāpasa (ascetic), one should declare concern for a traveler; and if there is sight of a wine-seller, one should declare concern for protection of animals. If there is sight of a gleaner of fallen grains, one should declare concern for calamity. ॥ 22 ॥

Knowledge of concern from words at the time of questioning—
If, at the time of questioning, the first words from the questioner's mouth are, "I wish to ask; you say," one should declare concern relating to alliance and family; if the words are, "You look," then relating to gain; and if, "You give the order," then relating to lordliness. ॥ 23 ॥

Further knowledge of concern from words at the time of questioning—
If at the time of questioning the first word from the questioner's mouth is "Tell (me)," one should declare concern relating to victory or path; if "Having seen, tell the matter in my heart," then relating to a kinsman; and if the words are "You quickly look," then one should declare that the questioner, moving among all people, has concern relating to a thief. ॥ 24 ॥

Knowledge of the thief from touching limbs—
If at the time of questioning the questioner touches an inner limb—one of his own people; if he touches an outer limb—an outsider; if he touches the big toe of the foot—a male servant; if he touches a toe—a maidservant; if he touches the calf—a messenger; if he touches the navel—a sister; if he touches the heart—his own wife; if he touches the thumb of the hand—his own son; and if he touches a finger of the hand—his own daughter—should be declared the thief. ॥ 25 ॥

Knowledge of the thief from touching the belly and other parts—
If at the time of questioning the questioner touches the belly—the mother; if he touches the head—the preceptor; if he touches the right arm—the brother; and if he touches the left arm—the brother's wife—should be declared the thief. ॥ 26 ॥

Auspicious and inauspicious knowledge at the time of questioning from touching limbs—
If at the time of questioning the questioner, leaving aside the inner limbs, touches the outer limbs; spits phlegm; voids urine or feces; drops what is in his hand; bends his body; or breaks his limb—then the stolen article is not obtained. And by seeing an empty vessel in someone's hand or by seeing the thief—the stolen article is not obtained. Or, if at the time of the question,

inauspicious words arise such as “taken away, fallen, cut off, forgotten, destroyed, gone far, stolen, died,” the stolen article is not obtained. ॥ 27–28 ॥

Knowledge of the death of sufferers and of the food of the questioner—
If the aforesaid (inner-limb, etc.) positions stated in the anxiety of loss occur together with the sight of chaff, bone, poison, etc., or together with crying or sneezing, the sick die.

If, touching the firm inner limbs, he asks while exhaling, the astrologer should say, “The questioner, having eaten much food, sits pleased.” ॥ 29 ॥

Knowledge of food from touching the forehead and the like—
If the questioner touches the forehead or there is sight of husked grains (yava, etc.), one should say he has eaten rice of the sixty-day variety; if he touches the chest—ṣaṣṭika grain; if he touches the neck—yava (barley)—he has eaten, one should say. ॥ 30 ॥

Knowledge of food from touching the kakṣi and other parts—
If at the time of the question he touches the armpit, breast, belly, and knee, then, in order, say that the questioner has eaten māṣa (black gram), water, sesame, and barley; and if he bites or licks the lip, say that he has eaten something of sweet taste. ॥ 31 ॥

Knowledge of food from touching the lip-edge and the like—
If at the time of the question he strikes the sṛk (lip-edge) with the tongue, say the questioner has eaten sour; if he scratches the face—bitter; if he hiccups—astringent; and if he spits—salt has been eaten. ॥ 32 ॥

Knowledge of food from expelling phlegm and the like—
If at the time of the question he spits phlegm, then a little dry pungent thing; and if he hears or sees a flesh-eating bird, then a thing mixed with meat; and if he touches the brow, cheek, or lip, say that the questioner has eaten the flesh of a bird. ॥ 33 ॥

Knowledge of food from touching the head and the like—
If at the time of the question the questioner touches the head, throat, chin, hair, temple, ear, calf, and bladder (the place between navel and liṅga), then, in order, say that food mixed with the flesh of elephant, buffalo, boar, ram, cow, hare, deer, and buffalo has been eaten. ॥ 34 ॥

Knowledge of food from seeing an ill-omen—
If at the time of the question the questioner sees or hears an ill-omen (aśakuna), say that he has eaten the flesh of monitor lizard or fish. In the same manner, in the question of a pregnant woman one should conceive miscarriage; thus, if in the pregnant woman’s question time an ill-omen is seen or heard, one should say miscarriage. ॥ 35 ॥

What will be born from the womb—
If, at the time of the pregnant woman’s question, the questioner sees a man, woman, or neuter; thinks of them; sees them standing in front; or touches them—then, in order, one should declare

birth of the same: from the sight, etc., of a man—male; from a woman—female; from a neuter—neuter. At that time, the sight of fermentations, food, flowers, and fruits is auspicious. ॥ 36 ॥

Knowledge of concern regarding the womb—
If a woman, touching the pair of brows, the belly, or the fingers with her thumb, asks; or if at the time of the question there is sight of honey, ghee, etc. (agreeable fruits, etc.), gold, jewels, coral, pearl, dhaī, or a son standing before—then one should declare concern regarding the womb. ॥ 37 ॥

Knowledge of pregnancy and miscarriage—
If at the time of the question the woman asks with her hand placed on the belly, one should declare pregnancy. If at that time an ill-omen appears, or the questioner rubs the back and scratches the belly, or asks with hand in hand, one should declare miscarriage. ॥ 38 ॥

Whether there will be conception or not—
In the question, “Will there be conception or not?”—if the woman touches the right nostril gate (Piṅgalā nāḍī), then after one month; if she touches the left gate (Iḍā nāḍī), then in two years; if she touches the right ear, then after two months; if the left ear, then after two years; if the right breast, then after four years; and if the left breast, then in two years—there will be conception, so one should say. ॥ 39 ॥

Knowledge of the number of children from touching limbs—
If, at the time of the question “How many children will I have?”, the woman touches the lock of hair—then three boys and two girls; if she touches the ear—five boys; if the hand—three boys; if the little finger—one boy; if the ring finger—two boys; if the middle finger—three boys; if the forefinger—four boys; if the thumb—five boys; and if she touches the big toe of the foot or both heels—only one girl should be said. ॥ 40 ॥

Knowledge of the number of children from touching the thigh and other limbs—
If, in the aforesaid question time, the woman touches the right thigh—two girls; if she touches the left thigh—two boys; if she touches the middle of the forehead—four girls; and if she touches the end of the forehead—three girls occur. ॥ 21 ॥

In which Nakṣatra the child will be born—
In the question, “In which Nakṣatra will the child be born?”—if the woman touches the head, forehead, brow, ear, cheek, temple, tooth, neck, right shoulder, left shoulder, both hands, chin, throat, chest, right breast, left breast, heart, right armpit, left armpit, belly, waist, the joint of buttock and anus, right thigh, left thigh, knee, shank, and foot—then, in order, one should declare birth in Kṛttikā and the other Nakṣatras; thus, if she touches the head—in Kṛttikā; if the forehead—in Rohiṇī; if the brow—in Mṛgaśiras, and so on, one should declare. ॥ 42–43 ॥

Conclusion—
Having well examined all śāstras, this very clear “marks of touching the limbs” is stated for the

accomplishment of the desired. The exceedingly intelligent and noble astrologer who completely knows this is always honored by king and people. ॥ 44 ॥

Chapter – 52
अथ पिटकलक्षणाध्यायः (Piṭaka Lakṣaṇa Adhyāya – Chapter on the Marks of Pimples)

Marks of pimples for the Brāhmaṇa and other varṇas—
For the four varṇas beginning with Brāhmaṇa, in order, white, red, yellow, and black pimples give the results stated ahead; however, excluding the Brāhmaṇas—that is, only white pimples for Brāhmaṇas; white and red for Kṣatriyas; white, red, and yellow for Vaiśyas; and white, red, yellow, and black pimples for Śūdras are result-giving. ॥ 1 ॥

Particular results of a pimple—
If a beautiful, clean, and clearly lustrous pimple is on the head—accumulation of wealth; on the crown—quick good fortune; on the pair of brows—misfortune; in the middle of the brows—quick union with desired kinsmen and bad conduct; in the eye-socket—sorrow; in both eyes—sight of the desired; at the temple—going forth (renunciation); and at the place of tears—it produces anxiety. ॥ 2 ॥

Further particular results of a pimple—
If there is a pimple on the nose—gain of cloth; on the cheek—gain of a son; on the lip and chin—gain of food; on the forehead and jaw—great gain of wealth; on the throat—gain of ornaments, food, and drinks; and on the ear—gain of ear-ornaments and spiritual knowledge. ॥ 3 ॥

Further particular results of a pimple—
If a pimple is at the head-joint, neck, heart, breast, armpit, and chest—then, in order, there are weapon-injury, assault, gain of a son, sorrow, and acquisition of a beloved object. And if on the shoulder—frequent wandering for alms; if on the flank—destruction of wealth in many ways. ॥ 4 ॥

Further particular results of a pimple—
If there is a pimple on the back—it causes destruction of a group of sorrows; and if on the arm—it causes destruction of a host of enemies. If at the wrist—bondage of the hands; and if near both upper arms—it causes obtaining of ornaments and the like (food, garments). ॥ 5 ॥

Further particular results of a pimple—
If there is a pimple on the hand—gain of wealth; on the fingers—good fortune; on the belly—sorrow; at the navel—gain of fine food and water; below the navel—carrying away of wealth by thieves; at the bladder (between navel and liṅga)—gain of wealth and grain; on the liṅga—acquisition of a woman and beautiful sons; at the anus—gain of wealth; and on the scrotum—it produces good fortune. ॥ 6 ॥

Further particular results of a pimple—
If there is a pimple on the thigh—gain of vehicle and woman; on the knee—injury from enemies; on the shank—destruction by weapon; and at the ankle (gulpha)—it gives trouble on the road and in bondage. ॥ 7 ॥

Further particular results of a pimple—
If there is a pimple on the buttock—loss of wealth; on the heel—going to an inaccessible place; on the foot—wandering; on the toes—bondage; and on the big toe—it brings honor and hospitality from kinsmen. ॥ 8 ॥

Special result here—
Twitch (aṅga-spandana), gaṇḍa (a kind of boil), and pimple—on the right are blows and on the left are auspicious for men. The reverse is for women: twitch, gaṇḍa, and pimple—on the left are blows and on the right are auspicious. ॥ 9 ॥

Mode of indicating results of other marks—
Thus the results of pimples on each limb from the head downward have been told. In the same way, the results of marks and moles should also be conceived. And in the bodies of beings, the results arising from maśaka, marks, and hair-whorls are also as aforesaid. ॥ 10 ॥

Chapter – 53
अथ वास्तुविद्याध्यायः (Vāstu Vidyā Adhyāya – Chapter on the Science of Dwellings)

First presentation of the injunction there—
Now thereafter, from Brahmā, I declare this knowledge of Vāstu, handed down by the lineage of sages, for the pleasure of the skillful astrologers. ॥ 1 ॥

Origin of Vāstu-knowledge—
In ancient times, there arose from his own body some unknown person who covered the earth and the sky. The gods suddenly seized him and, placing him face downward, established him upon the earth. At that time, the gods who had seized whichever limb, made their place in that limb. That god-imbued unknown person Brahmā conceived under the name Vāstu Puruṣa.
Here, Bṛhaspati—

Measure of the houses of kings—
In a royal residence, a breadth of 108 cubits is excellent, and in the four houses the breadth should be reduced by eight cubits each; and the length should be one and a quarter of the breadth. Thus, in the best house—breadth 108 cubits, length 137 cubits; in the second—breadth 100, length 125; in the third—breadth 92, length 115; in the fourth—breadth 84, length 115; and in the fifth house—breadth 76, length 95 should be.
Here, Kāśyapa—

Measure of the house of the commander—
The first house of the commander should be made with breadth of 64 cubits; in the remaining four houses the breadth should be reduced by six cubits each; and the length should be greater by one-sixth than the breadth. Thus: first house breadth 64, length 74 cubits 16 aṅgulas; second house breadth 58, length 67 cubits 16 aṅgulas; third house breadth 52, length 60 cubits 16 aṅgulas; fourth house breadth 46, length 53 cubits 16 aṅgulas; fifth house breadth 40, length 46 cubits 16 aṅgulas should be. ॥ 5 ॥

Measure of the house of the minister—
In the minister's house, the first has breadth 60 cubits. The remaining four houses should be made, reducing four cubits each. Thus: first house breadth 60, length 66.12; second house breadth 56, length 63; third house breadth 52, length 58/12; fourth house breadth 48, length 54; fifth house breadth 44, length 49.12 should be. The queen's residence should be made with half that breadth and length. Thus: first house breadth 30, length 33.6; second house breadth 28, length 31.12; third house breadth 26, length 29.6; fourth house breadth 24, length 27; fifth house breadth 22, length 24.18 should be.

Measure of the houses of the crown prince and attendants—
In the same manner, five houses should be made for the crown prince. In which, the first house's breadth should be 80 cubits, and in the remaining four houses the breadth should be conceived, reducing by 6–6 cubits: thus the second house's breadth 74, the third 68, the fourth 62, and the fifth 56 cubits should be. Adding a third part of the breadth to the breadth for the length, conceive in order: 106/16, 98/16, 90/16, 82/16, and 74/16. Likewise, the crown prince's younger brother and attendants should have half the crown prince's breadth and length. Thus, the younger brother of the crown prince should have breadths 40, 37, 34, 31, 28; lengths 53.8, 49.8, 45/8, 41/8, 37.8. ॥ 7 ॥

Measure of the houses of feudatories and chief royal officers—
Taking the difference in breadth between the aforesaid five houses of the king and the five houses of the minister as equal to the breadth, and the difference in length as equal to the length, one should make the house of the regional king and chief royal officer. And taking the difference between the king's house and the crown prince's house, one should make the house of the chamberlain, courtesan, and connoisseur of arts. ॥ 8 ॥

Measure of the houses of officials and others—
For the officers of the horse-stable, elephant-stable, and cow-stable, and for those who are masters of other works, houses should be made equal to the treasure-house or the pleasure-house. And the houses of the masters in the workshop and of the messengers should be made by taking as breadth and length the difference between the length and breadth of the crown prince's and the minister's houses. ॥ 9 ॥

स्फुटार्थ चक्रम्
Table on Page No. 319 and 320

Measure of the houses of the royal astrologer and others—
For the astrologers, physicians, and officiating priests, in making houses, the first house's breadth should be 40, the second 36, the third 32, the fourth 28, the fifth 24; and the length of each should be that which results by adding to each its own sixth part, namely: 46.16, 42, 36.8, 32/16, 28. ॥ 10 ॥

Height of the house and the length of a single-hall house—
In a house, the height should be equal to the breadth. And in a single-hall house, the length should be twice the breadth.
Here, Kāśyapa—

Breadth and length of the houses of the four varṇas beginning with Brāhmaṇa—
The houses of the four varṇas beginning with Brāhmaṇa should be made with breadth, in order, from 32 cubits, reducing four cubits each, down to 16 cubits. Thus 32, 28, 24, 20, or 16 cubits for the Brāhmaṇas' house; 28, 24, 20, or 16 for the Kṣatriyas' house; 24, 20, or 16 for the Vaiśyas' house; and 20 or 16 for the Śūdras' house—this breadth should be made. A house of lesser breadth than this should be made for the lower castes. The length of a Brāhmaṇa's house should be greater than the breadth by a tenth part; of a Kṣatriya's by an eighth; of a Vaiśya's by a sixth; and of a Śūdra's house the length should be greater than the breadth by a fourth.

Measure of the treasure-house and the house of the royal officer—
One should make the treasure-house (kośa) and the pleasure-house (ratibhavana) equal to the difference between the houses of the king and the commander; and one should make the houses of the royal officers equal to the difference between the commander's house and the houses of the four varṇas. Thus, equal to the difference between the houses of the commander and the Brāhmaṇa is the house of the Brāhmaṇa royal officer; equal to the difference between the commander and the Kṣatriya—of the Kṣatriya royal officer; equal to the difference between the commander and the Vaiśya—of the Vaiśya royal officer; and equal to the difference between the commander and the Śūdra—of the Śūdra royal officer, the house should be made. ॥ 14 ॥

स्फुटार्थ चक्रम्
Table on Page No. 321 and 322

Measure of the houses of Pārśava and others—
For Pārśava (born of a Brāhmaṇa's seed and a Śūdra woman's blood), Ādi (Bhūrjakaṇṭaka = born of a Brāhmaṇa's seed and a courtesan's blood), and Mūrdhāvasikta (born of a Brāhmaṇa's seed and a Kṣatriya woman's blood), the house should be made taking as breadth and length the half-sum of the measures arising from the parents' varṇa. A house whose measure is less or more than the stated measure brings inauspiciousness to all. ॥ 15 ॥

Measure of the houses of animals and renouncers—
For animals, for the āśramī (renouncer), the grain-house, the weapon-house, the fire-house, and the play-house—make without measure (that is, as desired). The authors of Vāstu-śāstra do not desire to make a house higher than one hundred cubits; that is, to build a house higher

than one hundred cubits is inauspicious.
Here, Garga—

Knowledge of all the halls and its corridor through the houses of the commander and the king—
Having added seventy to the sum of the diameters of the commander's and the king's houses, keep it in two places; by giving the fourteenth part at one place the measure of the hall (the interior portion of the house) is obtained, and by giving the fifteenth part at the other place, the measure of the corridor (the stairway outside the wall of the hall) is obtained. ‖ 17 ‖

Measure of the hall and its corridor for the varṇas beginning with Brāhmaṇa—
In houses of breadth 32, 28, 24, 20, and 16 cubits respectively, for the Brāhmaṇa and the others in order, one should make the hall of measures respectively 4 cubits 17 aṅgulas, 4 cubits 3 aṅgulas, 3 cubits 15 aṅgulas, 3 cubits 13 aṅgulas, and 3 cubits 4 aṅgulas; and the corridor of measures respectively 3 cubits 19 aṅgulas, 3 cubits 8 aṅgulas, 2 cubits 20 aṅgulas, 2 cubits 18 aṅgulas, and 2 cubits 3 aṅgulas. ‖ 18–19 ‖

Measure of the platform (vīthikā) and the names of the Vāstu identified thereby—
A platform (artificial ground) should be made outside the building equal to one-third of the hall. The house whose platform is to the east is called "Soṣṇīṣa," to the west—"Sāyāśraya," to the north—"Sāvaṣṭambha," and around all sides—"Susthita." All these aforesaid Vāstus are praised by the learned of the śāstra.
In the Kiraṇākhya Tantra—

Measure of the height of all mansions—
To the sixteenth part of the building's diameter, adding four cubits—such is the height of the first storey; subtracting its twelfth part from that—such is the height of the second; subtracting its twelfth part from that—such is the height of the third, and so on should be made. ‖ 22 ‖

Measure of the wall in houses of baked brick and of wood—
In every house made of baked bricks, the measure of the wall should be equal to the sixteenth part of the diameter. But in a house made of wood there is not such an arrangement; however, in this one should make the wall's measure according to one's convenience.
Here, Garga—

Height and diameter of the main gate—
To the breadth of the king's and commander's houses, adding one-eleventh part of the breadth, to that adding 70—such number of aṅgulas should be the height of the main gate; and its diameter should be equal to half the height of the gate. ‖ 24 ‖

Measure of the gate for the four varṇas beginning with Brāhmaṇa—
In the houses of the varṇas beginning with Brāhmaṇa, by adding to one-fifth of the diameter eighteen aṅgulas, and adding to that its eighth part—such number of aṅgulas should be the breadth of the gate; and the height should be three times the breadth.

Example— For the Brāhmaṇa's house breadth of 32 cubits, one-fifth is 6; adding 18 aṅgulas makes 24; adding to this its eighth part, 3, the gate diameter comes to 27 aṅgulas, and thrice this, 81, becomes its height. ॥ 25 ॥

Measure of the thickness of the branches and of the threshold of udumbara—
The thickness of both side-branches should be of so many aṅgulas as the height in cubits. Multiplying that thickness by one and a half, such number of aṅgulas should be the thickness of the udumbara (threshold = "udumbarastu dehelyām" iti Medinī).

Measure of the breadth of the branches and threshold, and of the base and top of a pillar—
Multiplying the height of the king's gate by 7 and dividing by 80, the result should be the breadth of the branches and the udumbara.

And multiplying the height of the pillar by 9 and dividing by 80, the result should be the thickness of the base of the pillar; and the thickness of the top should be less by its tenth part.

Names of pillars—
If the middle part of the pillar is four-cornered, it is Rucaka; if eight-cornered, Vajra; if sixteen-cornered, Dvivañja; if thirty-two-cornered, Pralīnaka; and if circular, it is called a Vṛtta pillar. These five pillars are auspicious, and the rest produce inauspicious results.

Structure above and below the pillar—
Divide the pillar into nine parts; among them, the first lower part is called Bahana (because by that part the earth is borne), the second part is Ghaṭa (because of the shape of a pot), the third part is Padma (because of the lotus-shape), and the fourth part is called Uttarostha (where for ornament a special form is made).

In the Kiraṇākhya Tantra—

Measure of Bhāratulā, Tulā, and Upatulā—

The portion of thickness equal to the pillar (in the royal house, the thickness of the pillar is 28 aṅgulas) is called *Bhāratulā*. The portion above that, one-sixth part, is called *Tulā*; and the portion above that, one-seventh part, is called *Upatulā*. In houses other than the royal residence, the measure of Bhāratulā should be kept less by a fourth part. For example, in the royal house the measure of Bhāratulā is 21 aṅgulas; therefore, in other houses than the royal, the measure should be 21 − ¼ of 21 = 15¾ aṅgulas for Bhāratulā and the like. ॥ 30 ॥

Characteristics of the Sarvatobhadra Vāstu—

The Vāstu (building) that has corridors (*ālindas*) on all sides is called *Sarvatobhadra Vāstu*. This Vāstu should be constructed for kings and deities, distinguished by having four gates in the four directions.

Here, Garga—
Image on Page No. 327

Characteristics of the Nandyāvarta Vāstu—
The Vāstu in which the corridors begin from the inner wall of the hall (*śālā*) and proceed in a circumambulatory manner (clockwise) is called *Nandyāvarta Vāstu*. In this type, except the west direction, there are gates in the remaining three directions.
Here, Garga—
Image on Page No. 328

Characteristics of the Vardhamāna Vāstu—
When the main door corridor (*dvārālinda*) is joined to the principal building on the south–north side, and the second corridor proceeds from it in circumambulatory order, and the third corridor is situated again in circumambulatory order from that, such a Vāstu is called *Vardhamāna Vāstu*. In this form, there is no gate in the south direction.
Here, Garga—
Image on Page No. 329

Characteristics of the Svastika Vāstu—
In the *Svastika Vāstu*, the western corridor should be constructed adjoining the hall on the south–north side. From the western corridor two other corridors should extend and be joined to the eastern hall, and between those two should be made the eastern corridor. In this *Svastika Vāstu*, a gate made only in the east direction is auspicious; in other directions, it is not.
Here, Garga—
Image on Page No. 330

Characteristics of the Rucaka Vāstu—
In the *Rucaka Vāstu*, the east and west corridors are joined to the south–north hall, and the remaining two are situated between them. In this *Rucaka Vāstu*, the north door is inauspicious, and the other doors (east, west, and south) are auspicious.
Here, Garga—
Image on Page No. 331

Results of the five four-halled Vāstus such as Sarvatobhadra—
Among the five four-halled types of Vāstu, *Nandyāvarta* and *Vardhamāna* are the best for all. *Svastika* and *Rucaka* are of medium quality. The remaining *Sarvatobhadra* Vāstu is auspicious for kings and divine beings (such as royal ministers, royal dependents, and deities) but not for others. ॥ 36 ॥

Characteristics and results of the three-halled Vāstus such as Hiraṇya—
That building which has no wall on the north side but has walls on the other three directions is called *Hiraṇya* three-halled Vāstu; this type is excellent.
That which has no wall on the east but has walls on the other three sides is called *Sukṣetra*; this type increases wealth, sons, and prosperity.
That which has no wall on the south but has walls on the other three sides is called *Culli*; this

type causes loss of wealth.
That which has no wall on the west but has walls on the other three sides is called *Pakṣaghna*; this type causes loss of sons and enmity.

In the Kiraṇākhya Tantra—

Names, characteristics, and results of the two-halled Vāstus—

That which has halls on the west and south sides is called *Siddhārtha*; that with halls on the west and north sides is *Yamasūrya*; that with halls on the north and east sides is *Daṇḍa*; that with halls on the east and south sides is *Vāta*; that with halls on the east and west sides is *Gṛhaculli*; and that with halls on the south and north sides is called *Kāca*.
In the *Siddhārtha Vāstu*—there is gain of wealth;
In *Yamasūrya*—the master of the house meets death;
In *Daṇḍa*—death by punishment or execution;
In *Vāta*—constant quarrels;
In *Gṛhaculli*—loss of wealth;
In *Kāca*—enmity with kinsmen occurs. ॥ 39–41 ॥

Formation of a field of eighty-one squares (Ekyāsī-pada kṣetra)—

To form a field of eighty-one squares, one should draw ten lines east–west and ten lines north–south. In this way, by drawing lines, a field of eighty-one compartments is formed. Outside it are thirteen, and inside are thirty-two deities. ॥ 42 ॥

Names of the thirty-two deities located in the outer cells—

In the aforesaid field, beginning from the northeast (Īśāna corner) in order are the deities Śikhī, Parjanya, Jayanta, Indra, Sūrya, Satya, Bhṛśa, and Antarikṣa.
From the southeast (Agni corner) in order—Anila, Pūṣan, Vitatha, Bṛhatkṣat, Yama, Gandharva, Bhṛṅgarāja, and Mṛga.
From the southwest (Nairṛta corner) in order—Pitā, Dauvārika, Sugrīva, Kusumadanta, Varuṇa, Asura, Śoṣa, and Pāpayakṣmā.
From the northwest (Vāyavya corner) in order—Roga, Sarpa, Mukhya, Bhallāṭa, Soma, Bhujaga, Aditi, and Diti. ॥ 43–45 ॥

Names of the thirteen deities within—

Within the aforesaid field these deities are established: in the central nine squares is Brahmā; to the east of Brahmā—Aryamā; proceeding clockwise at one cell's distance—Savita, Vivasvān, Indra, Mitra, Rājayakṣmā, Pṛthvīdhara, and Āpavatsa—these eight deities surround Brahmā's region one by one.
In the northeast corner, below Parjanya, is Āpa; in the southeast corner, below Antarikṣa, is Sāvitra; in the southwest corner, below Dauvārika, is Jaya; and in the northwest corner, below Pāpayakṣmā, is Rudra. ॥ 46–48 ॥

The number of cells belonging to the deities in this aforesaid field—

In this field, in the northeast corner, Āpa, Āpavatsa, Parjanya, Agni, and Diti—these five deities are *ekapadik* (lords of one cell each). Likewise, in each corner, five deities are *ekapadik*:
in the southeast—Savita, Sāvitra, Anila (or Anala), Antarikṣa, and Pūṣan;

in the southwest—Indra, Jaya, Dauvārika, Pitā, and Bhṛgu;
and in the northwest—Rājayakṣmā, Rudra, Pāpayakṣmā, Roga, and Nāga—these are also five *ekapadik* deities.
The remaining deities occupying the central zones are *dvipadik* (lords of two cells), being twenty in number: in the east—Jayanta, Indra, Sūrya, Satya, Nṛśa; in the south—Vitatha, Bṛhatkṣat, Yama, Gandharva, Bhṛṅgarāja; in the west—Sugrīva, Kusumadanta, Varuṇa, Asura, Śoṣa; in the north—Mukhya, Bhallāṭa, Soma, Bhujaga, and Aditi.
The four deities Aryamā, Vivasvān, Mitra, and Pṛthvīdhara, placed around Brahmā, are *tripadik* (lords of three cells each).
Here, Parāśara—

Establishment of the deities according to the limbs of the Vāstu Puruṣa—
This Vāstu Puruṣa lies face downward, with his head toward the northeast. In his head is Agni, in his mouth Āpa, in his breast Aryamā, and in his chest Āpavatsa.
The outer deities beginning with Parjanya dwell in his eyes, ears, chest, and shoulders: in the eyes—Parjanya; in the ears—Jayanta; in the chest—Indra; and in the shoulders—Sūrya.
In the arms are Satya and the five deities Satya, Bhṛśa, Antarikṣa, Anila, and Pūṣa; in the hands—Vitatha and Bṛhatkṣat; in the belly—Vivasvān; in the thighs—Yama; in the knees—Gandharva; in the shanks—Bhṛṅgarāja; and in the hips—Mṛga. These are the deities of the right side.
Similarly, on the left side are: in the left breast—Pṛthvīdhara; in the eye—Diti; in the ear—Aditi; in the chest—Bhujaga; in the shoulder—Soma; in the arm—Bhallāṭa, Mukhya, Ādi, Roga, and Pāpayakṣmā; in the hand—Rudra and Rājayakṣmā; in the side—Śoṣa and Asura; in the thigh—Varuṇa; in the knee—Kusumadanta; in the shank—Sugrīva; and in the hip—Dauvārika.
Likewise, in the liṅga are Śakra and Jayanta; in the heart—Brahmā; and in the feet—Pitā.
In this manner, in the eighty-one squares, the divisions of the limbs of the Vāstu Puruṣa are to be made in relation to cities, villages, and houses. ॥ 51–54 ॥

Field of sixty-four squares and the order of placing the deities therein—
Alternatively, one may construct a field of sixty-four squares (drawing nine lines east–west and nine north–south), and by drawing diagonal lines at each of the four corners, the field is formed. In this field, Brahmā presides over four central cells; around Brahmā, in the four corners, eight deities—Āpa, Āpavatsa, Savitā, Sāvitra, Indra, Jayanta, Rājayakṣmā, and Rudra—and in the four outer corners, eight deities—Śikhī, Antarikṣa, Anila (or Anala), Mṛga, Pitā, Pāpayakṣmā, Roga, and Diti—are *ardhapadik* (lords of half a cell).
On both sides of these are *sārdhapadik* (lords of one and a half cells): Parjanya, Bhṛśa, Pūṣa, Bhṛṅgarāja, Dauvārika, Śoṣa, Nāga, and Aditi.
The remaining twenty deities—Jayanta, Indra, Sūrya, Satya, Vitatha, Bṛhatkṣat, Yama, Gandharva, Sugrīva, Kusumadanta, Varuṇa, Asura, Mukhya, Bhallāṭa, Soma, Bhujaga, Aryamā, Vivasvān, Mitra, and Pṛthvīdhara—are *dvipadik* (lords of two cells).

Note— Here only the *caturasra* (square) field of the Vāstu Puruṣa has been presented. But circular, triangular, and hexagonal shapes of houses, villages, and cities are also observed. Therefore, the method of establishing the Vāstu Puruṣa in circular, triangular, etc., forms is now given from another source.

Method of establishing the Vāstu Puruṣa in a circular field of eighty-one squares—
Meaning—In the circular field of eighty-one cells, five circles should be drawn: in the two outer circles—thirty-two squares each; in the third—twelve squares; in the fourth—four squares; and in the fifth—only one square.
In the central five squares is Brahmā; in the two outer circles, the thirty-two deities beginning with Śikhī, having two squares each; and the four deities Aryamā and others having three squares each.
Thus, in the circular field, the establishment of the Vāstu Puruṣa of eighty-one squares is completed.
Image on Page No. 336

Establishing the Vāstu Man in a triangle of eighty-one squares—
Meaning—In the triangular field of the Vāstu Man having eighty-one squares, five triangles should be drawn. In its first part, leaving aside the two corners, divide the eastern side into eight parts and the other two sides into twelve each. In the three corners establish Diti, Vāyu, and Varuṇa. Then, in the remaining cells of the first part, establish the deities beginning with Śikhī. In the second part also establish the aforesaid deities beginning with Śikhī, and upon the three corners of this part, establish again the deities situated in the first corners, and in the remaining cells establish the other deities situated in the Vāstu compartments. In the third part, making four cells in each of the three directions, establish in clockwise order Aryamā, Savitṛ, Savitā, Vivasvān, Indra, Mitra, Jaya, Hara, Rājayakṣmā, Bhūmidhara, Āpa, and Āpavatsa. In the five cells of the fourth (middle) part, establish Brahmā. Thus, in the triangular field, the establishment of the Vāstu Man of eighty-one squares is completed.
Image on 337 Page No.

Establishing the Vāstu Man in a circle of sixty-four squares—
Meaning—In the circular field of the Vāstu Man having sixty-four squares, draw four concentric circles; divide the first circle into thirty-two, the second into sixteen, the third into twelve, and the fourth into four parts. Thereafter, in the first circle establish the thirty-two deities beginning with Śikhī as lords of one cell each; in the second circle establish the eight deities beginning with Aryamā as lords of two cells each; in the third circle establish the four deities beginning with Āpa as lords of three cells each; and in the fourth circle establish Brahmā as lord of four cells. ॥

Display of the vital (marma) divisions—
At the exact middle of the cells, where the cords (threads drawn from corner to corner) mutually intersect, that intersection is called a *marma* place. The wise should not afflict those *marma* places.

Rule for drawing cord from corner to corner—
Here the teacher has not divided *vaṃśa* and *rajju*. Therefore, incidentally, the division stated in Vāstu-vidyā is written here—

Result of an afflicted *marma* place—
If these *marma* places are afflicted by impure vessels and the like, nails, pillars, stones and the like, and weapons, then in the corresponding limb the householder suffers pain; that is, wherever the afflicted *marma* place falls in the Vāstu Man, in that corresponding limb the householder suffers. ॥ 58 ॥

Method of diagnosing a foreign object (śalya)—
At the time of oblation or at the time of questioning, whichever limb the master of the house scratches—one should declare a foreign object (*śalya*) in that limb-place of the Vāstu Man. Or, at the time of offering to a certain deity, if an inauspicious omen occurs (sneeze, crying, shouting, farting, or hearing an inauspicious sound) or there arises a distortion in the fire (sparks, bad smell with sound), then one should declare a foreign object in the place of that deity. ॥ 59 ॥

Results according to kinds of foreign objects—
If the foreign object is of wood—loss of wealth; if of bone—pain to cattle and fear of disease; if of iron—fear of weapons; if of skull or hair—death; if of coal—fear of thieves; and if of ash—constant fear of fire. And if any foreign object other than gold and silver is situated at a *marma* place of the Vāstu Puruṣa, it is extremely inauspicious. If the chaff of grain is situated at a *marma* place or at any other place, it obstructs the arrival of wealth. And if a serpent's tooth is at a *marma* place, it causes fault; but if it is at a place other than a *marma*, it is auspicious. ॥ 60–62 ॥

Mark of cord-lines and extra-*marma* places—
Tie cords from Roga to Vāyu, from Pitā to Śikhī, from Vitatha to Śoṣa, from Mukhya to Bhṛśa, from Jayanta to Bhṛṅga, and from Aditi to Sugrīva; the nine mutual intersections of these cords are the extra-*marma* places of the Vāstu Puruṣa. And in one cell, the measure of the *marma* place is equal to one-eighth of the cell. ॥ 63–64 ॥

Measure of the *vaṃśa* (diagonal cord) and *śirā* (grid line)—
The six cords previously stated have the designation *vaṃśa*, and the ten east–west and ten north–south lines drawn for Vāstu division have the designation *śirā*. In Vāstu, as many cubits as there are in the breadth of one cell, so many aṅgulas is the breadth of one *vaṃśa*; and the breadth of a *śirā* is one and a half times the breadth. ॥ 65 ॥

Some instruction for householders—
The householder who desires happiness should carefully protect Brahmā situated in the middle of the house. By placing remnants of food and the like (impure objects) upon him, the householder suffers pain. ॥ 66 ॥

Defects in a mutilated Vāstu and happiness in an unmutilated one—
If the Vāstu Puruṣa is deficient in the right arm—loss of wealth and fault caused by a woman; if deficient in the left arm—loss of wealth and grain; if deficient in the head—loss of wealth, health, and all qualities; and if deficient in the feet—woman-fault, death of a son, and servitude occur. If

all the limbs of the Vāstu Puruṣa are complete, the person dwelling in that place gains happiness endowed with honor and wealth. ॥ 17–18 ॥

Division of the Vāstu Man in towns and villages also, according to the previously stated method—
In houses, towns, and villages, in the same manner, all the deities reside. In those towns and villages, the varṇas beginning with Brāhmaṇa should dwell in due order. ॥ 69 ॥

Residence places for the varṇas beginning with Brāhmaṇa—
The varṇas beginning with Brāhmaṇa should make their dwelling houses in order in the directions beginning with north: Brāhmaṇa in the north, Kṣatriya in the east, Vaiśya in the south, and Śūdra in the west.
The house should be made in such a way that, when entering the courtyard, those houses fall to the south side. Thus, the courtyard door of a house facing east should be in the north; of a house facing south—the door should be in the east; of a house facing west—the door should be in the south; and of a house facing north—the door should be in the west. ॥ 70 ॥

For the display of the results of thirty-two doors in the four directions—
In the eighty-one-square field, being divided by ninefold cords, and in the sixty-four-square field, by eightfold cords, the thirty-two doors beginning with Anala are formed; in order, their results are being shown. ॥ 71 ॥

Result of the eastern doors from Śikhī up to Antarikṣa—
There are eight deities in the east from Śikhī up to Antarikṣa. Among them: if the door is over Śikhī—fear of fire; over Parjanya—birth of a daughter; over Jayanta—much wealth; over Indra—the king's favor; over Sūrya—irascibility; over Satya—speaking falsehood; over Bhṛśa—cruelty; and over Antarikṣa—thievery arises. ॥ 72 ॥

Result of the southern doors—
There are eight deities in the south from Anila up to Mṛga. Among them: if the door is over Anila—few sons; over Pauṣṇa—servitude; over Vitatha—baseness; over Bṛhatkṣat—increase of food, drink, and sons; over Yāmya—inauspiciousness; over Gandharva—ingratitude; over Bhṛṅgarāja—poverty; and over Mṛga—loss of the son's strength. ॥ 73 ॥

Result of the western doors—
There are eight deities in the west from Pitā up to Pāpayakṣmā. Among them: if the door is over Pitā—affliction of sons; over Dauvārika—increase of enemies; over Sugrīva—gain of sons and wealth; over Kusumadanta—acquisition of sons and wealth; over Vāruṇa—wealth and prosperity; over Asura—fear from the king; over Śoṣa—loss of wealth; and if the door is over Pāpayakṣmā—disease occurs. ॥ 74 ॥

Result of the northern doors—
There are eight deities in the north from Roga up to Diti. Among them: if the door is over Roga—death and bondage; over Sarpa—increase of enemies; over Mukhya—gain of sons and

wealth; over Bhallāṭa—acquisition of all qualities such as valor; over Soma—enmity with the son; over Aditi—fault through a woman; and if the door is over Diti—poverty occurs. ॥ 75 ॥

Result of a door pierced (opposed) by objects—
If a house door is pierced by a road, tree, corner of another house, well, pillar, or drain (water outflow), i.e., if these are directly opposite the door, it is inauspicious. But leaving forward a ground-space twice the height of the house door, even if there is such a piercing by roads and the like beyond, it is not faulty.
In the Samāsa-saṁhitā—

Result of a door pierced by road and the like—
If the house door is pierced by a road—death of the householder; if pierced by a tree—fault among children; if pierced by mud (slush)—sorrow; if pierced by a drain—wasteful expenditure; if pierced by a well—arising of epilepsy; if pierced by a deity's image—destruction of the householder; if pierced by a pillar—fault in women; and if opposite to Brahmā—destruction of the lineage. ॥ 77–78 ॥

Special results regarding the door—
If the leaves (panels) of the house door open without being unbarred—the resident becomes deranged; if it shuts by itself—destruction of the lineage; if the door's measure is greater than the prescribed—fear from the king; and if less than the measure—fear of thieves and sorrow. If the door of another section falls opposite the door of one house—it is not auspicious; a door whose thickness is slight is also not auspicious; a very broad door of the form of a mṛdaṅga gives fear of hunger; and a hunch-backed door destroys the lineage. If the door is pressed down by the weight of the upper wood and the like—it afflicts the householder; if the door leans inward—it causes the householder's death; if it leans outward—it makes the householder a wanderer; and if it is disoriented (looking to a direction different from that of the door)—it afflicts the householder with thieves. ॥ 79–81 ॥

Special note here—
The other doors should not be constructed with as much ornament as that with which the main door's structure was made. And by pots, auspicious fruits, leaves, flowers, and the like, the beauty of that main door should be enhanced. ॥ 82 ॥

Result of dwelling in the corners—
Outside the house, in the four corners beginning with the northeast, in order, Carakī, Vidārikā, Pūtanā, and Rākṣasī dwell. Those who dwell in the corners of cities, buildings, and villages incur faults; but for the low castes—Śvapaca (caṇḍāla, ḍoma, etc.), Antyaja (cobbler, etc.)—dwelling there (in the corner) brings advancement.

Eight deities situated at the corners according to another śāstra—

Trees auspicious or inauspicious according to direction—
Pakara, banyan, cluster fig, and pīpal—these four trees, in clockwise order, are inauspicious in the directions beginning with south and auspicious in the directions beginning with north. Thus,

pakara in the south, banyan in the west, cluster fig in the north, and pīpal in the east are inauspicious; and pakara in the north, banyan in the east, cluster fig in the south, and pīpal in the west are auspicious.
Here, Garga—

Result of trees situated near the house—
If a thorny tree is near the house—there is fear of enemies. If a milky-sapped tree is near the house—there is loss of wealth. If a fruit-bearing tree is near the house—the destruction of progeny occurs. Their wood also is not auspicious to be used in the house. If, having cut down the aforesaid thorny and other trees, in their place are planted puṇṇāga, aśoka, ariṣṭa, vakula, jackfruit, śamī, or śāla, then the aforesaid fault does not occur. ॥ 86–80 ॥

Marks of excellent land—
Land endowed with excellent herbs, with sacrificial trees (palāśa, etc.), with creepers, having sweet soil, fragrant, clean, level, and without holes—such land, even to a man who, wishing to remove the fatigue arising from travel on the road, sits there for a short while, gives Lakṣmī; what then of those in whose house's vicinity she always stays! That is, to them she surely gives wealth. ॥ 88 ॥

Result of a house situated near another house—
If near the house there is the house of a minister—loss of wealth; of a rogue—loss of sons; of a deity—affliction in the mind; a crossroads—lack of achievement; and a principal sacred tree—fear from planets. If there is termite-infested or hollow ground near the house—calamity befalls the householder. If there is a pit near the house—disease of thirst; and if land near the house has the form of a tortoise—loss of wealth occurs. ॥ 89–90 ॥

Auspicious land for the varṇas beginning with Brāhmaṇa—
For Brāhmaṇas, land sloping to the north is auspicious; for Kṣatriyas, land sloping to the east; for Vaiśyas, land sloping to the south; and for Śūdras, land sloping to the west is auspicious. A Brāhmaṇa may build a house on land sloping on all sides. For the remaining varṇas, it is good to build a house only on land sloping to their respective directions. ॥ 91 ॥

Auspiciousness or inauspiciousness of land by rule—
With his own hand, in the middle of the house, the builder should dig a pit one cubit long, one cubit broad, and one cubit deep; then fill that pit with the same soil. If the soil is insufficient to fill the pit—inauspicious; if it fills exactly—neutral; and if, after filling, soil remains over—auspicious. ॥ 92 ॥

A different rule for the auspiciousness or inauspiciousness of land—
Dig the pit as previously stated; afterward fill it with water, go as far as one hundred paces and return. If in that time the water in the pit remains as it was—auspicious. And fill a basket of one āḍhaka measure with the dust there; then weigh that dust; if that dust equals sixty-four *palas*, that land is auspicious. ॥ 93 ॥

Auspiciousness or inauspiciousness of land by a lamp placed in an earthen vessel—
Lighting a lamp with four wicks, place it in an unbaked earthen pot. In them, in order from the north, conceive the Brāhmaṇa and the other varṇas. Then place that vessel in the pit. For whichever direction's wick continues to burn longer, for the varṇa of that direction the land is auspicious. ॥ 94 ॥

Auspiciousness or inauspiciousness of land by flowers—
In the evening, taking flowers of colors corresponding to the Brāhmaṇa and the other varṇas (white, red, yellow, and black), cast them into the pit; in the morning of the next day, take out those flowers and observe—whichever color's flower has not withered, for that one the land is auspicious. Or one should dwell where one's own mind is pleased; there is no need to consider further.

Garga—
Concerning auspicious and inauspicious land for Brāhmaṇa and other castes—
For Brāhmaṇa and other castes, in order, white, red, yellow, and black lands are auspicious. Likewise, for Brāhmaṇa and other castes, in order, lands fragrant with ghee, blood, food, and liquor are auspicious. For Brāhmaṇa and other castes, in order, lands associated with kuśa grass, muñja grass, dūrvā grass, and kāsa grass are auspicious. Likewise, for Brāhmaṇa and others, in order, lands with sweet, astringent, sour, and bitter soil are auspicious. ॥

Garga—
First rite in the commencement of house construction—
The householder should have the land, praised by Brāhmaṇas, first ploughed with a plough and then sow seeds therein. After the seeds have ripened, he should cause cows to sit there for one night. Thereafter, at the time indicated by the astrologer, he should go there and, offering various kinds of eatables, curd, unbroken rice, perfumes, flowers, and incense, worship the guardian of the field (Kṣetrapati), the architect (Sthapati), and the Brāhmaṇas. Then, if the householder is a Brāhmaṇa, he should draw the commencement line of the house touching his head; if a Kṣatriya, touching his chest; if a Vaiśya, touching his thighs; and if a Śūdra, touching his feet. ॥ 98–100 ॥

Result of drawing the line with thumb, etc.—
If the commencement line of the house is made with the thumb, middle finger, forefinger, gold, silver, pearl, curd, fruit, flower, or unbroken rice, it is auspicious for the householder. If that line is made with a weapon, the householder dies by weapon; if with iron, bondage; if with ashes, fear of fire; if with grass, fear of thieves; and if with wood, royal affliction occurs. A crooked, foot-drawn, or formless line causes fear from enemies and distress. A line made with leather, charcoal, bone, or tooth is inauspicious for the householder. A line drawn in reverse order brings enmity, while one drawn in circumambulatory (pradakṣiṇa) order brings wealth. During the time of commencement of house construction, speaking harsh words, spitting, and sneezing are inauspicious. ॥ 101–104 ॥

Procedure for ascertaining presence of bones (śalya-jñāna)—

When entering a half-built or a fully built house, the architect should observe the signs as previously mentioned to determine where the householder is standing and which limb he is touching. At that time, if birds in the illuminated (bright) direction make harsh sounds, then beneath the place where the householder stands and corresponding to the limb he touches, one should say there lies a bone of that limb. From sunrise, the Sun remains successively in each direction for one prahara: from sunrise to the first prahara in the east, then to the second prahara in the southeast, then to the third prahara in the south, then until evening in the southwest, then during the first prahara of night in the west, during the second prahara of night in the northwest, during the third prahara of night in the north, and during the fourth prahara of night in the northeast. The direction the Sun has left is called aṅgāriṇī (fiery), the one he occupies is called dīpta (illuminated), the one he is about to enter is called dhūmita (smoky), and the remaining five directions are called śānta (peaceful). For example, from sunrise until the first prahara, the northeast is aṅgāriṇī, the east is dīpta, the southeast is dhūmita, and the remaining five directions are termed śānta.

In another tradition—

Knowledge of bones through the sounds of elephant, etc.—

When omens are being observed, if an elephant, horse, dog, or such creature makes a sound while facing the illuminated direction, then beneath the place where the householder stands there should be said to be a bone corresponding to the limb he touches. ॥ 107 ॥

Knowledge of bones through the sound of a donkey, etc.—

At the time of stretching the measuring cord, if the sound of a donkey is heard, then beneath the householder there should be said to be a bone. Likewise, if a dog or jackal crosses over that cord, one should also declare the presence of a bone there. ॥ 108 ॥

Knowledge of wealth through the sound of birds—

At that time, if birds make sweet sounds facing the peaceful direction, or if they sit upon any limb of the Vāstu Puruṣa, then beneath that limb there should be said to be wealth.

Garga—

Other auspicious and inauspicious indications—

If the cord breaks while being stretched, the death of the householder occurs. If, while fixing the nail, its head turns downward, a great disease afflicts the householder. If at that time both the householder and the architect lose memory, both are said to die. If, while bringing the water-filled pot, it falls, the householder gets a disease of the head; if it falls and overturns, calamity occurs in the householder's family; if it breaks, the architect dies; and if it slips from the hand, the householder dies. ॥ 110–111 ॥

Method of laying the foundation stone (śilā-nyāsa)—

First, performing worship in the northeast corner (Īśāna-koṇa), he should lay the foundation stone there, then lay the remaining stones in circumambulatory order. In the same order, the erection of pillars should be done. The pillar should be adorned with umbrella, garland, cloth, incense, and sandalwood and then set upright. Likewise, the door should be carefully erected.

Garga—
Result of birds, etc., sitting upon the pillar or door—
If, at the time of setting up, a bird sits upon the pillar or door, or if they tremble, fall, or do not stand upright, then the result should be understood similar to that mentioned earlier for the Indra-dhvaja (flag of Indra). ॥ 114 ॥

Special indications in the building site (vāstu-bhūmi viśeṣa)—
If the Vāstu land is high in the east or north, there is destruction of sons and wealth; if it has a bad odor, loss of sons; if uneven, destruction of kindred; and if disoriented (confused in directions), women become barren. One desiring increase of house should make the Vāstu land equally extended in all directions. If it is to be extended, it should be extended toward the north or east, for the faults therein are minor, i.e., enmity with friends and grief in mind, which are tolerable. One who cannot endure these faults should not extend it. ॥ 115–116 ॥

Result of extending the Vāstu land in the eastern, etc., directions—
If the Vāstu land is extended toward the east, there is enmity with friends; toward the south, fear of death; toward the west, loss of wealth; and toward the north, grief in mind. ॥ 117 ॥

Placement of deities' shrines in a four-halled house (catuḥśāla-gṛha)—
In the northeast corner should be the shrine of the deity; in the southeast corner, the kitchen; in the southwest corner, the storeroom of household articles; and in the northwest corner, the store for wealth and grain.

In another scripture—
Result of water situated to the east, etc., of the building site—
If water is situated to the east, etc., of the Vāstu site, there occurs respectively: destruction of sons, fear of fire, fear of enemies, depravity among women, poverty, increase of wealth, and increase of sons. ॥ 119 ॥

Trees fit and unfit to be cut for building a house—
Except for those having birds' nests, broken, situated near temples, located in cremation grounds, those exuding milk, and the trees of vac, baheda, nīm, and aralū, the remaining trees may be cut for building a house. ॥ 120 ॥

Procedure for cutting a tree and result of its falling—
For the tree to be cut, worship and offering should be performed at night for its sake, and in the morning, beginning from the northeast corner, it should be cut in circumambulatory order. If, after being cut, the tree falls toward the north or east, it is auspicious; if toward other directions, inauspicious. ॥ 121 ॥

Auspicious and inauspicious indications from defects in the tree trunk—
If the cut portion of the tree trunk is free from defect, its wood is auspicious for the house. If in that portion appears a yellow circle, there is said to be a monitor lizard (godhā) in the middle of the tree; if a circle red like mañjiṣṭhā root, a frog; if blue-colored, a serpent; if red-colored, a

chameleon; if of mung-bean color, stone; if yellow, a mouse; and if sword-like, a watery place is to be said.

Instructions for the householder—
One desiring Lakṣmī should not sleep upon food, cow, teacher, fire, or deity, nor upon the lines of descent (such as roga, vāyu, pitṛ, hutāśana, etc.). He should not sleep with head toward north or west, nor with feet wet from city or water.

Viśvakarma—
Form of the house at the time of entry—
He should enter the house adorned with many flowers, decorated with festoons, beautified with water-filled pots, endowed with deities worshipped with flowers, fragrance, and offerings, and resounding with Vedic chants performed by Brāhmaṇas.

In the line "dhūpa-gandha-bali-pūjitāmaraṃ"—this refers to general deities. The worship of general deities should be done in separate places. In the middle of the Vāstu, only Śikhī, Parjanya, and Aryamā should be worshipped. In these places, the worship of outer deities should in no case be done.

Chapter – 54 अथ दकार्गलाध्यायः **(Dakārgala Adhyāya – Chapter on Dakārgala)**

First statement of purpose—
Now, after stating Vāstu-vidyā, that Dakārgala which bestows virtue (Dharma) and fame, and by the knowledge of which the underground water is known, is described. Just as there are veins (nāḍīs) in the limbs of men, in the same way there are higher and lower veins (śirās) within the earth. Water of only one taste falls from the sky upon the earth; yet, by the peculiar nature of the earth, it acquires various flavors and tastes in different elemental regions. Thus, like the color and taste of the earth, the taste and color of water are determined. Therefore, having examined the color and taste of the earth, one should test the taste and flavor of the water. (1–2)

Names of the veins situated in the eastern and other directions—
In order, the lords of the eight directions are Indra, Agni, Yama, Rākṣasa, Varuṇa, Vāyu, the Moon, and Śiva. From the names of these eight guardians of the directions arise eight renowned veins—Aindrī, Āgneyī, Yāmyā, and so on. Among these eight veins is a ninth called Mahāśirā. Besides these nine, hundreds of other veins extend, known by their respective names. The vein which rises upward from Pātāla, and those situated in the four cardinal directions beginning with the east, are auspicious, while those in the intermediate directions beginning with the southeast are inauspicious. Therefore, the characteristics of the veins are now described. (3–5)

Mark of a vein from the tree Vedamajanū—
If, in a waterless region, there stands a tree of Vedamajanū, then three hands to its west, at one and a half puruṣa depth, there is water. By raising the arm upright, the length of a man is taken as one puruṣa (equal to 120 aṅgula). In that pit, the western vein flows. During digging, certain

signs appear: at half a puruṣa depth a pale-colored frog, below that yellow soil, below that stone, and beneath the stone, water is found.

Sārasvata—Knowledge of a vein from the Jāmun tree—
If, in a waterless region, there stands a Jāmun tree, then two puruṣa below and three hands to the north from it lies the eastern vein. Here also, during digging, certain signs are observed: at one puruṣa depth, soil having an iron-like odor; below that, some white soil; and below that, a frog appears. (8)

Knowledge of water arising from an ant-hill to the east of the Jambū tree—
If, to the east of a Jāmun tree, there is an ant-hill nearby, then three hands to its south, at two puruṣa depth, sweet water is found. At half a puruṣa below appears a fish; beneath that, a stone of pigeon-like color. In this pit there is blue soil, and for a long time, abundant water remains. (9–10)

Knowledge of water from the Gūlar tree—
If, in a waterless land, there is a Gūlar tree, then three hands to its west, at two and a half puruṣa depth, there is a vein of pure water. During digging, the signs found are: at half a puruṣa depth, a white serpent; below that, a black stone; and below that, a clear water-channel vein. (11)

Knowledge of water from the Arjuna tree—
If there is an ant-hill three hands to the north of an Arjuna tree, then three hands to its west, at three and a half puruṣa depth, water is present. During digging, the signs are: at half a puruṣa, a monitor lizard; at one puruṣa, black-and-white soil; below that, black soil; below that, yellow soil; below that, white sand; and beneath that, abundant water. (12–13)

Knowledge of water from the Sinduvāra tree—
If there is a Nirguṇḍī (Sinduvāra tree) with an ant-hill, then three hands to its south, at two and one-quarter puruṣa depth, there is water that dries slowly. During digging, the following signs appear: at half a puruṣa depth, a red fish; below that, yellow soil; below that, white soil; below that, sand mixed with fine stone particles; and below that, water is found. (14–15)

Knowledge of water from the Ber tree—
If, from a Ber tree, there is an ant-hill to the east, then three hands to its west, at three puruṣa depth, there is water. At half a puruṣa depth, a white lizard is found.

Knowledge of water from the union of Ḍhāk and Ber trees—
If, in a waterless region, a Ber tree is joined with a Palāśa (Ḍhāk) tree, then three hands to its west, at two and three-quarters puruṣa depth, there is water. At one puruṣa depth, a non-poisonous serpent is seen.

Knowledge of water from a Gūlar tree entwined with a creeper—
Where a Gūlar tree is entwined with a creeper (Vela), three hands to its south, at three puruṣa depth, there is water. At half a puruṣa depth, a black frog appears. (18)

Knowledge of water from the Phalgu tree—
If near a Kākodumbarikā tree (Phalgu) there is an ant-hill, then two and a quarter puruṣa below that ant-hill, to the west, a westward-flowing vein arises. During digging, white and yellow soil are found; below that, a white stone; and at half a puruṣa depth, a white mouse appears. (19–20)

Knowledge of water from the Kapila tree—
If, in a waterless land, there is a Kammila (Kapila) tree, then three hands to its east, at two and one-quarter puruṣa depth, a southern vein flows. During digging, first soil of blue-lotus color appears, below that soil of pigeon color, one hand below that a fish with goat-like smell, and beneath that, saline water flows.

Knowledge of the vein named Kumudā—
If, in a waterless region, there is a Śoṇāka (Sarivan) tree, then two hands to the northwest, at three puruṣa depth, there exists a vein named Kumudā. (25)

Knowledge of water from the Bahedā tree—
If, to the south of a Vibhitaka (Bahedā) tree, there is an ant-hill, then two hands to the east from it, at one and a half puruṣa depth, there is a vein.

Further knowledge of a vein from the Bahedā tree—
If, to the west of the Bahedā tree, there is an ant-hill, then from that tree to the north, at four and a half puruṣa depth, there is a vein. During digging, at one puruṣa depth, a white creature called Viśvambharaka is found; beneath that, a saffron-colored stone; and below that, a westward-flowing vein appears. However, this vein ceases after three years, meaning the water dries up. (25–26)

Knowledge of water from the Saptaparṇa tree—
Where, in the northeast of a Ko-vidāraka (Saptaparṇa) tree, there is a white ant-hill mixed with kuśa grass, then between the Saptaparṇa tree and the ant-hill, at five and a half puruṣa depth, abundant water is found. During digging, at one puruṣa below, a serpent of lotus-core color, below that red soil, and below that a stone called Kuruvinda are seen. These are the signs to be described. (27–28)

Knowledge of water from a Saptaparṇa tree with an ant-hill—
If a Saptaparṇa tree is joined with an ant-hill, then one hand to its north, at five puruṣa depth, there is water. The following signs appear: at half a puruṣa below, a green frog; then yellow soil like haratāla; below that, a black stone like a cloud; and beneath that, a northward-flowing vein with sweet water.

Knowledge of water by observing a frog at the root of any tree—
At the root of any tree where a frog is seen, one hand to its north, at four and a half puruṣa depth, there is water. During digging, at one puruṣa below, a mongoose; beneath that, blue, yellow, and white soils in order; below that, a stone resembling a frog; and beneath that, water is found.

Knowledge of water from the Kañjaka tree—
If, to the south of a Karañjaka tree, there is an ant-hill, then two hands to its south, at three puruṣa depth, there is a vein. At half a puruṣa below appears a tortoise; beneath that, an east-flowing vein; beneath that, a north-flowing vein; beneath that, a green stone; and below that, water arises. (32–34)

Knowledge of water from the Mahuā tree—
If, to the north of a Mahuā tree, there is an ant-hill, then five hands to its west, at eight and a half puruṣa depth, there is water. At one puruṣa below, a large serpent appears; beneath that, smoky-colored earth; below that, a stone the color of kulthī; and below that, an eastward-flowing vein always producing foamy water. (35–36)

Knowledge of water from the Tālamakhānā tree—
If, to the south of a Tilaka (Tālamakhānā) tree, there is a smooth ant-hill with kuśa and dūrvā grasses, then five hands to its west, at five puruṣa depth, there is water and an east-flowing vein.

Sārasvata—Knowledge of water from an ant-hill to the west of a Kadamba tree—
If an ant-hill is to the west of a Kadamba tree, then three hands to its south, at just under six puruṣa depth, there is water. A north-flowing vein with abundant water having an iron-like odor arises. At one puruṣa below, a frog of golden color and beneath that, yellow soil appear. (38–39)

Knowledge of a vein from the Tāl or coconut tree—
If a Tāl (palm) or coconut tree is joined with an ant-hill, then six hands to its west, at four puruṣa depth, there is a south-flowing vein. (40)

Knowledge of water from the Kapittha tree—
If, to the south of a Kapittha (Kaith) tree, there is an ant-hill, then seven hands to its north, at five puruṣa depth, there is water. At one puruṣa below, a mottled serpent and black soil appear; beneath that, layered stone; beneath that, white soil; then a west-flowing vein, and below that, a north-flowing vein.

Knowledge of water from the Aśmāntaka tree—
If, to the left of an Aśmāntaka tree, there is a Ber tree or an ant-hill, then six hands to its north, at three and a half puruṣa depth, there is water. At one puruṣa below, a tortoise appears; beneath that, a gray stone; below that, sandy soil; below that, a southern vein; and below that, a northeast (Īśāna) vein arises. (43–44)

Knowledge of water from the Haridrā tree—
If, to the left of a Haridrā (Haladua) tree, there is an ant-hill, then three hands to its east, at five puruṣa less one-third depth, there is water. At one puruṣa below, a blue serpent appears; beneath that, yellow soil; below that, a green stone; below that, black earth; and beneath that, both western and southern veins flow.

Knowledge of water by observing aqueous signs in a dry region—
In a dry land where signs of a watery country are observed, and where Vīraṇa and dūrvā

grasses are soft and tender, there is water at one puruṣa depth. And where herbs such as Bhaṅgaraiyā, Nisoṭ, Indradantī (Jayapāla), Sukarapādī, and Lakṣmaṇā are present, then two hands to the south from there, at three puruṣa depth, water is found. (47–48)

Knowledge of regions containing and lacking water—
Where there are small, spreading trees with clear and long branches, there water lies near; and where trees are hard inside, with discolored and rough leaves, there is absence of water.

Knowledge of water from Tilaka and other trees with an ant-hill—
Where there are Tilaka, Āmrātaka (Ambāḍā), Varuṇaka (Baraṇ), Milāvā, Bela, Tendu (Tendūā), Aṅkola, Piṇḍāra, Śirīṣa, Añjana, Parūṣaka (Phālsā), Aśoka, and Ativalā trees along with a clear ant-hill, then three hands to the north from them, at four and a half puruṣa depth, there is water. (50–51)

Knowledge of wealth from grassless and grass-endowed regions—
If, in a grassless region, a single spot appears covered with grass, or if in a grass-covered region a single spot appears without grass, then at that spot, at four and a half puruṣa below, there is a vein or wealth. (52)

Knowledge of wealth from thorny and non-thorny trees—
Where among thorny trees there is one without thorns, or among non-thorny trees there is one with thorns, there, three hands to the west from that tree, at three puruṣa increased by one-third below, there is water or wealth. (53)

Knowledge of water by striking the ground with the foot—
Where, upon striking with the foot, a deep sound arises, there, at three and a half puruṣa below, there is water and a northern vein. (54)

Knowledge of water from a branch of a tree—
If one branch of a tree bends downward or has turned yellow, then by digging three puruṣa directly beneath that branch, water is obtained. (55)

Knowledge of a vein from fruits and flowers—
If the fruits and flowers of a tree show deformity or decay, then three hands to the east from that tree, at four puruṣa below, there is a vein. Beneath it are found stone and yellow earth. (56)

Knowledge of water from the Kaṭerī tree—
Where a Kaṭerī tree, free from thorns and bearing white flowers, is seen, by digging three and a half puruṣa beneath that tree, water appears. (57)

Knowledge of water from the date-palm tree—
In a waterless land where a date-palm tree with two heads is found, then two hands to the west from that tree, at three puruṣa below, water is to be declared. (58)

Sārasvata — Knowledge of water from the Karṇikāra and Ḍhāk trees—
If there is a Karṇikāra (Kaṭhachampā) with white flowers, or a Ḍhāk (Palāśa) tree, then two hands to the south from that tree, at two puruṣa below, there is water. (59)

Knowledge of water from vapor and smoke—
Where vapor or smoke is seen emerging from the ground, at two puruṣa below, there exists a vein through which abundant water flows. (60)

Knowledge of water from grains—
In the field where crops, after sprouting, perish; or where the crop is exceedingly pure; or where, after growth, it turns yellow—there, at two puruṣa below, a strong-flowing vein of water exists. (61)

Knowledge of a vein in desert land—
Thus is described how a vein exists in desert country: in the ground there are high and low veins resembling the neck of a camel. (62)

Knowledge of a vein from the Pīlu tree—
If, in the northeast of a Pīlu (Pilū) tree, there is an ant-hill, then four and a half hands to the west from that tree, at five puruṣa below, there is a north-flowing vein. During digging, at one puruṣa below appears a frog; below that, yellow and green soil; beneath that, stone; and beneath the stone, water. (63)

Sārasvata — Knowledge of water from the Pīlu tree—
If, to the east of a Pīlu tree, there is an ant-hill, then four and a half hands to the south from that tree, at seven puruṣa below, water is to be declared. At one puruṣa below appears a mottled serpent one hand in length, and beneath that flows a southern vein carrying very saline water. (64)

Knowledge of water from the Karīra tree—
If, to the north of a Karīra (Karīl) tree, there is an ant-hill, then four and a half hands to the south from that tree, at ten puruṣa below, there is sweet water. At one puruṣa below, a yellow frog appears. (65)

Sārasvata — Knowledge of water from the Rohitaka tree—
If, to the west of a Rohitaka (red Karañja) tree, there is an ant-hill, then three hands to the south from that tree, at twelve puruṣa below, there is a west-flowing vein containing saline water. (66)

Knowledge of water from the Arjuna tree—
If, to the east of an Arjuna tree, an ant-hill is seen, then one hand to the west from that tree, at fourteen puruṣa below, a vein appears. At one puruṣa below, a yellow monitor lizard is seen. (67)

Knowledge of water from the Dhattūra tree—
If, to the north of a Dhattūra tree, there is an ant-hill, then two hands to the south from that tree, at fifteen puruṣa below, there is water. In this pit there is saline water; and at half a puruṣa

below, a mongoose, a copper-colored stone, and red soil are found. Here flows a southern vein. (70–71)

Knowledge of water from the conjunction of Ber and red Karañja trees—
Even without an ant-hill, if Ber and red Karañja trees grow together, then three hands to the west from them, at sixteen puruṣa below, there is water. The water here is sweet; first a southern vein, then a northern vein flows. A stone white as flour and white soil are found, and at half a puruṣa below, a scorpion appears. (72–73)

Knowledge of water from the conjunction of Karīra and Ber trees—
If a Karīra tree is joined with a Ber tree, then three hands to the west from them, at eighteen puruṣa below, there is a vein flowing angularly and carrying abundant water. (74)

Knowledge of water from a Ber tree joined with a Pīlu tree—
If a Ber tree is joined with a Pīlu tree, then three hands to the east from them, at twenty puruṣa below, there is saline water that never dries. (75)

Knowledge of water from the conjunction of Arjuna and Karīra, or Arjuna and Bela trees—
Where Arjuna and Karīra, or Arjuna and Bela trees grow together, then two hands to the west from them, at twenty-five puruṣa below, water is found. (76)

Knowledge of water from dūrvā, kuśa, etc., growing on an ant-hill—
If upon an ant-hill there grows dūrvā grass or white kuśa, then by digging a well beneath that ant-hill, at twenty-one puruṣa below, water is obtained. (77)

Knowledge of water from a Kadamba and an ant-hill with dūrvā—
Where there is a Kadamba tree and an ant-hill overgrown with dūrvā, there, two hands to the south from the Kadamba, at twenty-five puruṣa below, water is found. (78)

Knowledge of water from a Rohitaka tree standing among three ant-hills—
If among three ant-hills there stands a red Karañja tree accompanied by three dissimilar kinds of trees, then four hands and sixteen aṅgula to the north from that red Karañja tree, by digging to forty puruṣa depth, stone is reached, and beneath it lies a vein. (79–80)

Knowledge of water from the Śamī tree—
Where there is a Śamī tree with many knots, and to its north an ant-hill, then five hands to the west from that Śamī tree, at fifty puruṣa below, there is water. (81)

Knowledge of water from five ant-hills—
If in one place there are five ant-hills, and the middle one is white, then by digging in that white ant-hill, at fifty-five puruṣa below, a vein is found. (82)

Knowledge of water from a Śamī tree associated with Palāśa—
Where a Śamī tree is joined with a Palāśa (Ḍhāk) tree, then five hands to the west from them,

at sixty puruṣa below, water is found. At half a puruṣa below there appears a serpent, and beneath that, yellow soil mixed with sand. (83)

Sārasvata — Knowledge of water from a Rohitaka tree surrounded by an ant-hill—
Where a white Rohitaka tree is encircled by an ant-hill, there, one hand to the east from that tree, at seventy puruṣa below, water exists. (84)

Knowledge of water from a Śamī tree with white thorns—
Where a Śamī tree bearing white thorns is found, there, one hand to the south from that tree, at seventy-five puruṣa below, there is water. Upon digging, at half a puruṣa below, a serpent is found. (85)

Gradation in knowledge of water—
The signs by which knowledge of water has been stated for the desert (marusthala) should not be used for knowledge of water in a jaṅgala (having inherent water) country. First, in the case of knowledge of water by Jāmun, cane, etc., the puruṣa measure that has been stated should be taken as doubled in the desert country. (86)

Knowledge of water from Jāmun, etc., trees upon an ant-hill—
If upon an ant-hill there are these herbs: Jāmun, Nisoṭ, Maurvī, Śiśumārī, Sārivā, Śivā (Śamī), Śyāmā, Vārāhī, Jyotiṣmatī (Mālakākaṇī), Garuḍavegā, Sukarikā, Māṣaparṇī (Mūḍ), Vyāghrapadā—then, three hands to the north from the ant-hill, at three puruṣa below, there is water.

Gradation within the previously stated combinations for water—
The previously stated measure of three puruṣa is for an anūpa (water-abundant) country. In a country of little water, by these same aforesaid signs, one should declare water at five puruṣa below, and in a desert country at seven puruṣa below. (89)

Knowledge of water from land having a defect—
Where there is land of a single color devoid of grass, trees, ant-hills, and shrubs, and in that land at some one place a defect is seen, then at five puruṣa below that defective place one should declare water.

Sārasvata—
Knowledge of water from the marks of the land—
Where the land is smooth, low, sandy, and resounds when the foot is placed, there one should declare water at four and a half or five puruṣa below. (91)

Knowledge of water from smooth trees—
Where there are smooth (unctuous) trees, there, at four puruṣa below those trees, there is water. And where, among many trees, one tree is seen to have a defect, there, at four puruṣa to the south from that defective tree, there is water. (12)

Knowledge of water by observing land that yields underfoot—
In a country of much water or little water where, upon pressing with the foot, the ground sinks, and where there are many insects without a dwelling place, there, at one and a half puruṣa below, one should declare water. (93)

Knowledge of water by observing hot and cold land—
Where everywhere it is hot and in one place cold, or everywhere cold and in one place hot, there, at three and a half puruṣa below, there is water. In a region of little water or much water where there is a rainbow, a fish, or an ant-hill, in that land, at four hands below, there is water.

Knowledge of water from the sight of ant-hills, etc.—
Where among many ant-hills one ant-hill is the highest, then by digging four puruṣa below that high ant-hill, water is obtained. Or, in the field where grain, having sprouted, dries up, or does not sprout at all, there one should declare water at four puruṣa below.

Sārasvata—
Knowledge of water from the conjunction of Banyan, Pīpal, and Gūlar—
Where the three trees—Banyan (Baḍa), Pīpal, and Gūlar—are together, and where the two trees Banyan and Pīpal are together, there, by digging three hands beneath these trees, water and a northern vein are obtained.

Sārasvata—
Result of a well situated in the southeast corner—
If a well is in the southeast corner of a village or town, in that village or town there is daily manifold fear, there is mostly the occurrence of fire, and people also die by burning. If the well is in the southwest corner, children perish; and if in the northwest corner, there is fear to women. In the remaining five directions, it is auspicious. (97–98)

Special statement of the teacher—
The Udakārgala which the sage Sārasvata has stated—having seen them, I have said this Udakārgala in Āryā metre. Now I state, from the rules propounded by Manu, the Udakārgala. (19)

Knowledge of water through trees—
Where there are trees, shrubs, or creepers endowed with smooth, holeless leaves, there is water at three puruṣa below. Or, these special substances: land-lotus (sthala-kamala), gokharū, uśīra (khasa), kula—these special substances; guṇḍra (sarakandā, śara), kāśa, kuśa, nalikā, nala—these special grasses; date-palm, Jāmun, Arjuna, cane—these special trees; milky-juiced trees, shrubs and creepers, chatrī, hastīkarṇī, nāgakeśara, lotus, Kadamba, Karañja—all these together with Sinduvāra tree; the special tree Bahedā; the special substance Madayantikā—where all these are, there, at three puruṣa below, there is water. And where there is one mountain upon another mountain, there also at three puruṣa below there is water.

Manu—
Knowledge of water in land endowed with Muñja, etc.—

In land endowed with Muñja, Kāśa, and Kuśa; in land whose blue soil is mixed with particles of stone; and in land of black or red soil—there is much and sweet water.

Knowledge of water from the color of the land—
In land mixed with particles of stone having a copper color, the water is astringent; in yellow land, saline; in pale-colored land, brackish; and in blue land, sweet. (104)

Knowledge of water from the marks of vegetables, etc.—
Where there are vegetables (śāka) endowed with perforated leaves, Aśvakarṇa (Saṅkhua), Arjuna, Baṅka, Sarja, Śrīparṇī, Ariṣṭa, Dhava, Śīśama—these trees; and where there are pūca, guśma, katā endowed with perforated rough leaves—there water lies very far off. (105)

Knowledge of water from the color of the land—
Where, in land of the color of the Sun, abhi, ash, camel or donkey, or in red-colored land, there is a Karīra tree with lac-mark, with milk, there, beneath the stone, there is water. (106)

Knowledge of water by observing black and other stones—
Where there is a stone black like vaidūrya gem, mung bean, or cloud; like the ripe fruit of Gūlar; or, when split, black like collyrium (añjana); or yellow—there, close by, there is abundant water. (107)

Knowledge of water by observing a stone the color of pigeon, etc.—
Where there is a stone of the color like pigeon, honey, ghee, or Soma-creeper—there too everlasting water quickly issues. (108)

Knowledge of lack of water from a stone endowed with variegated spots, etc.—
Where there is a stone endowed with copper-colored spots, with variegated spots, of pale color, of color like ash, camel, or donkey, blue like the Aṅguṣṭhikā tree, of color like the Sun or abhi—there, there is no water. (109)

Knowledge of water from stones of colors like moon-rays, etc.—
A stone of the color like moon-rays, crystal, pearl, gold, indra-nīla gem, cinnabar, collyrium, the rays of the Sun at sunrise, and haratāla is auspicious. Now hereafter, the following matters to be stated are related. (110)

Result of the aforesaid auspicious stones—
All the aforesaid auspicious stones are beneficent, ever served by Yakṣas and Nāgas. In the realm where these stones exist, there is never a drought. (111)

Method of splitting a rock—
If, at the time of digging a well, etc., a stone appears and it cannot be easily broken, then upon it burn the wood of Ḍhāk and Tendu and make it red like fire; then sprinkle over it water mixed with a lump of lime—then the rock splits. (112)

By mixing the ash of the wood of the Mokṣaka (Kālī Pāḍharī) tree into water, then adding the ash of the Śara tree, thereafter sprinkling it seven times upon the rock heated by fire, the rock splits. (113)

By mixing together buttermilk, koji, liquor, and kulthī, and leaving them in one vessel for seven nights, thereafter by repeatedly sprinkling upon the rock heated by fire, the rock splits.

By mixing into cow's urine the ashes of nīm leaves, nīm bark, the pith of sesame, apāmārga, the fruit of tendū, and giloy, then sprinkling it six times upon the rock heated by fire, the rock splits. (115)

Method for making a weapon sharp—
First anoint the weapon with sesame oil; then apply a paste of the ash of a ram's horn and the milk of the Arka tree mixed with the droppings of a pigeon and of a mouse; then, having heated it in fire, give the previously stated quenches; afterwards, having tempered it, even when striking upon stone its edge does not break. (116)

Iron placed for one day and night in the ash of the banana tree mixed with buttermilk—having given it the previously stated quenches and sharpened it—does not lose its edge even when striking upon stone, nor does it become blunt when striking upon other iron. (117)

Marks of a reservoir (vāpī)—
In a reservoir extended east–west, water remains for a long time. In a reservoir extended south–north, water does not remain, because by the waves of the wind this reservoir is destroyed. If one wishes to make a reservoir extended south–north, then to protect it from waves the banks should be faced with strong wood or stone, etc., and at the time of making, each layer of earth should be compacted by elephants, horses, etc., so that the earth, being pressed down, becomes especially firm. (118)

Trees to be planted on the bank of a reservoir—
Along with Nichula, Jāmun, cane, and Nīpa (a kind of Kadamba), together with Arjuna, Banyan, mango, Pilkhan, Kadamba, and Bakula, together with Kuravaka, tāla, Aśoka, Mahuā, and Maulasarī—these trees should be planted on the bank of the reservoir. (119)

Mark of the outlet path of the water—
On one side of the reservoir a path for the water to exit should be constructed, bound with stones. That path should be covered with a plank of wood without holes and made firm with earth. (120)

Special substances to be put into a well—
The powders of añjana, motha, khasa, rājakośātaka, āmla, and the fruit of kataka should be put into the well. (121)

Quality produced by adding the aforesaid substances—
Water which is turbid, bitter, saline, tasteless, or foul-smelling becomes, by these aforesaid herbs, clear, sweet, pleasantly fragrant, and endowed with many qualities. (122)

Constellations for commencing a well—
In Hasta, Maghā, Anurādhā, Puṣya, Dhaniṣṭhā, the three Uttarās, Rohiṇī, and Śatabhiṣā—during these nakṣatras, the commencement of a well is auspicious. (123)

Procedure of installation—
Having offered oblation to Varuṇa and having worshipped with fragrance, flowers, incense, etc., one should first set in the place of the vein a peg made of the wood of Baḍa or Vetasa. (124)

Concluding verse—
In the manner in which knowledge of water occurs after the full moon of Jyeṣṭha, I have already stated it before. Here, having seen the opinion of teachers like Baladeva, by the favor of the sages I have stated for knowledge of water this second chapter named Dakārgala. (125)

Chapter – 55 अथ वृक्षायुर्वेदाध्यायः (Vṛkṣa Āyurveda Adhyāya – Chapter on the Ayurveda of Trees)

Statement of purpose first—
If the surroundings of reservoirs such as vāpī, wells, ponds, etc., are without shade, it is not beautiful; therefore, one should plant a garden on the banks of the reservoirs. ॥ 1 ॥

Land for planting a garden—
Soft land is good for all trees. And in the land where a garden is to be planted, first sow sesame; when that sesame flowers, then crush it into that very soil. This is the first act for the land. Kāśyapa—

Trees to be planted first in the garden—
First, near the garden or near the house, one should plant these auspicious trees: nīmb (nīm), Aśoka, Punnāga, Śirīṣa, Priyaṅgu (kakunī = kaunī). Kāśyapa—

Method of planting grafted trees—
Take branches of these trees—kaṭahar (jackfruit), Aśoka, banana, Jāmun, baḍahar, Dāḍima (pomegranate), grape (dākha), Pālīvata, Bijaura (citron), Atimuktaka—smear with cow-dung, and set them upon the root or branch of a cut dissimilar tree. This is the method of grafting. Kāśyapa—

Season for planting trees—
Trees other than grafted (i.e., seedlings) should be planted in Śiśira (Māgha, Phālguna); grafted trees in Hemanta (Mārgaśīrṣa, Pauṣa); and trees with long branches in the rains (Śrāvaṇa, Bhādra). Kāśyapa—

Rule for transplanting trees—
Having pounded together ghee, khasa (uśīra), sesame, honey, viḍaṅga (vāviḍaṅga), milk, and

cow-dung, apply a smear from the root to the tip, and transplant the tree from one place to another.

Kāśyapa—
Procedure for planting a tree—
Having purified oneself and bathed, worship the tree with sandal, etc., and then plant it in the other place; by planting thus, the tree takes (remains with those same leaves), i.e., it does not wither. ॥ 8 ॥

Method of watering trees—
Trees that have been planted should be watered in summer in the evening and morning, in winter on alternate days, and in the rainy season when the ground dries. ॥ 9 ॥

Trees occurring in water-abundant regions—
Jāmun, cane (veṃta), Vānīra (a kind of cane), Kadamba, Gūlar, Arjuna, Bijaura, grape, baḍahar, Dāḍima, Vaṅjula (tenduā = tinis), Naktamāla (karañja), Tilaka, jackfruit, Timira, Ambāḍā—these sixteen trees occur in an anūpa (very watery) country. ॥ 10–11 ॥

Order for planting trees—
Planting another tree twenty hands from a tree is best; at sixteen hands, medium; and at twelve hands, inferior. Kāśyapa—

Trees that do not bear well—
If one tree is near another tree, touching each other, or if the roots of both are joined together, those trees are afflicted and do not bear fruit well. ॥ 13 ॥

Cause of disease in trees—
By excess of cold, wind, and sun, trees become diseased; the leaves of diseased trees turn yellow, the sprouts do not grow, the branches dry, and sap begins to drip. ॥ 14 ॥

Treatment of trees—
These diseased trees should be treated. First, cut away with a weapon the part of the tree which has the aforesaid defect; then, mixing vāvīḍaṅga, ghee, and paṅka (mud), make a smear upon the trees; afterwards, water with milk-mixed water. Kāśyapa—

Treatment for destruction of fruit—
If fruit does not set on the tree, put kulthī, urad, mūṅg, sesame, and barley into milk and boil; after cooling that milk, water the trees with it for the increase of fruit and flowers.

Application for the growth of trees—
Mix: powder of the droppings (meṅgan, bheḍārī) of sheep and goat two āḍhaka, sesame one āḍhaka, sattu one prastha, water one droṇa, cow’s flesh one tulā; keep all these together in a vessel for seven nights; afterwards, for the increase of fruit and flowers, water trees, shrubs, and creepers with it. It is also said—
Kāśyapaḥ—

Method of sowing seed—
Smear the seed of any tree with ghee by a greased hand and put it into milk. Do thus for ten days. Afterwards, having rubbed it many times with cow-dung, dry it, and fumigate with the flesh of pig and deer. Then, together with flesh and the fat of pig, plant that seed in land purified by sowing sesame, and water with milk-mixed water; then assuredly a tree endowed with flowers arises. ॥ 19–20 ॥

Method of planting the tamarind tree—
By watering with gruel made of rice, urad, and sesame together with rotten flesh, and by giving fumigation of turmeric, even the very hard seed of tamarind quickly germinates. ॥ 21 ॥

Method of planting the seed of Kapittha—
For the quick sprouting of the seed of Kapittha (Kaith), put into milk and boil these eight roots: Viṣṇukrāntā, āmla (āmalaka), Dhava, Vasa; cane with leaves, Sūryamukhī, and the roots of Nisoṭ and Atimukṣaka (tenduā = tinis). After cooling that milk, put the seed of Kaith into it; let the seed remain in the milk for as long as it takes to clap the hands a hundred times with both hands; then take it out of the milk and dry it in the sun. Do thus daily for one month; thereafter sow that seed. Dig a pit of circular shape one hand in diameter, two hands deep; fill it with milk-mixed water prepared by the aforesaid method; when it dries, then heat it with fire; afterwards, plaster the pit with ash mixed with honey and ghee. Then, filling the pit with earth together with powder of urad, sesame, and barley, ram it from above with water together with fish and flesh until it becomes hard; thereafter, plant upon it, four aṅgula below the top, the Kaith seed prepared earlier, and water with water of fish and flesh—then quickly arises a creeper endowed with beautiful leaves that covers a pavilion. ॥ 22–26 ॥

Method of planting other trees—
By giving one hundred triturations (bhāvanā) with the pulp or oil of the fruit of Aṅgola tree, or with the pulp or oil of the fruit of Śleṣmātaka (lasorā), whatever seed is sown in soil moistened by hail is produced in that very moment; and its branch bends down by the weight of fruits—this is not astonishing, i.e., it certainly occurs. ॥ 27–28 ॥

Procedure for planting the Śleṣmātaka tree—
A wise man should take seeds of lasorā with the husk removed, give them bhāvanā with the inner juice of the Aṅgkola fruit, and dry them in the shade, thus seven times. Then, having rubbed them with buffalo dung, place them upon a heap of dried buffalo dung; afterwards, sow those seeds in soil moistened by hail—then in one day a plant endowed with fruit is established. ॥ 29–30 ॥

Constellations for planting trees—
The three Uttarās, Rohiṇī, Mṛgaśīrṣa, Revatī, Citrā, Anurādhā, Mūla, Viśākhā, Puṣya, Śravaṇa, Aśvinī, Hasta—these nakṣatras have been declared by sages with divine vision to be excellent for planting trees.

Chapter – 56 अथ प्रसादलक्षणाध्यायः **(Prasāda Lakṣaṇa Adhyāya – Chapter on the Characteristics of Temples)**

Statement of purpose first—
Having constructed reservoirs full of water and planted gardens, one should build a temple of a deity for the increase of fame and virtue (dharma). (1)

Commendatory verse—
By *Iṣṭa* (sacrifices, etc.) and by *Pūrta* (construction of reservoirs, wells, tanks, etc.) the worlds that are attained—one who desires both those worlds should construct a temple of a deity, for in this both kinds of merit are manifest. It is also said—
Kāśyapa—

In what kind of places deities dwell—
Deities go to places near artificial or natural waters and groves. (3)

Abode of the deities—
In that lake where the rays of the Sun are warded off by lotus-like canopies, where in the paths formed by white lotuses moved by the shoulders of swans there is clear water, where swans, kāraṇḍava, cranes, and cakravāka birds make sound, and where living beings rest in the shade of Nichula trees on the banks—such a lake is always the abode and the pleasure resort of the deities. (4–5)

Places of the deities' pleasure—
By the river which flows downward, whose heron-like girdle is its ornament, whose pleasant sound is the sweet cry of the swans, whose blooming trees on the banks are its ear-ornaments, whose mingling of water and land is the circle of its hips, whose elevated sandbanks are its breasts, and whose swans are its smiles—by such rivers do deities dwell. (6–7)

Place of the deities' delight—
Deities dwell in forests, near rivers, mountains, and waterfalls, and in towns adorned with groves.

Kāśyapa—

Land for temples—
The same kinds of land that are declared auspicious for the building of houses for the Brāhmaṇa and other classes are also best for building temples for deities of those respective classes. (9)

Form of the Vāstu Puruṣa and division of doors in temples—
In a temple, one should always construct the Vāstu having sixty-four squares as previously stated. If there are central doors in all directions, it is best. (10)

General rule for temples—

The height of the temple should be twice its breadth, and one-third of the height is its *kaṭi* (waist). The part above the steps, from where the temple begins, is called the *kaṭi*. Half of the breadth forms the *garbha* (sanctum); the walls in all other directions have the same breadth. The breadth of the doorway is one-fourth of the *garbha*; its height is double its breadth. The width of the *śākhā* (side post) and *udumbara* (upper lintel) equals the height of the doorway, and the thickness of the *śākhā* is one-sixteenth of its width. If between the *śākhās* there are three, five, seven, or nine divisions, the doorway is excellent. In the lower quarter of both *śākhās*, two figures of doorkeepers (such as Nandī and Daṇḍa) should be carved. The remaining three quarters should be adorned with auspicious birds such as swans, bulls, svastika symbols, pots, couples of man and woman, leaves, and creepers.

The height of the deity's pedestal (*piṇḍikā*) is obtained by reducing one-eighth from the height of the doorway. The height of the deity's image is equal to the height of the pedestal multiplied by three—two parts for the image and one part for the pedestal. These proportions apply to all temples.

Kāśyapa—

Names of temples—

Meru, Mandara, Kailāsa, Vimānacchanda, Nandana, Samudra, Padma, Garuḍa, Nandivardhana, Kuñjara, Guharāja, Vṛṣa, Haṃsa, Sarvatobhadra, Ghata, Siṃha, Vṛtta, Catuṣkoṇa, Ṣoḍaśāśra, and Aṣṭāśra—these are the twenty names of temples I (Varāhamihira) have declared. Now their characteristics are described in order.

Characteristic of the Meru temple—

The temple called *Meru* has six corners, twelve storeys, many windows, four doors in the four directions, and a breadth of thirty-two hands.

Kāśyapa—

Characteristics of Mandara and Kailāsa temples—

The *Mandara* temple has six corners, a breadth of thirty hands, ten storeys, and is adorned with pinnacles. The *Kailāsa* temple has pinnacles, a breadth of twenty-eight hands, eight storeys, and six corners.

Kāśyapa—

Characteristics of Vimāna and Nandana temples—

The *Vimāna* temple has lattice windows, a breadth of twenty-one hands, eight storeys, and six corners. The *Nandana* temple has six corners, six storeys, a breadth of thirty-two hands, and sixteen domes (*aṇḍa*).

Kāśyapa—

Characteristics of Samudra and Padma temples—

The *Samudra* temple is circular, and the *Padma* temple is shaped like a lotus. Both have one spire and one storey.

Kāśyapa—

Characteristics of Garuḍa and Nandivardhana temples—
The *Garuḍa* temple is in the form of Garuḍa. The *Nandivardhana* temple is also of Garuḍa form, but without wings and tail. Both are twenty-four hands wide, have seven storeys, and are adorned with twenty-four spires.
Kāśyapa—

Characteristics of Kuñjara and Guharāja temples—
The *Kuñjara* temple is shaped like the back of an elephant and measures sixteen hands in breadth all around at the base. The *Guharāja* temple is shaped like a planet and is sixteen hands wide. Both temples are strengthened with three balconies (*candraśālā*).
Kāśyapa—

Characteristics of Vṛṣa, Haṃsa, and Ghata temples—
The *Vṛṣa* temple is circular on all sides, has one storey, one spire, and a breadth of twelve hands. The *Haṃsa* temple is shaped like a swan, has a breadth of twelve hands, one storey, and one spire. The *Ghata* temple is shaped like a water-pot, has a breadth of eight hands, one spire, and one storey.
Kāśyapa—

Characteristic of the Sarvatobhadra temple—
The *Sarvatobhadra* temple has four doors in the four directions, is adorned with many pinnacles, beautified with numerous lovely balconies, is twenty-six hands in breadth, is square, and has five storeys.
Kāśyapa—

Characteristics of the five temples beginning with Siṃha—
The *Siṃha* temple is adorned with lion images, has twelve doors, and a breadth of eight hands. The remaining four temples—Vṛtta, Catuṣkoṇa, Ṣoḍaśāśra, and Aṣṭāśra—have shapes corresponding to their names and are dark within, that is, they remain dim inside.
Kāśyapa—

Measure of a storey according to Maya and Viśvakarma—
The measure of one storey, according to Maya, is one hundred and eight aṅgula; and Viśvakarma has said three and a half hands.
Maya—

Agreement between both opinions—
The intelligent architect says that the views of Maya and Viśvakarma are one. They say that Viśvakarma gave the measure of the storey excluding the *kapotapālika* (cornice), therefore, by adding twenty-four aṅgula, the measure of Viśvakarma's storey becomes equal to that of Maya. It is also said—

Likewise in another Tantra—

Concluding verse—
I have briefly stated these characteristics of temples; yet all that sage Garga has spoken on this

subject is included herein. And what Manu and other teachers (Vasiṣṭha, Maya, and Nagnajit) have elaborately stated, for remembrance of that I have composed this section. (31)

Chapter 57 — Atha Vajra-Lepa Lakṣaṇa Adhyāya

(Chapter on the Characteristics of the Diamond Plaster)

Method of making vajra-lepa —
Take the unripe fruits of tendu, the unripe fruits of kapittha (wood-apple), the flowers of the silk-cotton tree (śemal), the seeds of the śallakī (sālaī) tree, the bark of the dhanvana tree, and vacha. Place all these into one droṇa of water and prepare a decoction. When only one-eighth remains, remove it from the fire.
Then add, after grinding together, śrīvāsaka (sarala gum), bol, guggul, bhilāva, kundaruka (resin of deodar), resin of sarja (tree resin), flaxseed, and the kernel of bel. Thus a compound called *vajra-lepa* ("diamond plaster") is formed. (1–3)

Quality of vajra-lepa —
If the heated vajra-lepa is applied to divine temples, mansions, pavilions, liṅgas, divine idols, walls, or wells, it adheres for ten million years. (4)

Second method of making vajra-lepa —
Into the previously prepared decoction, add—after grinding—lac, kundaruka (deodar resin), guggul, the soot-web from a house, fruit of kaith, kernel of bel, fruit of nāgabalā, fruit of mahuā, manjishṭhā, rosin, bol, and āmla. The result is a second *vajra-lepa*, equal in merit to the first and suited for the same purposes. (5–6)

Third variety (Vajra-tala) —
Add to the prepared decoction the ground horns of cow, buffalo, and goat; hair of donkey; hide of buffalo; cow-dung; fruits of nīm and kaith; and bol. This becomes a third plaster, endowed with the same virtues, called *vajra-tala*. (7)

Fourth variety (Vajra-saṅghāta) —
Melt together eight parts lead, two parts bell-metal, and one part brass; this mixture, described by Maya, forms the *vajra-saṅghāta* plaster. (8)

Chapter 58 — Atha Pratimā Lakṣaṇa Adhyāya

(Chapter on the Characteristics of Idols)

Measure of the smallest unit —
That dust seen in sun-rays passing through a lattice is the *paramāṇu*; this is the first measure among all measures. (1)

Eight paramāṇus make one raj; eight rajs make a hair-tip; eight hair-tips a likṣā; eight likṣās a louse; eight lice a barley-corn (yava); and eight yavas one aṅgula. (2)

Proportion of the idol —
The pedestal (piṇḍikā) equals one-third of one-eighth of the temple-door's height, and the idol equals double the pedestal. (3)

Divide the idol's height into twelve parts, each again into nine; the unit thus formed is one aṅgula. Every idol, measured by its own aṅgula, totals 108 aṅgulas in height. The face should be twelve aṅgulas wide and fourteen long—this is the standard of the Drāviḍa country. (4)

The nose, forehead, chin, neck, and ears are four aṅgulas long each; the jaw and chin two aṅgulas wide. (5)
The forehead eight aṅgulas wide; each temple two aṅgulas wide and four aṅgulas long; each ear two aṅgulas wide. (6)
From the eye's end, on a line parallel to the brow, four-and-a-half aṅgulas away, is the ear's front; the ear-hole should resemble the natural curvature near the eye. (7)

According to sage Vasiṣṭha —
The distance between eye and ear 4 aṅgulas; lower lip 1 aṅgula, upper lip ½ aṅgula. (8)
Moustache width ½ aṅgula; mouth length 4 aṅgulas; narrow mouth 1½ aṅgulas wide; expanded mouth (of fierce idols) 3 aṅgulas. (9)
Each nostril 2 aṅgulas; from the brow's end to nose 4 aṅgulas; nose-height 2 aṅgulas; space between eyes 4 aṅgulas. (10–11)
Distance between eyebrow-ends 10 aṅgulas; eyebrow width ½ aṅgula; middle 2 aṅgulas; length 4 aṅgulas. (12)
Head 32 aṅgulas long, 14 wide—of which only 12 are visible in paintings. (13–14)

According to teacher Nagnajit —
Face (including hairline) 16 aṅgulas wide; neck 10 wide, 21 long. (15)
From throat to heart, heart to navel, and navel to genitals 12 aṅgulas each. (16)
Thighs and shanks 24 aṅgulas each; knees and calves 4 each; feet 12 long, 6 wide; big toe 3 aṅgulas. (17–18)
Toes diminish successively by ⅛. (19–20)

Thigh thickness 14 aṅgulas front, 21 middle; knee 8 wide, 24 thick; waist 18 wide, 44 in circumference; navel breadth 1 aṅgula. (21–23)
Distance between breasts 16 aṅgulas; hollows near armpits 6 each. (24)
Neck-to-shoulders 8; upper arm and forearm 12 each; upper arm 6 wide, forearm 4 wide; palm

6 wide, 7 long. (25–26)
Middle finger 5 aṅgulas; index, ring, and little proportionally shorter. (27–28)

Nature of idols —
Ornaments, dress, and posture of the idol should follow the custom of its region; for an idol endowed with auspicious marks brings prosperity to its maker. (29)

Special height measures —
The idols of Rāma son of Daśaratha and Bali son of Virocana = 120 aṅgulas.
All others: 108 aṅgulas (best), 96 (medium), 84 (inferior). (30)

Forms of the Deities

Viṣṇu Idol —
Make Viṣṇu eight-armed, four-armed, or two-armed; chest adorned with Śrīvatsa mark and Kaustubha gem; complexion dark-blue like flax flower, clothed in yellow; cheerful face, full neck and shoulders.
– Eight-armed: right hands — sword, mace, arrow, and abhaya-mudrā; left hands — bow, shield, discus, and conch.
– Four-armed: right hands — abhaya-mudrā and mace; left — conch and discus.
– Two-armed: right hand — abhaya-mudrā; left — conch. (31–35)

Baladeva Idol —
One hand with plough; eyes rolling from intoxication; one ear with earring; complexion white like conch, moon, or lotus stalk. (36)

Ekānanshā Devī Idol —
Between Baladeva and Kṛṣṇa, install Ekānanshā Devī: left hand on hip, right holding lotus.
Four-armed form — left hands book and lotus; right hands boon-granting mudrā and rosary.
Eight-armed — left hands water-pot, bow, lotus, book; right hands boon, arrow, mirror, rosary. (37–39)

Śāmba and Pradyumna Idols —
Śāmba holds mace; Pradyumna holds bow; both two-armed and graceful; their wives hold buckler and sword. (40)

Brahmā and Kārttikeya Idols —
Brahmā four-faced, holding water-pot, seated on lotus.
Kārttikeya as a boy, bearing spear and peacock-banner. (41)

Indra Idol —
His elephant (Airāvata) white, four-tusked; Indra holding thunderbolt, third eye oblique on forehead. (42)

Śiva Idol —
Crescent on head; bull emblem on banner; vertical third eye; one hand with trident, other with bow Pināka; or left half as Pārvatī. (43)

Buddha Idol —
Hands and feet marked with lotus, serene, short-curled hair, seated in lotus pose, radiant as the father of the world. (44)

Jina Idol —
Arms reaching knees, adorned with Śrīvatsa mark, serene, sky-clad, youthful, beautiful. (45)

Sūrya Idol —
Nose, forehead, thighs, shanks, cheeks, and chest prominent; northern dress; body covered to chest; hands holding lotuses; crown, earrings, necklace, lotus-like lustre, cuirass, slight smile, and gem-bright radiance. (46–48)

Auspicious & Inauspicious Results
Idol one-hand high — auspicious; two-hand high — brings wealth; three-hand high — prosperity and plenty.
Cracked idols — royal fear; mutilated — disease; lean-bellied — hunger; thin-limbed — loss of wealth; broken-headed — death by weapon; leaning left — wife's death; leaning right — loss of life; gazing upward — blindness; gazing down — anxiety. (49–52)

Construction and Installation of Śiva-Liṅga
Measure its circumference as its length; make of stone, wood, or gem; divide into three parts — lowest square, middle octagonal, upper circular.
Set square part in ground, octagonal in pedestal (jala-harī), circular above; around it a pedestal equal in height to the upper circular part. (53–54)

Improper liṅga forms bring ruin: too thin or long — nation's destruction; broken sides — city's ruin; broken top — master's death. (55)

Idols of the Mothers (Mātṛgaṇa)
Make each Mother's idol in likeness to her presiding deity (e.g., Brāhmī like Brahmā, Indrāṇī like Indra). Render feminine beauty with prominent breasts, slender waist, broad hips. Depict Revanta (Sūrya's son) riding a horse with retinue in hunting pose. (56)

Yama, Varuṇa, Kubera Idols —
Yama riding buffalo, holding staff; Varuṇa on swan with noose; Kubera riding man, leaning left, crowned, large-bellied. (57)

Gaṇeśa Idol —
Elephant-faced, large-bellied, holding axe, single-tusked, bearing roots of mūlaka and sunīla-kanda. (58)

Chapter – 59 अथ वनसम्प्रवेशाध्यायः (Vana-Sampraveśa Adhyāya – Chapter on Entering the Forest)

First duty—
On a day suitable for the idol-maker, in a muhūrta purified by the astrologer, having observed the auspicious omens prescribed in the section on setting out, he should enter the forest to bring wood for making the idol. ॥ १ ॥

Trees to be avoided and not avoided—
Trees that have arisen on the path to the cremation ground, at a temple, on an ant-hill, in a grove, and in the hermitages of ascetics; those that have arisen at the confluence places of rivers; those watered by water from pots; hunchbacked; afflicted by the conjunction of other trees; afflicted by creepers; broken by lightning; shattered by wind; broken by elephants; dried; scorched by fire; and those with beehives—such trees are to be abandoned. And trees having unctuous leaves, flowers, and fruits are auspicious. In this manner, having gone near the desired tree, one should worship it with oblation and flowers. ॥ २–४ ॥

Auspicious trees for Brāhmaṇa and other classes—
Devadāru, sandalwood, Śamī, and Mahuā are for Brāhmaṇas; nīm, pīpal, khair, and bel for Kṣatriyas; jīvaka, khair, sindhuka, and syandana for Vaiśyas; tendu, nāgakeśara, sarja, arjuna, and sāla are auspicious for Śūdras.
Here, Kāśyapa—
One should establish the śivaliṅga or idol according to the directions (quarters) of the tree; and the upper part of the tree should become the upper part of the idol, and the lower part of the tree the lower part of the idol. Therefore, before cutting, one should mark all the directions on the tree.

Method of cutting the tree—
With food-items such as kṣīra (milk-rice), laddū, cooked rice, curd, meat, ullopikā (a certain food item), liquor, flowers, and fragrant substances one should worship the tree. At night, having worshipped the deities, ancestors, piśācas, rākṣasas, nāgas, hosts of gods, Gaṇeśa, and others (bhūtas, pretas, siddhas, vidyādharas, and gandharvas), touching the tree he should recite the mantra to be stated. ॥ ८–९ ॥

Verses of the mantra—
“O tree! Bowing to you, conceived for the worship of such-and-such deity, I salute you; accept this worship duly. And all the beings who dwell upon this tree—let them duly accept this worship and devise another dwelling-place elsewhere; today may they all forgive; I bow to them.” ॥ १०–११ ॥

Method of cutting the tree—
In the morning, having sprinkled the tree with water, with an axe smeared with honey and ghee, first cut in the Īśāna corner, and the rest cut in clockwise (pradakṣiṇa) order. ॥ १२ ॥

Auspicious and inauspicious knowledge from the fallen tree—
If the cut tree falls in the east, Īśāna corner, or north direction, it is productive of increase. In the five directions beginning with the southeast there occur, in order, burning by fire, disease, disease, disease, and the destruction of a horse—that is, in the southeast fire-burning, in the south disease, in the southwest disease, in the west disease, and in the northwest the destruction of a horse. ॥ १३ ॥

Special statement of the teacher—
In this chapter named Vana-sampraveśa, the fall of an old tree, splitting, the embryo of a tree, etc., which I have not stated, should be understood as stated in the previously mentioned Indra-banner chapter and in the Vāstu-vidyā chapter. ॥ १४ ॥

Chapter – 60 अथ प्रतिमाप्रतिष्ठापनाध्यायः (Pratimāpratiṣṭhāpana Adhyāya – Chapter on the Installation of Idols)

Arrangement of the adhivāsana pavilion—
One should make the pavilion of adhivāsana (a specific consecratory rite) endowed with four gateways and covered with the leaves of auspicious trees. On the eastern side of the pavilion one should hang flower-garlands and pennons of many colors. And in the southeast red; in the south and southwest black; in the west white; in the northwest pale (somewhat white); in the north multicolored; and in the northeast—garlands and pennons should be hung. ॥ १–३ ॥

Result of idols of wood, etc.—
An idol of wood and of clay gives longevity, prosperity, strength, and victory. An idol of gem is for the benefit of people. An idol of gold gives nourishment. An idol of silver gives fame. An idol of copper increases offspring. An idol or śivaliṅga of stone causes very great gain of land.
Here, Kāśyapa—
An idol afflicted by any kind of nail destroys the chief man and his offspring. And an idol furnished with any kind of cavity produces disease, calamity, and death.

Method of idol-worship—
Having smeared the *sthaṇḍila* made in the middle of the adhivāsana pavilion, having spread sand upon it and kuśa upon the sand, lay the idol upon it; place the head of the idol on the royal seat and the feet upon a pillow. ॥ ७ ॥

With the decoctions of the leaves of pākara, pīpal, śirasa, and baḍa; with the all-herbs named auspicious (Jayā, Jayantī, Jīvantī, Jīvaputrī, Punarnavā, Viṣṇukrāntā, and Lakṣmaṇā); with soils uprooted by elephant and horse, of a mountain, of an ant-hill, of the confluence places of rivers, and of a lotus-laden lake; with water of a pilgrimage mixed with pañcagavya; and with water of gold and gems—having bathed such an idol whose head is to the east, one should worship with

fragrant substances, with various trumpets and instruments, with the proclamation of auspiciousness and with Vedic sounds. ॥ ८–१० ॥

By the chief Brāhmaṇas one should have the mantras of Indra recited in the east and of Agni in the southeast. Afterwards the sacrificer should honor those Brāhmaṇas with fees, etc. ॥ ११ ॥

With the mantras of that deity whose installation is being done, one should have the fire-offering performed by a Brāhmaṇa. In the Indra-banner chapter we have stated the auspicious and inauspicious marks of fire. If, at the time of offering, the fire is smoky, if its flame whirls in a counter-clockwise manner, if it makes sound repeatedly, or if sparks fly forth from it, it is not auspicious. And if the memory of the performer of the offering is lost or there is sliding (he moves from where he first sat), it is not auspicious. ॥ १२–१३ ॥

The installer should establish upon a beautifully spread couch the idol that has been bathed, clothed, adorned with ornaments, and worshipped with flowers and fragrant substances. ॥ १४ ॥

Having performed adhivāsana of the sleeping idol by song, dance, and vigil, at the muhūrta determined by the astrologers he should perform its installation. ॥ १५ ॥

Having worshipped that idol with flowers, garments, sandal, and fragrant substances, with the sounds of conch and trumpet, he should, in clockwise order, lead it from the adhivāsana pavilion into the temple. Afterwards, having offered various kinds of oblations there, having honored respectable persons with garments, fees, etc., and having given a piece of gold, he should establish the idol into the cavity of the pedestal. The installer should especially honor the astrologer, respectable men, and the artisans. He who acts thus becomes a sharer of benefits in this world and attains heaven in the next. ॥ १६–१८ ॥

Those qualified for idol-installation—
The installation of Viṣṇu should be done by a Vaiṣṇava; of the Sun by a Maga-Brāhmaṇa; of Śiva by a Brāhmaṇa who applies ash; of the Mothers by a Brāhmaṇa who knows the sequence of the maṇḍala; of Brahmā by a Brāhmaṇa; of the self-restrained Buddha by one wearing a red cloth; and of the Jina by a sky-clad Kṣapaṇaka. Whoever is the supreme worshipper of any deity should perform the rite of that deity. ॥ १९ ॥

Time of installation—
In the northern course of the Sun (uttarāyaṇa), in the bright fortnight, when the Moon and Jupiter are in ṣaḍvarga, in a fixed lagna, in a fixed navāṃśa; with benefic planets in the fifth, ninth, ascendant, fourth, seventh, and tenth places; with malefics in the third, sixth, tenth, and eleventh; in the asterisms of the three Uttarās, Rohiṇī, Mṛgaśīrṣa, Revatī, Citrā, Anurādhā, Śravaṇa, Puṣya, and Svātī; on days other than Mars' (Tuesday); and at a time that produces auspiciousness for the installer—the establishment of the deity is auspicious. ॥ २०–२१ ॥

Concluding statement of the teacher—
This, in brief and in general, is the procedure of installing an idol that I have stated. The adhivāsana and installation procedure of the idol of the Sun is separately stated in the Saurā-śāstra. ॥ २२ ॥

Chapter – 61 अथ गोलक्षणाध्यायः (Go-Lakṣaṇa Adhyāya – Chapter on the Marks of Cows)

Exordium first—
What the sage Parāśara spoke on the marks of cows to his disciple Bṛhadratha—here I abridge that. Although all cows are of auspicious marks, nevertheless, taking from the scripture composed by the sages, their auspicious and inauspicious marks are stated. ॥ १ ॥

Inauspicious marks of a cow—
A cow with eyes filled with tears, with muddy eyes, with dry eyes, with eyes like those of a mouse; with shaking horns, with flat horns; black, reddish in color, and of the color like that of a donkey—is not giver of auspiciousness. One with ten, seven, or four teeth; with a long face; hornless; with a drooping back; with a short and thick neck; thick in the middle like barley; with split hooves; with a long black tongue; with very small, very large, or very thick fetlocks; lean; with too few limbs or with too many limbs—such a cow is not giver of auspiciousness.
Here, Parāśara—

Inauspicious marks of a bull—
A bull endowed with the aforesaid marks is also not auspicious. And one with thick and long testicles; whose fore pair of feet are pervaded by veins; whose cheeks are pervaded by thick veins; that discharges from three places (from whose eyes tears, from the penis urine, and excrement fall together); with eyes like a cat; of yellow and blackish-red color—such a bull does not give auspiciousness even to a Brāhmaṇa; what to say of other classes. And a bull whose lips, palate, or tongue are black, and that pants, destroys its herd. ॥ ५–६ ॥

A bull with coarse dung, with a coarse glans of the organ, and with coarse horns; with a white belly; and of blackish-red color—if such a bull be born even in one's own house, it should be abandoned; that bull too destroys the herd. ॥ ७ ॥

Other inauspicious marks of a bull—
A bull on whose body there is a mark like a flower of black color; of a color mixed of white and red; and with eyes like a cat—such a bull, when taken, does not benefit even Brāhmaṇas. ॥ ८ ॥

A bull yoked in a cart that lifts its feet as if lifting feet sunk in mire; one with a weak neck; and a bull with a short or depressed back—is not capable of bearing loads.
Here, Parāśara—

Auspicious marks of a bull—
Good are the bulls whose lips are soft, joined, and like copper in color; with small fleshy mass at the waist; whose palate and tongue are of copper color; with small, thin, and high ears; with a beautiful belly; with straight shanks; with joined hooves of copper color; with strong chest; with a large dewlap; with smooth, soft, and thin skin and hair; with horns and body of copper color; with a thin tail touching the ground; with blackness at the ends of the eyes; breathing more; with shoulders like a lion; with a thin and small throat-fleece; and with beautiful gait. ॥ ९–१२ ॥

Auspicious are the bulls whose left side is endowed with left-circling hair-whorls and right side with right-circling hair-whorls, and whose shanks are like those of an antelope. ॥ १३ ॥

Bulls are auspicious and capable of bearing loads whose eyes are like the vaidūrya gem, the mālikā (bel) flower, or a water-bubble; who have large eyes and body; and whose rear parts of the hooves are not split.

Here says Śālihotra—
He whose nose region is full (or fleshy), who enjoys comfort like that of a cat, whose right side is white, whose lustre is like that of a lotus or lac, whose tail is good, whose gait is like that of a horse, whose testicles are long, whose belly is like that of a sheep, whose part between the hind thighs and testicles as well as between the fore-thighs is contracted — such a bull is capable of bearing loads and walking. And the bull whose gait resembles that of a horse yields auspicious results. ॥ 15–16 ॥

A bull of white colour, having copper-coloured horns and eyes, and a large mouth, is called *Haṃsa*-named. This bull gives auspicious results and increases the herd. ॥ 17 ॥

The bull whose tail touches the ground, whose horns are of copper colour, whose eyes are red, whose nose is elevated, and whose colour is *kalmāṣa* (a mixture of red, white, and yellow) — such a bull quickly makes its master wealthy. ॥ 18 ॥

If a bull of any colour has all its four feet white, it is auspicious. If a bull entirely with auspicious marks is not available, then one with mixed marks should be accepted; but in that, the quantity of auspicious marks should be greater.

Chapter – 62

अथ श्वलक्षणाध्यायः **(Śva Lakṣaṇa Adhyāya – Chapter on the Marks of the Dog)**

Marks of a Dog—
The dog which has five nails on three feet and six nails on the right forefoot, whose lips and the front of the nose are of copper colour, whose gait is like that of a lion, which walks smelling the ground, whose tail is covered with much hair, whose eyes are like those of a bear, and whose two ears are long and soft — such a dog brings full prosperity (Lakṣmī) into its master's house.

Here says Garga—

Marks of a Bitch—
The bitch which has five nails on three feet and six nails on the left forefoot, whose eyes are like the *mallikā* (jasmine) flower, which has a curved tail, yellow colour, and long ears — such a bitch protects the kingdom of her master. ॥ 2 ॥

Chapter – 63

अथ कुक्कुटलक्षणाध्यायः **(Kukkuṭa Lakṣaṇa Adhyāya – Chapter on the Marks of the Cock)**

Auspicious and Inauspicious Marks of the Cock—
The cock whose wings and toes are straight, whose mouth, nails, and crest are of copper colour, whose body is white, and which crows with a good sound at the end of the night — such a cock causes increase of the king, the kingdom, and horses.

Here says Garga—
The cock whose neck is like barley, whose colour is like ripe *ber* fruit, whose head is large, and whose body is mixed with many colours like white, yellow, red, and black — such a cock is auspicious in battle. And the cock of colour like honey or like a bee also gives victory in battle. One of other colours, of weak body, of dull voice, and lame — such a cock is inauspicious. ॥ 2 ॥

The hen which utters soft and pleasant sounds, which has a smooth body, and is beautiful — she grants the kings wealth, fame, victory, strength, and prosperity for a long time. ॥ 3 ॥

Chapter – 64

अथ कूर्मलक्षणाध्यायः **(Kūrma Lakṣaṇa Adhyāya – Chapter on the Marks of the Tortoise)**

Auspicious Marks of a Tortoise—
The tortoise whose colour is like crystal or silver, marked with blue lines, having the shape of a pot, possessing a beautiful dorsal bone, red in colour, or dotted like mustard seeds — such a tortoise increases the majesty of the king. ॥ 1 ॥

The tortoise of dark colour like collyrium or a bee, dotted with marks, with all limbs complete, and having a thick neck — such a tortoise promotes the expansion of the kings' realm. ॥ 2 ॥

More Auspicious Marks of the Tortoise—
The tortoise shining like a *vaidūrya* gem, having a thick neck, of triangular shape, with covered holes, or having a beautiful back-line — such a tortoise should be kept by the king Maṅgacha in his pleasure-pond or in a jar filled with water.

Chapter – 65

अथ छागलक्षणाध्यायः **(Chāga Lakṣaṇa Adhyāya – Chapter on the Marks of the Goat)**

Auspicious and Inauspicious Marks of Goats—
The auspicious and inauspicious marks of the he-goat are stated. Goats having nine, ten, or eight teeth are auspicious; therefore, keeping them at home brings good fortune. And goats having seven teeth are inauspicious; hence they should be avoided. ॥ 1 ॥

Auspicious Marks of Goats—
The goat having white spots on the right side, of dark reddish-black colour like an *ṛṣya* (a kind of deer), or being black or red in colour but with white patches on the right side — such a goat is auspicious. ॥ 2 ॥

The hanging fleshy part in the throat of goats like a breast is called *maṇi*. Goats having one *maṇi* are auspicious, and those having two or three *maṇis* are extremely auspicious. ॥ 3 ॥

Hornless goats having completely black or white bodies, half black and half white colour, or half yellow and half black colour — all these goats are auspicious. ॥ 4 ॥

Marks of the Kuttaka Goat—
The goat which walks ahead of its herd, which enters the water first, which has a white-coloured head, or whose head has six dots like the *Kṛttikā* constellation — such a goat is auspicious. Such a goat is called *Kuttaka.*

Here says Garga—

Marks of the Kuṭila Goat—
The goat having spots of different colours on the neck and head, of white-yellow colour like powdered sesame, having red eyes like copper, having white body and black legs or black body and white legs — such goats are auspicious. Such a goat is called *Kuṭila.*

Marks of the Jaṭila Goat—
The goat having black testicles, white colour, a black band in the middle part, which makes sound while eating, or eats slowly — all these goats are auspicious. Such a goat is called *Jaṭila.*

Marks of the Vāmana Goat—
The goat whose hair of the head and legs are like that of a black deer (*ṛṣya*), or whose forepart is of pale colour and hind part of blue colour — that goat is auspicious. Such a goat is called *Vāmana.*

Results of the Above Goats—
The four goats—*Kuttaka*, *Kuṭila*, *Jaṭila*, and *Vāmana*—are sons of Lakṣmī and do not dwell in a land devoid of prosperity. ॥ 9 ॥

Inauspicious Marks of Goats—
The goats which make sound like an ass, which have hot or crooked tails, bad nails, bad colour, torn ears, heads like an elephant, or black palate and tongue — these goats are inauspicious. ॥ 10 ॥

Auspicious Marks of Goats—
The goats having excellent colour, throats adorned with *maṇis*, hornless, and with red eyes — these goats increase happiness, fame, and prosperity of the household in which they live. ॥ 11 ॥

Chapter – 66

अथ अश्वलक्षणाध्यायः **(Aśva Lakṣaṇa Adhyāya – Chapter on the Marks of the Horse)**

First, auspicious marks of the horse—
With long neck and eye-sockets, with broad loins and heart-region, with copper-coloured palate, lips, and tongue, with fine skin, hair of the head and tail, with beautiful hoofs, gait, and comfort, with small ears, lips, and tail-switch, with round shanks, knees, and thighs equal, and with white teeth, as well as with an appearance pleasing to the sight and beauty of the body—such a horse, pure in all limbs, is always for the destruction of the king's enemy.
(Here says Vararuchi—)

Marks of inauspicious hair-whorls—
The horse in whose limbs the whorl of hairs occurs in these parts is inauspicious: below the eyes, jaw, face-cheek, heart, the junction of heart and throat, the lower part of the nose, near the ears (temples), loins, the region between navel and genitals (bladder), knee, testicles, navel, the hump near the shoulder (kakuda, near the scapular region), anus, the right side of the belly, and the feet.

(Here says Vararuchi—)

Marks of auspicious hair-whorls—
The horse in whom the whorl occurs in these parts gives exceedingly auspicious results: the philtrum (under-surface of the upper lip), throat, ears, middle of the back, above the eyes, near the eyebrows, lips, haunch (hind quarter), fore-arm, knee, left side of the abdomen (kukṣi), flank, and forehead.

The ten fixed whorls of horses—
In the bodies of horses there are certainly ten hair-whorls; these are called fixed whorls (*dhruvāvarta*). Namely: one each on the philtrum and in the hair of the head, and in these four places two each—between the flank and navel (the aperture), above the aperture, on the head, and on the chest; thus there are ten fixed whorls. ॥1॥

Method of knowing the stages (age) of horses—
In the lower row of teeth of a horse there are six incisors between the molars. If the six front teeth of both rows are white, it is a one-year-old colt; if dark reddish-black, it is two years old.

Of the two rows, the two middle teeth are called *sadaṃśa* (central incisors), the two adjacent to *sadaṃśa* on each side are called *madhyama* (intermediate), and the two adjacent to *madhyama* are called *antya* (corner).

If the *sadaṃśa* have fallen and been replaced, the horse is three years old; if the *madhyama* have fallen and been replaced, four years old; and if the *antya* have fallen and been replaced, five years old.

If there are black dots on the *sadaṃśa*, the horse is six years old; if on the *madhyama*, it is seven years old; and if on the *antya*, it is eight years old.

If there are yellow dots on the *sadaṃśa*, the horse is nine years old; if on the *madhyama*, ten years old; and if on the *antya*, twelve years old.

If there are white dots on the *sadaṃśa*, the horse is twelve years old; if on the *madhyama*, thirteen years old; and if on the *antya*, fourteen years old.

If there are glass-like white dots on the *sadaṃśa*, the horse is fifteen years old; if on the *madhyama*, sixteen years old; and if on the *antya*, seventeen years old.

If there are honey-coloured dots on the *sadaṃśa*, the horse is eighteen years old; if on the *madhyama*, nineteen years old; and if on the *antya*, twenty years old.

If there are conch-coloured dots on the *sadaṃśa*, the horse is twenty-one years old; if on the *madhyama*, twenty-two years old; and if on the *antya*, twenty-three years old.

If there are holes on the *sadaṃśa*, the horse is twenty-four years old; if holes on the *madhyama*, twenty-five years old; and if a hole on the *antya*, twenty-six years old. If the *sadaṃśa* are loose, twenty-seven years; if the *madhyama* are loose, twenty-eight years; and if the *antya* are loose, twenty-nine years. If the *sadaṃśa* have fallen out, thirty years; if the *madhyama* have fallen out, thirty-one years; and if the *antya* have fallen out, thirty-two years.

Chapter – 67

अथ हस्तिलक्षणाध्यायः **(Hasti Lakṣaṇa Adhyāya – Chapter on the Marks of the Elephant)**

Among elephants there are four classes—Bhadrā, Manda, Mṛga, and Miśra; first, the marks of Bhadrā—
Elephants having teeth the colour of honey, limbs complete in their divisions, very massive, very firm, capable for work, endowed with proportionate limbs, with a bow-shaped dorsal ridge, and with round knees and hips like a boar—these elephants are called Bhadrā. ॥1॥

Marks of the elephant called Manda—
The elephant whose chest and the girdle around the middle of the body are loose, whose belly

is long, whose skin, neck, belly, and root of the tail are thick, and whose glance is like that of a lion—this elephant is called Manda. ॥2॥

Marks of Mṛga and of Saṃkīrṇa—
Those whose lower lip, tail-hair, and penis are small; whose feet, neck, teeth, trunk, and ears are small; and whose eyes are large—these elephants are called Mṛga. Those in whom the marks of the aforesaid three elephants appear in mixed form are called Saṃkīrṇa. ॥3॥

Measure of height, length, and girth of the aforesaid elephants—
In the Mṛga class the height is five cubits, the length from tail to hump is seven cubits, and the middle girth is eight cubits. By adding one cubit respectively to the height, etc., of Mṛga, the measure of Manda is obtained; and by adding two cubits respectively, that of Bhadrā is obtained. In the Saṃkīrṇa class the measure of height, etc., is indeterminate.
(Here says Parāśara—)

Marks of the colour of the must (temporal exudation) of elephants—
In the Bhadrā class the must is green; in the Manda class yellow like turmeric; in the Mṛga class black; and in the Saṃkīrṇa class mixed in colour. ॥5॥

Auspicious marks of elephants—
With copper-coloured lips, palate, and mouth; with eyes like those of birds that dwell in houses; with smooth and elevated fore-parts of the tusks; with broad and long comfort; with a dorsal ridge elevated like a bow, long, compact, and sunk; with one fine hair in each kumbha (temple) like that of a tortoise; with broad ears, jaws, navel, forehead, and penis; with eighteen or twenty nails like those of a tortoise; endowed with three lines; with a round trunk; and with the wind of the trunk moistened with the fragrance of fresh must—such an elephant is auspicious. ॥6–7॥

The tip of an elephant's trunk is called Puṣkara, and the extremity of Puṣkara is called Aṅgulī.
Those elephants whose Aṅgulī is long, whose Puṣkara is red, whose throat-roar is like the thunder of a cloud filled with water, and whose neck is broad, long, and round—such elephants are auspicious for the king. ॥8॥

Inauspicious marks of elephants—
Without must, deficient or excessive in nails and limbs, hunchbacked, with tusks like the horns of a ram, whose testicles are visible, without Puṣkara, dirty, with blue, mottled, or black palate, with small tusks or mouth-hair, without tusks, emasculate, or a pregnant she-elephant endowed with the marks of an elephant— all these elephants the king should send to a foreign land, for they all give evil results.

Chapter – 68

अथ पुरुषलक्षणाध्यायः **(Puruṣa Lakṣaṇa Adhyāya – Chapter on the Marks of Man)**

Collection of matters not to be disobeyed—

By well knowing these—*unmāna* (height measured in aṅgulas), *māna* (heaviness), *gati* (movement), *saṃhati* (density), essence, colour, *sneha* (smoothness), *svara* (sound), nature, *sattvānuka* (returning from a former birth), *kṣetra* (the ten kinds of feet etc. to be stated), and *mṛjā* (the body-shadow composed of the five great elements)—a learned knower of the science of physiognomy can declare the auspicious and inauspicious results for men. ॥1॥

Auspicious and inauspicious marks of the feet—

Feet without sweat, with soft soles, like the interior of a lotus, with united toes, with beautiful copper-coloured nails, endowed with beautiful heels, warm, without visible veins, with hidden ankle-bones, and like the back of a tortoise—these are the feet of kings.

(Here says Garga—)

Feet of winnowing-basket shape, with unsmooth and pale nails, with crooked veins, dry, and with sparse toes—such feet bestow poverty and sorrow. Feet elevated in the middle and pale-coloured are for the road, i.e., they lead one to travel. Feet of *kaṣāya* (dark reddish-black) colour destroy the lineage. He whose feet have lustre like clay baked in fire is a slayer of a Brāhmaṇa. If the soles are yellow, he delights in a woman not to be approached.

(Here says Samudra—)

Marks of the shanks and thighs—

Men whose thighs are beautiful like the trunk of an elephant, with sparse and fine hairs, and whose knees are full and even—these are kings. And men whose shanks are like those of a dog or a jackal are without wealth.

Marks of hair on the shanks—

In the hair-follicles of kings' shanks there is one hair; in those of scholars and *śrotriya* there are two hairs. Those men in whose single follicle there are three, four, etc., hairs are poor and afflicted. It is also said—

With hairy (matted) shanks, dull-witted, they obtain sorrow and poverty;
One-hair is a king; two-hair is of great fame;
Three-hair and many-hair man is devoid of fortune. ॥5॥

Marks of the knee—

A man with fleshless knees dies abroad; one with small knees is fortunate; with very broad knees is poor; with low-set knees is conquered by women; with fleshy knees enjoys a kingdom; and a man with large knees is long-lived.

Marks of the linga—

A man with small linga is wealthy and without sons; with thick linga is poor; with linga bent to the left is without son and wealth; with linga bent to the right is soned; with linga bent downward is poor; with linga pervaded by veins has few sons; with linga having thick knots is happy; and a man with soft etc. linga dies of diseases like *prameha*.

Marks of the testicles—

A man with one testicle dies by drowning. With unequal (one small, one large) testicles is

lustful; with equal testicles is a king; with testicles drawn upward is short-lived; and a man with long testicles lives a hundred years.
(Here says Samudra—)

Marks of the glans and of urine—
Men with red-coloured glans (the forepart of the linga) are wealthy, and with white and impure glans are poor. Those whose urination makes sound are happy; if there is no sound, they are poor. Those in whom two, three, or four streams of urine fall in a rightward-turning order are kings. Those whose urine-stream scatters here and there are poor. A single encircled urine-stream makes one handsome, but gives no son. Men whose glans are smooth, elevated, and even enjoy wealth, women, and jewels. Those whose glans are depressed in the middle are fathers of daughters and poor. Those whose glans are elevated in the middle are lords of many cattle. And those without glans are wealthy.
(Here says Samudra—)

Marks of the bladder-region, semen, and intercourse—
Those whose upper part of the bladder-region (between navel and linga) is fleshless are poor and disliked by all. Those whose semen has fragrance like a flower are kings. Those whose semen has fragrance like honey are very wealthy. Those whose semen has smell like fish have many children. If there is little semen, they are fathers of daughters. Those whose semen has smell like flesh are great enjoyers. If semen smells like wine, he is a sacrificer; if like alkali, he is poor. One who performs intercourse quickly is long-lived, and one who performs intercourse for a long time is short-lived.
(Here says Samudra—)

Marks of the buttocks (sphik)—
A man with very thick buttocks (*kullā = the mass of flesh at the waist/hips*) is poor; one whose *kullā* is fleshy is happy; one with one-and-a-half-sized (*ḍyoḍhe*) *kullā* dies by a tiger; and one whose *kullā* is like a frog is a king. (Here says Samudra—)

Marks of the waist and abdomen—
One whose waist is like that of a lion is a king; one whose waist is like that of a camel is poor; one whose belly is even (neither high nor low) is an enjoyer; and one whose belly is like a pot or vessel is poor. (Here says Samudra—)

Marks of the flank, side, and belly—
A man with an uninjured (complete) flank (*pāśrva*—the four-aṅgula part above the waist) is wealthy; one with a low and crooked flank is not an enjoyer; one with an even side (*kukṣa*, the middle part of the belly) is an enjoyer; and one with a low side is not an enjoyer. One with elevated sides is a king; one with uneven sides is harsh; and one whose belly is long like a serpent's belly is poor and eats much. (Here says Samudra—)

Marks of the navel—
Men whose navel is round, high, and broad are happy. A small, invisible, and not-elevated navel is sorrow-giving. A navel situated in the middle of the belly-folds and uneven causes impalement and makes one poor. A counterclockwise navel makes one deceitful, and a clockwise navel makes one a knower of truth. A rectangular navel on both sides makes long-lived; a rectangular navel upwards gives sovereignty; a rectangular navel downwards gives cows; and a navel like the cup of a lotus makes a king.

Marks of the belly-folds—
A man with one fold (line of the abdomen) dies by a weapon; with two folds he enjoys many women; with three folds he is an instructor; with four folds he is endowed with many sons; and one whose belly is without folds is a king. With uneven (small and large) folds one goes to a woman not to be approached; and with straight folds a man is happy and averse to others' wives.

Marks of the flank—
Men whose flanks are well-nourished, soft, and endowed with clockwise-turned hairs are kings. With opposite marks (without flesh, hard, and with counterclockwise hairs) they are poor, miserable, and slaves of others. (Here says Samudra—)

Marks of the nipples (tips of the breasts)—
Men whose nipples are not drawn upward are handsome. Those whose nipples are unequal (small and large) and long are poor. And those whose nipples are hard, full, and downward are kings and happy. (Here says Samudra—)

Marks of the heart—
The hearts of kings are high, broad, and without tremor. The hearts of the poor have opposite marks (low, thin, tremulous, and with harsh hairs) and are pervaded by veins.

Marks of the chest—
Men with an even (neither high nor low) chest are wealthy; with a small chest are without enterprise; with an uneven chest are poor and die by weapons. (Here says Samudra—)

Marks of the collar-bones (jatrū)—
A man with uneven collar-bones is cruel; one whose collar-bones are pervaded by bony joints is poor; and a man with full collar-bones is wealthy. (Here says Samudra—)

Marks of the neck and back—
A man with a flat neck is poor; with a neck filled with dried veins is poor; with a neck like that of a buffalo is brave; and with a neck like that of a bull dies by weapons. And one with a neck like a conch is a king, and one with a long neck eats much. An unbroken and hairless back is of the wealthy; a broken and hair-endowed back is of the poor.

Marks of the armpit—
Armpits without sweat, full, high, fragrant, even, and covered with hairs belong to the wealthy.

Armpits with sweat, not full, low, foul-smelling, uneven, and hairless belong to the poor. (Here says Samudra—)

Marks of the shoulders—
Shoulders that are fleshless, hairy, broken, and small are those of the poor. Broad, unbroken, and mutually joined shoulders belong to happy and strong men. (Here says Samudra—)

Marks of the arms—
Arms cylindrical like an elephant's trunk, long up to the knee, even, and thick belong to kings. Hairy and short arms belong to the poor. (Here says Samudra—)

Marks of the fingers and hand—
In long-lived men the fingers are long; in handsome men they are straight; in intelligent men they are thin; and in servants of others the fingers are flat. Men with thick fingers are poor; and men with fingers bent outwards die by weapons. Those with hands like a monkey are wealthy, and those with hands like a tiger are sinful. ॥ ३६–३७ ॥

Marks of the wrist (maṇibandha)—
Kings have wrists (base of the hand) with concealed, firm, and well-articulated joints. A man with small wrists has his hand cut off, and one with a wrist accompanied by sound is poor. ॥ ३८ ॥

Marks of the palm—
One with a low palm is deprived of the father's wealth; one with a round and low palm is wealthy; and one with a high palm is liberal. One with an uneven palm is wicked and poor; one whose palm is red like lac is wealthy; one whose palm is yellow goes to a woman not to be approached; and one with a dry palm is poor. ॥ ३९–४० ॥

Marks of the nails—
Men whose nails are marked with lines like chaff are eunuchs; with bad and colourless nails are those who look at another's face; and with copper-coloured nails are generals. ॥ ४१ ॥

Marks of the barley-line and the joints of the fingers—
Those whose barley-line is on the middle of the thumb or at the base of the thumb are soned. Those whose finger-joints are long are fortunate and long-lived. ॥ ४२ ॥

Marks of the lines of the palm and of the fingers—
Lines that are smooth and deep belong to the wealthy, and lines that are rough and raised belong to the poor. A man with sparse fingers in the hand is poor, and one with compact fingers is an accumulator of wealth. ॥ ७३ ॥

He whose three lines go out from the wrist and enter into the palm is a king. One whose palm is endowed with two fish-lines is a giver of continuous charity (*sadāvarta*). If the hand has a line like a thunderbolt (thin in the middle and expanded at both ends), he is wealthy; if like a fish, he is learned; and if the lines are like a conch, parasol, palanquin, elephant, horse, and lotus, he is a king. If the hand has a line like a pot, lotus-fibre, banner, or goad, he buries wealth in the

earth. If the line is like a rope, he is very wealthy; if the line is like a *svastika* (like a royal mansion), he is lordly. If the hand has a line like a discus, sword, axe, spear, lance, bow, or javelin, he is a commander; and if the line is like a mortar, he is a sacrificer. If the line is like a *makara* (crocodile), banner, and treasury, he is very wealthy; and if the *brahma-tīrtha* (base of the thumb) is like an altar, he is an Agnihotrin. If the hand has a line like a pond, a temple of the gods, etc. (throne, auspicious tree, and sacrificial post), or like a triangle, he is religious. And in the base of the thumb, as many thick lines as there are, so many sons; and as many fine lines, so many daughters. Those in whom three lines go up to the base of the index finger live for a hundred years. If the lines are short, lifespan should be estimated proportionally. Those whose lines are broken fall from a tree. If there are too many lines or no lines, they are poor. (Here says Samudra—)

Marks of the chin, teeth, and lips—

Men with very thin and long lips are poor, and those with fleshy lips are wealthy. Those whose lips are red like the *bimba* fruit and free from crookedness are kings; those with small lips are kings; and those with cracked, broken, colourless, and dry lips are without wealth. Teeth that are smooth, dense, sharp, and beautiful are auspicious. It is also said—

Marks of the tongue and palate—

Those with a red, long, auspicious-marked, and even tongue are enjoyers. Those with a white, black, and rough tongue are poor. In the same way, one should know the mark of the palate.

Marks of the face—

A face that is beautiful, round, pure, auspicious-marked, and respectable is of kings. The reverse (ugly, crooked-shaped, impure, without auspicious marks, and uneven) face is of one devoid of fortune.

(Here says Samudra—)

One whose face is like a woman's is without offspring; with a round face is deceitful; with a long face is poor; with a fearful face is crafty; with a low face is sonless; with small happiness is miserly; and one whose face is complete and beautiful is an enjoyer. (Here says Samudra—)

Marks of the beard—

A beard that is un-split in front, smooth, soft, and drooping downward is auspicious. And one with a red, rough, and scant beard is a thief. (Here says Samudra—)

Marks of the ear—

Those with fleshless ears die through sinful acts. Those with flat ears are great enjoyers; those with small ears are miserly; those whose ears are sharp in front like a cone are commanders; those with hairy ears are long-lived; those with large ears are wealthy; those with ears pervaded by veins are cruel; and those with long and full ears are happy. (Here says Samudra—)

Marks of the cheek and the nose—

Men with high cheeks are wealthy, and those with fleshy cheeks are ministers of a king. Those

with a parrot-like nose are enjoyers and happy; those with a fleshless nose are long-lived; those whose nose is as if cut go to a woman not to be approached; those with a long nose are fortunate; those whose nose is drawn upward are thieves; those with a flat nose die at a woman's hand; those whose nose is crooked in front are wealthy; those whose nose bends to the right are gluttonous and cruel; and those with a straight nose, furnished with small apertures and beautiful nasal wings, are fortunate. (Here says Samudra—)

Marks of sneezing—

He who, at the time of sneezing, sneezes only once is wealthy; and those whose sneezes are of two or three times, combined with *hādi* (heard among many while one is speaking), *sānuvāda* (very prolonged), and the aforesaid *saṃhata* (equal at the beginning, middle, and end)—such men are long-lived.

(Here says Parāśara—)

Marks of the eye—

Those whose eyes are like lotus petals are wealthy; those with red eye-corners are endowed with Lakṣmī; those with honey-yellow eyes are wealthy; those with cat-like (narrow-pupilled) eyes are sinful; those with round and steady eyes like a deer are thieves; those with blue eyes are cruel; those with eyes like an elephant's are commanders; those with deep eyes are lordly; and those with eyes like the blue lotus petal are learned. Eyes whose pupils are very black are gouged out. Those with thick (large) eyes are ministers; those with tawny-coloured eyes are fortunate; those with wretched eyes are poor; and those with smooth and large eyes are wealthy and enjoyers. (Here says Samudra—)

Marks of the eyebrow—

Those whose eyebrows are high in the middle are short-lived; with extended and elevated eyebrows are exceedingly happy; with unequal eyebrows (one large, one small) are poor; with eyebrows bent like the young moon are wealthy; with long eyebrows not meeting each other are wealthy; with broken eyebrows are poor; and men with eyebrows depressed in the middle go to a woman not to be approached. (Here says Samudra—)

Marks of the temples and the forehead—

Those with high and large temples are wealthy, and those with low temples are bereft of sons and wealth. Those with a crooked forehead are wealthy; those with a broad forehead like a shell are teachers; those with a forehead pervaded by veins are engaged in sin; those with a raised vein in the middle of the forehead are wealthy; and those with a swastika-like line on the forehead are very rich. Those with a low forehead are subject to killing and bondage and engaged in sinful acts; those with a high forehead are kings; and those with a round forehead are miserly. (Here says Samudra—)

Marks of crying—

For men, crying that is free from wretchedness, without tears, and smooth is good; and crying that is rough, wretched, and with many tears is not good.

Marks of laughing—
Laughing without trembling is auspicious. One who laughs with closed eyes is sinful; one who laughs repeatedly is wicked; and one who laughs again and again at the end of laughter is a man possessed of madness.

Marks of the forehead-lines—
Those with three lines on the forehead live for a hundred years; with four lines are kings and live ninety-five years. Those with broken lines on the forehead go to a woman not to be approached and live ninety years; those with a forehead without lines live ninety years; and those whose lines reach to the hairline live eighty years. Those with five lines live seventy years; if all the lines situated on the forehead meet at their tips, the lifespan is sixty years. Those with six, seven, and many lines live fifty years. If there is a crooked line on the forehead, the lifespan is forty years. If there is a line attached to the eyebrow, the lifespan is thirty years. If there is a crooked line on the left side of the forehead, the lifespan is twenty years. If the line is short, he lives less than twenty years. If the forehead has few (one or two) lines, the lifespan is also less than twenty years. In between, one should estimate the lifespan by one's judgment; for example, those with three lines live a hundred years and those with four lines live ninety-five years; therefore, one with three-and-a-half lines will live ninety-seven and a half years. In the same way elsewhere also, by calculation, one should determine the lifespan. (Here says Samudra—)

Marks of the head—
Those with a round head are endowed with cows; those with a head expanded above like a parasol are kings; those with a flat head are slayers of father and mother; and those with a head like a skull-cap (helmet) are long-lived. Those with a head like a pot are sinful and poor; those with a low head are reputed; and those with a very low head are doers of calamity. (Here says Samudra—)

Marks of the hair—
If in one follicle there is one hair; if the hairs are black, smooth, slightly curled, with un-split tips, soft, and dense—then he is happy or a king. If in one follicle are many hairs, and the hairs are unequal (some small, some large), tawny, thick, with split tips, rough, short, very curled, and very dense—these hairs belong to the poor. (Here says Samudra—)

Summary marks of all limbs—
Whatever limbs are rough, fleshless, and pervaded by veins—all these are inauspicious; and limbs opposite to these (smooth, fleshy, and free from veins) are auspicious. ॥ ८३॥

Marks of a great man—
He whose three limbs are broad, three deep, six high, four small, seven red, and five limbs long or fine—he is a king. ॥ ८४ ॥

Division of the limbs—
If in men the navel, voice, and *sattva* (a quality of mind—*avikāraṃ sattvaṃ vyasanābhyudayāgame*) are these three deep, and the chest, forehead, and face—these

three—are broad, then he is excellent. If in men the chest, armpit, nails, nose, face, and *kṛkāṭikā* (nape) — these six limbs — are high, and the linga, back, neck, and shank — these four — are small, then they give good results. If in men the ends of the eyes, soles, hands, palate, lips, tongue, and nails — these seven limbs — are red, then they give happiness. The teeth, joints of the fingers, hair, skin, and nails — these five limbs — being fine are not of the unhappy; that is, those whose these limbs are fine are happy. The jaw, eyes, arms, nose, and the middle between the two breasts — these five limbs being long belong to none other than kings.

(Here says Garga—)

Marks of the shadow—
Those who know the marks of shadow should consider the shadow which declares auspicious and inauspicious results to men and which manifests, like the light of a lamp placed in a pot made of crystal gems, the qualities pertaining to brilliance. ॥ ८९ ॥

Marks of the earthly shadow—
Of the creature whose teeth, skin, nails, hairs, and head-hair are smooth and whose body is fragrant, over him one should know the shadow of earth. The shadow of earth effects nourishment, gain of wealth, prosperity, and daily inclination toward righteousness. ॥ ९० ॥

Marks of the water shadow—
The shadow of water is smooth, white, clear, blue, and pleasing to the eyes. That shadow bestows good fortune, gentleness, happiness, and prosperity, accomplishes all actions, and is helpful like a mother. ॥ ९१ ॥

Marks of the fire shadow—
The shadow of fire is irascible, not to be slighted by anyone, with lustre like lotus, fire, and gold, and endowed with brilliance, prowess, and majesty. The fire-shadow is for the victory of creatures and quickly grants the accomplishment of desired aims. ॥ ९२ ॥

Marks of the airy and the ethereal shadow—
The shadow of air is impure, rough, black, and foul-smelling. That shadow brings killing, bondage, disease, obstacles to gain, and destruction of wealth. The shadow of ether is of splendour like crystal. That shadow is endowed with fortune, very liberal, a treasure of auspicious deeds, and of clear colour. ॥ ९३ ॥

According to others, five more shadows—
In order—earth, water, fire, air, and ether—these shadows I have spoken. Some sages say there are ten shadows: namely the five shadows of earth, etc., stated before, and the five shadows of Sun, Viṣṇu, Indra, Yama, and Moon—thus they say ten shadows. But the marks and results of the five shadows of the Sun, etc., are the same as those of earth, etc.; therefore I, abridging the ten shadows, have spoken of five shadows.
(Here says Garga—)

Marks of the voice—
Men whose voice is like that of an elephant, bull, chariot-array, kettle-drum, drum, lion, or cloud

are kings; and those with the voice of an ass, broken (distorted), and rough are devoid of wealth and happiness.

The seven essences in the human body—
In the body there are seven essences: fat (the unctuous part within the bones), marrow (the unctuous part within the skull), skin, bone, semen, blood, and flesh. Briefly, their results are told. ॥ ९६ ॥

Marks of blood-essence—
Those whose palate, lips, teeth, flesh, tongue, ends of the eyes, anus, hands, and feet are all red—these men are of blood-essence. Men of blood-essence are endowed with much happiness, women, wealth, and sons. ॥ ९७ ॥

Marks of skin-, marrow-, and fat-essence—
Men with smooth skin are wealthy; with soft skin are fortunate; and with thin skin are learned. Those with marrow-essence and those with fat-essence are handsome, have sons, and are wealthy. ॥ ९८ ॥

Marks of bone- and semen-essence—
A man of bone-essence has thick bones, is strong, learned, and handsome. A man of semen-essence—whose semen is thick—is fortunate, learned, and handsome. ॥ ९९ ॥

Marks of flesh-essence and of compactness—
A man of flesh-essence has a stout body, is learned, wealthy, and handsome. The well-joining of all limb-joints is called *saṅghāta* (compactness). Men endowed with compactness are happy.

Marks of unctuousness—
One should consider unctuousness in these five places: speech, tongue, teeth, eyes, and nails. Those whose these five are smooth are endowed with sons, wealth, and good fortune; if rough, they are poor. ॥ १०१ ॥

Marks of colour—
The complexion of kings is lustrous and smooth; that of the wealthy with sons is middling; and that of the poor is rough. Pure and smooth colour is auspicious, and mixed colour is inauspicious. ॥ १०२ ॥

Marks of *anūka* (former birth)—
By observing the face one should infer the former birth. The men whose faces are like a cow, bull, tiger, lion, or Garuḍa have a good former birth, and they are kings with irresistible majesty and conquerors of enemies. Those whose faces are like a monkey, buffalo, boar, or goat have a middling former birth, and they are endowed with learning, wealth, and happiness. Those whose faces are like a donkey or a camel have an inauspicious former birth, and they are devoid of wealth and happiness. ॥ १०३–१०४ ॥

Marks of height (Unmāna)—
If a man's height, measured by his own fingers, is 108 aṅgulas, he is excellent; if 96 aṅgulas, he is middling; and if 84 aṅgulas, he is inferior. ॥105॥

Marks of weight (Māna)—
In one *bhāra* there are two thousand *palas*. A man of half a *bhāra* is happy; less than that, unhappy; one of a full *bhāra* is extremely wealthy; and one of a *bhāra* and a half is a universal emperor (*cakravartin*).

When to examine height and weight—
The height and weight should be examined in a woman of twenty years and a man of twenty-five years; or, when one fourth of the calculated span of life has passed, then the height and weight should be considered. ॥107॥

Marks of nature (Prakṛti)—
Men possess natures (qualities, *sattva*) of earth, water, fire, air, ether, divine, human, demoniac, ghostly, and animal dispositions. Their characteristics are as follows. ॥108॥

Marks of the earthly and watery natures—
A man of the earth nature is fragrant like lovely flowers, an enjoyer, of sweet-scented breath, and of steady disposition. A man of the water nature drinks much water, speaks sweetly, and delights in sweet tastes. ॥109॥

Marks of the fiery and airy natures—
A man of the fire nature is restless, wicked, cruel, unable to endure hunger, and a great eater. A man of the air nature is restless, weak, and quickly subject to anger. ॥110॥

Marks of the ether and divine natures—
A man of the ether nature is skilful in works, open-mouthed, adept in knowledge of Sanskrit words, and has limbs marked with small holes. A man of divine nature is liberal, little prone to anger, and loving. ॥111॥

Marks of the human nature—
A man of human nature delights in song and ornaments and is helpful to his relatives. ॥112॥

Marks of the demoniac and ghostly natures—
A man of demoniac nature is irascible, wicked in disposition, and sinful. A man of ghostly nature is restless, impure, very talkative, and stout-bodied. ॥113॥

Marks of the animal nature—
A man of animal nature is timid, unable to bear hunger, and a great eater. Thus are described the marks of the natures of men, which those versed in the marks of nature call *sattva*. ॥114॥

Marks of gait (Gati)—
Men whose gait is like that of a lion, a swan, a must elephant, a bull, or a peacock are kings.

Those of soundless and slow gait also are wealthy. Those of quick gait, or gait like a frog, are poor. ॥115॥

Marks of a fortunate man—
That man who, when weary, obtains a vehicle; when hungry, obtains food; when thirsty, obtains water; and when afraid, obtains a protector — the learned who know the marks of men declare that man to be fortunate. ॥116॥

Chapter – 69

अथ पंचमहापुरुषलक्षणाध्यायः **(Pañca Mahāpuruṣa Lakṣaṇa Adhyāya – Chapter on the Marks of the Five Great Men)**

First, statement of purpose—
When Mars and the other four planets, endowed with positional, directional, motional, and temporal strength, being in their own or exalted signs, occupy the ascendant, the fourth, seventh, or tenth house, then five noble persons are born. Their marks I now declare. ॥1॥

Division of the five Mahāpuruṣa yogas—
If Jupiter, being strong, is situated in his own or exalted sign in a kendra, it is the Haṃsa yoga; if Saturn, it is Śaśa; if Mars, Rucaka; if Mercury, Bhadra; and if Venus, Mālavya yoga.

(From *Sārāvalī*)—

Special attributes from the strength of the Sun and the Moon—
When the Sun is strong, one possesses complete firmness of *sattva*; when the Moon is strong, one has mental strength. The man becomes endowed with the qualities of the lord of that sign whose divisions (sign, *horā*, *dreṣkāṇa*, *navāṃśa*, *dvādaśāṃśa*, and *triṃśāṃśa*) the Sun and Moon occupy — such as its element, great element, nature, brilliance, colour, *sattva*, and form. The man will also bear the qualities of those planets in whose sign-divisions the strong Sun and Moon are placed. Or if one of the Sun or Moon is strong and is placed in the sign-division of a certain planet, the man has the qualities of that planet. If both are weak, and are placed in the sign-divisions of two planets, the man partakes of mixed qualities of both.

From which planet which quality is derived—
From Mars comes *sattva* (strength, vigour); from Mercury, weight or dignity; from Jupiter, voice; from Venus, affection; and from Saturn, motion or constancy. If Mars, etc., be strong, one possesses these qualities; if weak, one lacks them.
(From *Sārāvalī*)—

Special note on the mixed type—
A person of mixed marks does not become a king, yet in the periods of Mars and other planets he is happy. Differences arise from the aspects of benefic and malefic planets moving from their

own, debilitation, or exaltation signs. From these variations arises the defect of mixture in a man.

Measures of the Haṃsa and other types—
The Haṃsa man has a height of 96 aṅgulas and an equal span (the stretch of both arms). By adding three aṅgulas successively to this measure, the heights and spans of the Śaśa, Rucaka, Bhadra, and Mālavya men are obtained.
(Here says Parāśara—)

Marks of the three guṇas—
Men of *sattva-guṇa* possess compassion, steadiness, simplicity towards beings, and devotion to the gods. Men of *rajo-guṇa* are attached to poetry, art, fame, and women, and are exceedingly valiant. Men of *tamo-guṇa* are deceivers of others, foolish, lazy, angry, and prone to excessive sleep. Thus, with combinations (sattva–rajas, sattva–tamas, rajas–tamas, and sattva–rajas–tamas), there are seven types of men according to the classification of guṇas. ‖8–9‖

Marks of the Mālavya man—
The Mālavya man has a nose like that of an elephant, equal arms, arms long up to the knees, firm limb-joints, symmetrical and beautiful body, slender waist, thirteen aṅgulas in height from chin to head, ten aṅgulas oblique height from chin to the genital aperture, shining face and eyes, beautiful cheeks, even and white teeth, and thin lips. ‖10‖

Form of the Mālavya man—
The Mālavya man is a king who protects the people of Mālava, Maru, Kaccha, Suraṣṭra (Surat), Lāṭa, Sindhu, and the inhabitants of the Pariyātra mountain. He earns wealth by his own prowess and is of fine intellect. ‖11‖

Life-span and end of the Mālavya man—
The Mālavya man lives seventy years and departs life at a sacred place. Thus having described the marks of the Mālavya man well, the marks of the remaining Bhadra and others I now declare.
(From *Sārāvalī*)—

Marks of the Bhadra man—
The Bhadra man is stout, well-proportioned, with round and long arms; his height equals his full arm-span; and his cheeks are soft, delicate, and covered with fine hairs. ‖13‖

He is endowed with beautiful skin, with very thick semen, broad and strong chest, abundant *sattva-guṇa*, face like that of a tiger, steady disposition, peaceful nature, righteous, grateful, gait like that of an elephant, learned in many scriptures, handsome, with beautiful forehead and temples, skilled in arts, firm, with beautiful belly, hands and feet like lotus petals, yogic, with beautiful nose, and with arms even and united. ‖14–15‖

The body of the Bhadra man bears fragrance like that of earth moistened with fresh water, of *gandha-patra*, *kuḍuma*, elephant's must, or agar-wood. In each hair-follicle of the head is one black hair. His linga is hidden like that of a horse or elephant. ॥16॥

In the hand of the Bhadra man are lines like a plough, pestle, mace, sword, conch, discus, elephant, crocodile, lotus, and chariot. His wealth is enjoyed even by others. He is devoid of anger towards his kinsmen and has independent intellect. ॥17॥

The Bhadra man is eighty-four aṅgulas in height, weighs one *tulā-bhāra*, and is king of the central land. If his span is one hundred and five aṅgulas, he is a universal monarch (*cakravartin*). ॥18॥

Marks of the life of the Bhadra man—
Having well enjoyed the earth acquired by his prowess, the Bhadra man, at the age of eighty years, departs life at a sacred place and goes to heaven.

From *Sārāvalī* —

Marks of the Śaśa Man (Born under Saturn's Mahāpuruṣa Yoga)
He has slightly prominent teeth, small teeth and nails, well-developed eye sockets, quick movement, and interest in learning and trade of metals. His cheeks are firm, and he is shrewd, a commander, fond of sexual union, inclined toward others' wives, brave, devoted to his mother, and fond of forests, mountains, rivers, and fortresses. ॥20॥

Measure of the Śaśa Man
He is ninety-two aṅgulas tall, doubtful in all undertakings, a seeker of others' faults, having marrow-essence, steady in gait, and free from excessive stoutness. ॥21॥

Palm and Foot Lines of the Śaśa Man
The middle part of his body is weak. In his hands or feet appear lines like a shield, sword, lute (*vīṇā*), couch, garland, drum (*mṛdaṅga*), or trident, or else raised lines resembling these. ॥22॥

Region, Nature, and Longevity of the Śaśa Man
He is a ruler of barbarian or provincial regions and suffers bodily pain due to dislocation of the hip. He rules for a time and meets death at seventy years, entering the abode of Yama.

Marks of the Haṃsa Man (Born under Jupiter's Mahāpuruṣa Yoga)
He has a red face, full cheeks, high nose, lustre like gold, round head, eyes the colour of honey, reddish nails, and hands and feet marked with lines like a garland, goad, conch, twin fish,

sacrificial instruments (*vedi*, *sruva*, etc.), pot, or lotus. His voice is sweet like that of a swan, his feet are beautiful, and his senses are pure. ॥24॥

Measure and Essence of the Haṃsa Man
The Haṃsa man is affectionate toward water, has semen-essence, and his height is ninety-six aṅgulas. ॥25॥

Region and Lifespan of the Haṃsa Man
He rules the lands of Nepal, Śūrasena, Gandhāra, and the regions between the Ganges and Yamunā. After reigning for ninety years, he dies near a forest hermitage.

From *Sārāvalī* —

Marks of the Rucaka Man (Born under Mars's Mahāpuruṣa Yoga)
The Rucaka man has beautiful eyebrows and hair, complexion reddish with a bluish tinge, neck like a conch, long face, brave, fierce, excellent, a minister, lord of thieves, and industrious. ॥27॥

Measure and Nature of the Rucaka Man
The central part of his abdomen equals the length of his face, shaped like a serpent's curve. He has little lustre, essence in blood and flesh, destroys enemies, and accomplishes work by his own courage. ॥28॥

Hand and Foot Signs of the Rucaka Man
In his hands or feet are marks resembling a warrior's weapon (*kṣaṭrāṅga*), lute, bull, bow, thunderbolt, spear, moon, or trident. He is devoted to preceptors, Brahmins, and gods, one hundred aṅgulas tall, and weighs one thousand *palas*. ॥29॥

Region and Lifespan of the Rucaka Man
The Rucaka man is skilled in mantras and magical rites (*abhicāra* such as marana, mohana, vaśīkaraṇa, etc.), has slender knees and thighs, rules over the Vindhya, Sahya, and Ujjayinī regions, and dies by weapon or fire at the age of seventy years.

(*Sārāvalī* also says —)

Classes of the Attendant Men (*Anucara* of the Five Great Ones)
Apart from the five Mahāpuruṣas mentioned above, there are their attendants, known as *saṅkīrṇa* or mixed types: Vāmanaka, Jaghanya, Kubja, Maṇḍalaka, and Sācī. Listen to their marks. ॥31॥

Marks of the Vāmanaka Man
The Vāmanaka man has complete limbs, a broken back, undeveloped thighs, middle part, and

armpit-space, serves the famous Bhadra king, is wealthy, powerful, and a devotee of Viṣṇu. ॥32॥

Marks of the Jaghanya Man

The Jaghanya man is a servant of the Mālavya king, has an ear shaped like a half-moon, beautiful joints, is intelligent, cunning, an informer, and has a dry bodily lustre and thick fingers. He is harsh, wealthy, slow-witted, famous, of coppery complexion, fond of laughter, and his chest, feet, and hands are marked with lines resembling a sword, spear, noose, and axe. ॥33–34॥

Marks of the Kubja Man

The Kubja man has the limbs below the navel full and the upper parts lean and bent, serves the Haṃsa king, is atheistic, wealthy, learned, cruel, secretive, and grateful. He is skilled in arts, fond of quarrels, attended by many servants, henpecked, and after honouring people suddenly abandons them. He is ever industrious. ॥35–36॥

Marks of the Maṇḍalaka Man

The Maṇḍalaka man serves the Rucaka king, is skilled in *abhicāra* rites (killing, bewitching, expelling, enchanting, causing enmity), in magical sciences concerning *kṛtyā* (female spirit raised by spells for slaying enemies) and *vetāla* (revival of corpses by mantra). He has a body like an old man, hard and rough hair, is expert in killing enemies, and has a mind devoted to Brahmins, gods, sacrifices, and yoga, though conquered by women and intelligent. ॥37–38॥

Marks of the Sācī Man

The Sācī man is very ugly, servant of the Śaśa king, disliked by people, generous, a starter of great undertakings which he completes, and shares the qualities of the Śaśa man. ॥39॥

Effect of Knowing the Marks of Men

Having considered the opinions of sages, I have thus described the marks of men. One who knows these marks becomes dear to kings and beloved by all people. ॥40॥

Chapter – 70

अथ स्त्रीलक्षणाध्यायः **(Adhyāya on the Marks of Women)**

Marks of the feet—

A maiden whose feet are smooth, high, slender at the front, with red nails, even, firm, beautiful, with concealed ankles, joined toes, and lustre like the lotus — such a one should be married by a man desiring sovereignty. ॥1॥

Marks of the legs, knees, thighs, genitals, and organ-tip—

A maiden whose soles are free from sweat, soft, marked with lines like fish, goad, lotus, barley, thunderbolt, plough, and sword; whose veins are invisible; whose thighs are round, hairless, and beautiful; whose knee-joints are stout and equal; whose thighs are thick and hairless like an

elephant's trunk; whose vulva is broad like the leaf of a peepal tree; whose waist is wide like the back of a tortoise; and whose *maṇi* (clitoris) is hidden — she bestows great prosperity. (Here says Samudra—)

Marks of the hips and navel—
Women with wide, full, heavy hips adorned with jingling girdles and with a deep, broad, right-spiralling navel are auspicious.

Marks of the middle part, breasts, chest, and neck—
A woman whose middle body is marked with three folds, free from hair, whose two breasts are round, full, equal, and firm, whose chest is smooth and tender, and whose neck has three lines like a conch — such a woman brings wealth and happiness. (Here says Garga—)

Marks of lips and teeth—
Lips like *bandhujīva* flowers, or red and lovely like the *bimba* fruit, and teeth white like jasmine flowers, bring conjugal happiness and great wealth to women.

Voice and nose—
The speech of a woman that is sweet, free from deceit, melodious like a cuckoo or swan, and without wretchedness, is most pleasing. A woman's nose that is even, with symmetrical nostrils and beauty, is commendable; and eyes with the lustre surpassing the blue lotus are auspicious. (Here says Garga—)

Eyebrows and forehead—
Eyebrows not meeting, neither too wide nor too long, and curved like the crescent moon are auspicious. Likewise, a forehead that is half-moon shaped, hairless, and neither raised nor depressed (even) is auspicious.

Ears, hair, and head—
A woman's ears, slightly fleshy, soft, equal, and attached are auspicious. Hair that is smooth, very black, soft, curled, and single in each follicle brings happiness; and a level (neither high nor low) head is auspicious.

Marks of palms and soles—
A woman whose palms or soles bear lines like a mirror, throne, horse, elephant, chariot, *bilva* tree, sacrificial post, arrow, garland, earring, fly-whisk, goad, barley, mountain, banner, archway, fish, *svastika*, altar, fan, conch, parasol, or lotus — she becomes a queen.

Marks of the hand—
A queen's hand is slender like a new lotus bud, with long-jointed fingers and concealed wrists. A palm that is neither low nor high and endowed with excellent lines ensures freedom from widowhood, happiness from sons, and wealth.

Upward line—
A line extending from the wrist to the middle finger, or a similar upward line on the sole, indicates royal happiness.

Line of longevity—
A complete line running from the base of the little finger to between the ring and middle fingers indicates full lifespan; if short, lesser lifespan.

Line of progeny—
At the base of the thumb are the lines of offspring — long ones signify sons, short ones daughters; unbroken lines denote long-lived children, broken ones short-lived children.

Now the inauspicious marks—
Such are the auspicious marks of women; their opposites are inauspicious. Specially, the inauspicious marks are these:

Feet—
If a woman's little or ring toe does not touch the ground, or if her index toe is longer than her big toe, she is adulterous and extremely sinful.

Thighs and genitals—
Women with drawn-up calf muscles, veins visible, dry or hairy thighs, overly fleshy or left-curving thighs suffer from diseases; with low, small vulva and pot-shaped belly they experience misery.

Neck—
A woman with a short neck is poor; with a very long neck destroys her lineage; and with a thick neck is cruel-natured.

Eyes and cheeks—
A woman whose eyes are yellow, dark, restless, or squinting is of bad nature; one whose cheeks form dimples when she laughs is adulterous.

Other marks—
A woman with a long forehead kills her husband's younger brother; with a long belly kills her father-in-law; with long buttocks kills her husband. One with much hair on the upper lip or of excessive height is inauspicious to her husband.

Breasts, ears, and teeth—
A woman whose breasts and ears are hairy, impure, ugly, or uneven suffers distress; one whose teeth are thick, protruding, uneven, and black-fleshed is a thief.

Hands—
A woman whose hands are marked with birds of prey, wolf, crow, vulture, serpent, or owl, or whose hands are dry, veined, or uneven in size, is devoid of wealth and happiness.

Other minor signs—
A woman whose upper lip is raised or whose hair tips are rough is quarrelsome. Generally, ugly women have defects and beautiful women have virtues.

Division of the body for temporal prediction—
For determining periodic auspicious or inauspicious results, the body is divided into ten parts:

1. Foot including ankle,
2. Shin with knee,
3. Thighs with genital region,
4. Navel and waist,
5. Abdomen,
6. Heart with breasts,
7. Shoulders and shoulder joints,
8. Lips and neck,
9. Eyes with eyebrows,
10. Head with forehead.

Likewise, divide the full span of life (120 years) into ten equal parts. If the first bodily part bears auspicious marks, the first tenth of life brings good results; if inauspicious, the first period brings adversity. In the same way, for each succeeding part, the results—good or bad—are experienced in the corresponding tenth of life. ॥24–26॥

Chapter – 71

अथ वस्त्रच्छेदनलक्षणाध्यायः **(Adhyāya on the Marks of Cloth and Its Omens)**

Effects of wearing new garments under various lunar constellations (Nakṣatras):
If a person wears new garments under the following Nakṣatras, these are the results—
In **Aśvinī**, gain of many garments; in **Bharanī**, loss of clothes; in **Kṛttikā**, garments are burned by fire; in **Rohiṇī**, gain of wealth; in **Mṛgaśīrṣa**, fear of garments being gnawed by rats; in

Ārdrā, death; in **Punarvasu**, attainment of good fortune; in **Puṣya**, gain of wealth; in **Āśleṣā**, destruction of clothes; in **Maghā**, death; in **Pūrvaphālgunī**, fear from the king; in **Uttaraphālgunī**, gain of wealth; in **Hasta**, success in undertakings; in **Citrā**, attainment of auspicious results; in **Svātī**, gain of fine food; in **Viśākhā**, becoming beloved of people; in **Anurādhā**, meeting with friends; in **Jyeṣṭhā**, loss of garments; in **Mūla**, fear of drowning in water; in **Pūrvāṣāḍhā**, disease; in **Uttarāṣāḍhā**, gain of sweets; in **Śravaṇa**, eye disease; in **Dhaniṣṭhā**, gain of grain; in **Śatabhiṣaj**, danger from poison; in **Pūrvabhādrapadā**, fear from water; in **Uttarabhādrapadā**, gain of son; and in **Revatī**, gain of blood or vitality. ॥1–7॥

Even when the Nakṣatra is unfavorable, wearing a garment for marriage, royal audience, or on a Brahmin's command gives good results. ॥8॥

Ninefold division of a garment and its omen:
The new garment is divided into nine parts: in the four corners reside deities, in the middle between beginning and end portions (the root) reside men, and in the three central parts reside demons (*rākṣasas*). The same division should be applied to beds, seats, and footwear. (Here says *Garga*)

Purpose and omen of the ninefold division:
If a new garment becomes soiled by ink, mud, or dung, or is burnt or torn, one should know whether the resulting omen is wholly good or bad. If the cloth is medium-quality, the omen is moderate; if very old, the omen is slight. But if the cloth is an upper garment, the omen—good or bad—is intensified. ॥10॥

If ink or stain appears in the portion assigned to demons, it indicates disease or death; in the portion of men, gain of son and vigor; in the portion of gods, increase in pleasures. If the stain touches all parts, misfortune results — so say the sages. ॥11॥

If in the gods' portion the tear or hole resembles a vulture, frog, owl, pigeon, crow, carnivorous bird, jackal, camel, or serpent, it portends danger of death. ॥12॥
If in the demons' portion the tear or mark resembles an umbrella, banner, *svastika*, *vardhamāna* symbol, *bilva* tree, pot, lotus, archway, ladle, vessel, ornament, elephant, or horse, it signifies sudden gain of wealth and prosperity. ॥13॥

Even when the Nakṣatra is inauspicious, garments received from a king or worn at marriage with Brahminical sanction bring good fortune. ॥14॥

Chapter – 72

अथ चामरलक्षणाध्यायः **(Adhyāya on the Marks of the Fly-Whisk)**

Purpose of the Fly-whisk (*Cāmara*)—
The gods created the yak (*cāmari*) in the caves of the Himalayas for the purpose of its tail-hair. The hairs of its tail are yellow, black, and white. ॥1॥

Qualities of the hairs—
Smooth, soft, glossy, unentangled, short, and having small mid-bones—such hairs are auspicious. But broken, split, short, or uprooted hairs are inauspicious. ॥2॥

Mark of the handle (*daṇḍa*)—
The handle of a fly-whisk should be one and a half cubits, one cubit, or one *aratni* (length of a clenched fist). Made of excellent wood plated with gold, silver, and gems, it is fit for kings. ॥3॥

Colour of the handle according to caste—
The colours of the staff (*yaṣṭi*), umbrella (*chatra*), goad (*aṅkuśa*), cane (*vetra*), bow (*dhanus*), canopy (*vitāna*), spear (*bhāla*), banner (*dhvaja*), and fly-whisk (*cāmara*) should be, respectively, yellow, golden, reddish, honey-coloured, and black, suiting the Brahmin and other classes in order. Thus they bring auspiciousness appropriate to their holders. (Here says *Marma*)

Results from the number of sections (*parva*) in the staff—
A staff with two joints causes loss of mother; with four joints, loss of land; with six, loss of wealth; with eight, destruction of family; with ten, disease; with twelve, death.

Results from odd-numbered joints—
If the staff has three joints, victory in travel; five, destruction of enemies; seven, great gain; nine, acquisition of land; eleven, increase of cattle; and thirteen, attainment of desired objects by the owner. ॥6॥

Chapter – 73

अथ छत्रलक्षणाध्यायः **(Adhyāya on the Marks of the Royal Umbrella)**

Purpose of the Umbrella (*Chatra*)—
The royal umbrella should be made of the feathers of swan, cock, peacock, or crane; newly constructed; covered with fine white cloth; decorated with strings of pearls hanging around; its handle set with crystal. It should have a golden staff six hands long, made of wood, having seven or nine joints, and the breadth equal to three hands of that staff. It should be circular, beautifully adorned with gems, and enclosing the king from all sides. Such an umbrella bestows prosperity and victory upon the ruler. (Here says *Garga*)

Measure for the umbrellas of crown prince and others—
The umbrella of the crown prince, queen, commander, and chief officer should have a staff four and a half hands long and a diameter of two and a half hands. ॥4॥

Umbrellas of other princes—
For other royal sons, the umbrella should be made of peacock feathers, adorned with ornamental fringes and strings of jewels, serving to protect from sunlight.

Umbrellas for non-royals—
For ordinary men, the umbrella should be four-cornered, protecting from sun and rain; for Brahmins, it should be round with a circular staff. ॥6॥

Chapter – 74

अथ स्त्रीप्रशंसाध्यायः **(Adhyāya on the Praise of Women)**

Purpose—
Even though the whole earth is possessed, its essence lies in one's own capital; within that, one's own house; within that, one's own chamber; within that, one's bed; and upon that bed, the jewel-adorned woman — she is the essence of royal happiness. ॥1॥

Praise of women—
Jewels adorn women, yet women do not depend on jewels for beauty — for even without them, they captivate the heart; but jewels without the touch of women cannot enchant. ॥2॥

For kings, weighed down with secret worries, hiding pleasure or fear, striving to conquer enemy armies, anxious with manifold affairs, and watchful even toward sons and ministers — the embrace of a woman is their only moment of true happiness. ॥3॥

Brahmā created no other gem in the world besides woman, the very sight, touch, hearing, or remembrance of whom brings joy. Through women, both virtue (*dharma*) and wealth (*artha*) are served; from women come the pleasures of son and sense; therefore, women are Lakṣmī in the house and must ever be honored. ॥4॥

Those who, under guise of detachment, describe only the faults of women are evil men; their words carry no authority. ॥5॥

Whatever faults are seen in women were first committed by men — women learned them later. By arrogance, men overcame women, though women possess greater virtues — so says *Manu*. ॥6॥

Praise of Women by Manu and Others—
The Moon gave purity, the Gandharvas pleasant speech, and Fire the power to consume — thus women are like gold, ever radiant. ॥7॥
A Brahmin is pure through his feet, a cow through her back, a goat and a horse through their mouth, but a woman is pure in all her limbs. ॥8॥
There is nothing purer than women; their monthly flow removes their sins. ॥9॥
If dishonored women of a family curse a household, it perishes entirely like one destroyed by sorcery. ॥10॥

From woman arises mankind — from the mother directly, from the wife through the son; hence, O ungrateful one, how can your welfare stand if you revile either? ॥11॥

Both man and woman incur equal fault for adultery; yet man does not perceive the sin while woman does—therefore, women are superior to men. ॥12॥
A man who leaves his wife and unites with another's should cover himself with the hide of a donkey, hair turned outward, and beg for six months saying "Give alms"—thus only is he purified. ॥13॥
Even after a hundred years, a man's lust is not destroyed; only the decay of his body restrains him—whereas a woman renounces it through patience. ॥14॥
To revile pure women is as shameless as a thief crying "Thief!" after his own crime. ॥15॥
A woman embraces even her dead husband and enters the fire—such steadfastness no man can equal. ॥16॥

Further praise of woman—
A man who enjoys the company of a virtuous woman, though poor, is equal to a king; for food and woman are the essence of royal joy—all else is but fuel to feed the fire of desire. ॥17॥
The bliss gained from embracing a young, gentle, sweet-voiced woman with full breasts is greater, in my view, than that of Brahma's heaven. ॥18॥
What higher joy exists even in Brahma's world, worshipped by gods, sages, and celestial musicians, than the secret embrace of a woman? ॥19॥
From Brahmā to the smallest worm, the world is bound by union of man and woman—why feel shame, when even Lord Mahādeva, seeing Tilottamā, grew four-faced in desire? ॥20॥

Chapter – 75

अथ सौभाग्यकरणाध्यायः **(Adhyāya on the Creation of Good Fortune and Charm)**

Characteristics of a fortunate man—
A handsome and gracious man enjoys the full pleasures of Kāma (love). An unfortunate man, deprived of a woman's affection, knows only the shadow of happiness. Even from afar, when a woman meditates upon a man, she conceives by his subtle influence. ॥1॥

Origin of the self in woman—
As a tree arises from its own seed or cutting and none other, so in woman, the self (soul) produces offspring of its own essence; only the field (woman's body) provides distinction, as varieties of land yield varieties of trees. ॥2॥

Reason for passion arising at a distance—
The soul moves with the mind, the mind with the senses, and the senses with their objects. Thus the soul travels swiftly through connection. The mind knows no barrier; where it goes, the soul follows.

Hence it is said—
Within the heart of the Supreme Soul dwells this subtle individual self; through steadfast

meditation one perceives it. For whatever one constantly contemplates, one becomes that. Therefore, by continual remembrance, a woman unites with the beloved man. ॥4॥

Marks of the fortunate and unfortunate—
Acting in accordance with a woman's will is the chief cause of fortune (*saubhāgya*); acting contrary brings aversion. Enchanting a woman by spells or potions leads to faults and should be avoided. ॥5॥

Praise of graciousness—
By abandoning pride, a man becomes dear to all; pride brings misfortune. The proud man attains success with difficulty, but the humble, speaking sweetly, achieves his aim easily. ॥6॥

Those who act rashly lose their brilliance, as do those who speak harshly. True radiance belongs to the unboastful man who, though successful, remains humble—not to the self-praising. ॥7॥

Means of being beloved by all—
He who desires universal affection should praise others behind their back; one who slanders others attracts countless false accusations. ॥8॥

Fruit of beneficence—
He who is eager to help all receives help from all. To aid even enemies in distress brings fame greater than ordinary merit. ॥9॥

Instruction for the wicked—
Hidden virtues grow like fire covered by grass. He who seeks to destroy others' virtues gains only wickedness, for virtue cannot perish by denial. ॥10॥

Chapter – 76

अथ कान्दर्पिकाध्यायः **(Adhyāya on the Art of Kāma and Vitality)**

Statement of purpose—
During conception, if *rakta* (the female element) predominates, a girl is born; if *śukra* (the male element) predominates, a boy is born; and if both are equal, a neutral or impotent child results. Therefore, one should administer *rasa–āyana* (vitalizing elixirs) that increase semen and strength. ॥1॥

Things that bind the god of love (Kāmadeva)—
The terrace of a palace, the rays of the moon, blue lotuses, wine, a graceful beloved, the sound

of the lute (*vīṇā*), tales of love, solitude, and garlands—these all serve as the ropes that bind Kāmadeva. ॥2॥

Formulae for increasing semen (Śukra–vṛddhi yoga):
Gold, bee-wax, honey, mercury, iron-powder, *harītakī* (chebulic myrobalan), *śilājit*, and ghee—mix equal parts of these, powder finely, and take it with honey or ghee for twenty-one days. Even an eighty-year-old man then enjoys union like a youth. ॥3॥

He who drinks a decoction made by boiling the root of *kapikacchu* in milk never becomes weak in intercourse. Likewise, if *urad* (black gram) is cooked in clarified butter extracted from milk and eaten—six morsels, followed by milk—the man does not tire in lovemaking. ॥4॥

A man with many women should dry the powder of *vidārī-kanda* after twice soaking it in its own juice (*bhāvanā*), then take it and drink milk mixed with candy sugar. ॥5॥

Powder of *āmla* (Indian gooseberry) soaked twice in its own juice, dried, then licked with honey or sugar and followed by milk according to strength, enables a man to enjoy many women. ॥6॥

Boil the testicles of a goat in milk; then steep sesame seeds in that milk and dry them. Eating those seeds followed by milk gives irresistible virility—so much that even a boastful rival (*chaṭaka*) is powerless before him. ॥7॥

He who eats rice of the *sattī* variety cooked with black gram and ghee, and drinks milk afterwards, sleeps that night in company with the god of love himself. ॥8॥

Take equal parts of sesame, *aśvagandhā*, *kapikacchu* root, and *vidārī-kanda*; add an equal weight of rice-flour of the *sattī* variety; knead all in goat's milk, fry in goat's ghee to make *pūrīs*. These pastries greatly increase semen. ॥9॥

By eating powder of *gokṣura* (tribulus) or *vidārī-kanda* and drinking milk afterwards, one remains unexhausted in intercourse. If this powder fails to digest due to weak digestion (*mandāgni*), take first the following stimulant of gastric fire. ॥10॥

Digestive stimulant (Jaṭharāgni sandīpana yoga):
Powder together *ajvayin* (carom), salt, *harītakī*, dry ginger, and long pepper in equal parts; take with wine, sour gruel, *kāñjī*, or warm water. This kindles the gastric fire. ॥11॥

Causes of semen loss (Śukra–hāni yoga):
He who habitually eats excessively sour, bitter, salty, pungent, or alkaline foods, or too many leafy vegetables, becomes weak in sight, semen, and strength. Even though young, such a man behaves like an old one and fails in union, making many excuses.

Chapter – 77

अथ गन्धयुक्तिर्नामाध्यायः **(Adhyāya on Perfumery and Aromatic Preparations)**

Statement of purpose—
White-haired men do not look graceful with garlands, perfumes, incense, garments, or ornaments; therefore, just as one applies collyrium and adorns the body, so one should also darken the hair. ॥1॥

Method for blackening the hair—
Boil *kodo* rice in vinegar in an iron vessel; then add iron-powder and grind finely. Apply this paste (moistened with vinegar) to the greying hair, cover with fresh leaves, and sit for two *pahars* (about six hours). After washing it off, apply a paste of gooseberry (*āmla*), again cover with green leaves for half a day, then wash—the hair turns black. ॥2–3॥

After the hair becomes black, the king should remove the odour of iron and vinegar by washing the head and anointing with fragrant oils; then, perfumed with sweet scents and incense, he may enter his harem and enjoy royal pleasure. ॥4॥

Royal hair-washing mixture—
Powder together cinnamon, *kuṣṭha*, *reṇukā*, *nalikā*, *spṛkkā*, *bol* (myrrh), *tagara*, *netravālā*, *nāgakesara*, and fragrant leaves (*gandha-patra*) in equal parts; apply to the head and wash. This is the proper head-wash for a king. ॥5॥

Preparation of scented oil—
Take equal parts of *mañjiṣṭhā*, sea-foam (*samudra-phena*), shell-powder (*śukti*), cinnamon, *kuṣṭha*, and *bol*; grind, then infuse the powder in sesame oil and expose to the sun. The oil acquires the fragrance of champaka blossoms. ॥6॥

Formula of the Fourfold Perfume (Gandha-catuṣṭaya)—
Mix in equal parts fragrant leaves, *siṅhlaka*, *netravālā*, and *tagara*; this creates a scent exciting to love. By adding *vyāmaka* and fumigating with *guḍgulu* and *hiṅgu*, it yields a fragrance like *moulasari* flowers; adding *kuṣṭha* gives the scent of blue lotus; adding white sandal gives champaka fragrance; and adding nutmeg, cinnamon, and coriander gives the scent of *atimuktaka* flowers. ॥7॥

Another perfume mixture—
Take fennel and resin of *devadāru* (one-fourth part each), shell-powder and *siṅhlaka* (half part each), white sandal and *priyangu* (one-fourth each). Combine and fumigate first with *harītakī* and then with this powder. This produces a pleasant fragrance suitable for kings. ॥8॥

Method for making incense (Dhūpa):
Mix equal parts of *guggulu*, *netravālā*, lac, *motha*, shell-powder, and sugar to form one incense. Another may be made from *bālacchaḍa*, *netravālā*, *siṅhlaka*, shell, and sandal. ॥9॥

A complex incense may be prepared by taking *harītakī* one part, shell two, nail three, *bol* four, *netravālā* five, jaggery six, *kuṣṭha* seven, resin eight, and *motha* nine parts—thus one incense. Alternatively, take *guḍ*, *kuṣṭha*, resin, and *motha* in proportions of one to four for another; *resin*

and *motha* in ratio one to two for a third; *harītakī* one part and shell two for a fourth; adding nail three parts for a fifth—and so on, innumerable delightful incenses arise. ‖10‖

Royal incense called *Kopacchada*—
Mix *khāṇḍa*, *śaileya*, and *motha* four parts each, with *śrīvāsa*, *sarja*, shell, and *guggulu* two parts each. Grind, scent with camphor powder (*bodha*), then add honey and roll into pellets. This royal incense is called *Kopacchada*. Mixing moist with moist is called *bedha*; mixing powders with powders is *bodha*. (Here says *Īśvara*.) ‖11–12‖

Powder for perfuming garments (*Puṭa-vāsa*)—
Take cinnamon, vetiver (*khas*), and fragrant leaves three parts each; add half that quantity of small cardamom; powder together. Scent with musk or camphor (*bodha*). This makes the best powder for perfuming clothes. ‖12‖

Preparation of *Gandhārṇava* (Ocean of Perfumes)—
From among sixteen ingredients—*motha*, *netravālā*, *śaileya*, *kacūra*, vetiver, *nāgakesara* flowers, tiger-nail, creeper (*latā*), *aguru*, *damanaka*, shell, *tagara*, coriander, camphor, *choraka*, and white sandal—choose any four, combining them in ratios of one, two, three, and four parts respectively. This yields ninety-six varieties of perfumes named *Gandhārṇava*. ‖13–14‖

Because camphor and coriander have overpowering odour, one should use them in small proportion—camphor less than one part and coriander one part; never two or three parts, lest they suppress all other fragrances. ‖15‖

Each perfume must be separately fumigated with *śrīvāsa*, resin, jaggery, and shell—never all mixed together—and afterwards scented with camphor and musk. ‖16‖

Number of possible perfumes—
From the above combinations arise **174,720** varieties of perfumes. ‖17‖

How six perfumes come from two ingredients—
From only two substances, six perfumes can be made: by mixing first one part of the first with two, three, or four parts of the second, and conversely the second one part with two, three, or four of the first—thus six kinds. Similarly, combining two parts of one with two-three-four parts of the other gives again six varieties. ‖18‖

Hence with one ingredient there are six modes; with four combined, twenty-four; in remaining combinations of four at each of three levels, seventy-two; in total, ninety-six varieties. ‖19‖

Combinatory calculation (*Catur-vikalpa* principle)—
Among sixteen substances, taking four at a time gives 1,820 possible sets. ‖20‖
Multiplying these 1,820 by 96 yields 174,720 varieties by secondary process; but by principal process, multiplying 1,820 by 24 yields 43,680 main varieties. ‖21‖

Combinatorial rule (*Loṣṭaka-prastāra*) for computing varieties—
Write numbers from one up to the total number of ingredients in a vertical series; each new

number equals the sum of the numbers directly below it in the previous row, except the last. The totals thus obtained show the number of possible combinations. ॥22॥

Example of sixteen-fold perfumery circle (*caturaśra-cakra*)—
Make a square of sixteen cells, placing in the first row: agar-wood two parts, fragrant leaves three, *siṅhlaka* five, and *śaileya* eight; in the second row: *priyangu* five, *muṣṭa* eight, *bol* two, and *śālījātaka* three; in the third row: *spṛkkā* four, *tvak* (cinnamon bark) one, *tagara* seven, and *māṃsī* six; and in the fourth: sandal seven, shell six, *śrīvāsa* four, and *kuṃdaru* one part. ॥23–24॥

In this sixteen-cell circle, every combination of four ingredients whose total parts equal eighteen gives a distinct perfume. Mixing equal parts of shell, *tagara*, and *siṅhlaka* with equal parts of nutmeg, camphor, and musk for scenting, and fumigating with jaggery and shell, produces numerous *Sarvatobhadra* ("universally auspicious") perfumes. Because all diagonal and cross combinations total eighteen parts, these perfumes are called *Sarvatobhadra*. ॥25–26॥

Preparation of *Pārijāta Mukhavāsa* (Fragrant mouth freshener):
Select any four of the above substances according to rule, scent them with nutmeg, musk, and camphor, and moisten with honey mixed with mango juice. This yields many varieties of mouth perfumes resembling the fragrance of *Pārijāta* flowers. ॥27॥

Preparation of bathing powders (*Snānīya Cūrṇa*):
From the previously described fumigated mixtures, replace *śrīvāsa* and resin with *netravālā* and cinnamon; these produce numerous powders suitable for bathing. ॥28॥

Eighty-four kinds of saffron perfumes (*Keśara-gandha*):
Take nine substances—*lodha*, vetiver, *tagara*, *aguru*, *muṣṭa*, fragrant leaves, *priyangu*, *vana* (peripelva), and *harītakī*—and from these, by combining three at a time in the previously explained nine-cell arrangement, add sandal one part, *siṅhlaka* one part, *śuddhi* half part, and fennel one-fourth part. Fumigate with *katuka*, *guggulu*, and jaggery smoke. Thus are prepared eighty-four perfumes like the scent of *bakula* flowers. ॥29–30॥

Preparation of tooth-sticks (*Dantakāṣṭha*):
Soak sticks for cleaning teeth seven days in cow's urine mixed with *harītakī* powder; then dip them in perfumed water prepared from cardamom, cinnamon, fragrant leaves, *sauvīra*, honey, black pepper, *nāgakesara*, and *kuṣṭha*. Afterwards, rub with fine powder made from nutmeg four parts, fragrant leaves two parts, cardamom one part, and camphor three parts. Dry the sticks in sunlight. ॥31–33॥

Effects of using the prepared tooth-sticks—
Their use gives men a bright complexion, pleasing facial lustre, fragrant and pure mouth, and sweet-sounding speech. ॥34॥

Virtues of chewing betel (*Pān*):
Betel stimulates passion, enhances bodily beauty, brings fortune, perfumes the breath,

increases strength, destroys phlegmatic diseases, and grants many other benefits such as clarity of voice. ॥35॥

Betel containing lime in proper proportion excites love; with too much areca nut it quenches passion; with excess lime it gives foul odour to the mouth; with many leaves it increases fragrance. ॥36॥

Rules for eating betel by day and night—
At night, the betel leaf should be more abundant; in daytime, the areca nut should be more. The reverse brings ridicule. Betel containing *kakkola*, areca nut, *lavalī-phala* (clove fruit), and nutmeg gladdens the heart with delightful intoxication. ॥37॥

Chapter – 78

अथ पुंस्त्रीसमायोगाध्यायः **(Adhyāya on the Union of Man and Woman)**

Statement of purpose—
Queen of King *Vidūratha* slew her husband with a weapon hidden in her braid, and the estranged wife of the King of Kāśī poisoned him through her anklet. Thus, estranged women bring many fatal evils—what need to mention lesser faults? Hence, men should carefully examine whether their women are attached or disaffected. (Here says *Kāmandaki*.)

Marks of an Affectionate Woman (Anurakta Strī Lakṣaṇa)—
An attached woman reveals her passion through trembling, dryness of mouth, and paleness caused by love. She exposes her navel, arms, bosom, and ornaments; she dresses carefully, binds and unbinds her hair, arches her brows, and casts quivering glances. (Here says *Kāśyapa*.) Coughing loudly, laughing with sound, approaching her beloved's couch or seat, making sounds with her limbs, yawning, asking trifling things from her beloved, embracing and kissing children before him, looking at her friend while gazing at him sideways, praising his virtues, scratching her ear — all these are gestures of affection. Such a woman speaks sweetly, gives her property to her beloved, rejoices at his sight, hides his faults while extolling his qualities, honors his friends, hates his enemies, remembers past acts of love, sorrows when he departs, and willingly grants him touching, kissing, and embrace — these are all signs of an affectionate woman. (Kāśyapa.)

Marks of a Disaffected Woman (Virakta Strī Lakṣaṇa)—
Frowning, turning her face away from her husband, forgetting his deeds, disrespecting him, being difficult to please, befriending his enemies, speaking harsh words, trembling on seeing or

touching him, showing pride, not stopping him when departing, wiping her mouth after his kiss, sleeping before he does and waking after him—these are marks of a disaffected wife. (Kāśyapa.)

Agents of Women's Infidelity (Dūtīs)—
Beggar-women, ascetics, maids, wet-nurses, washerwomen, flower-sellers, wicked women, friends, and barbers' wives act as go-betweens leading women to illicit unions. They destroy family honor. Therefore, men must guard their women against such agents for the preservation of lineage, fame, and virtue. ‖9–10‖

Causes of a Woman's Ruin—
Going out at night, feigning illness to stay awake, visiting others' houses, and attending others' misfortunes or festivities—these are signs of infidelity. Women should be guarded against these. (Kāśyapa.)

Ideal Woman for Union—
Union should be with a woman who is modest yet not averse to tales of love, shy and languid before intercourse, fearless during it, modest afterward, respectful, and expressive through varied emotions. She knows her partner's moods and responds with sympathy in joy and sorrow. (Bāhulaka.)

Virtues of Women—
Youth, beauty, graceful attire, cleverness, proficiency in erotic arts, and charm in conversation and glance—these are her virtues. For a wise man, a virtuous woman is a jewel; one devoid of virtue is a disease. (Vyāsa.)

Women to Avoid—
One should not converse on erotic subjects with coarse-tongued or impure women. During union, a woman should not let her mind wander to other matters, for the mind is the root of desire—when distracted, pleasure vanishes. (Kāśyapa.)

Signs of a Virtuous Wife—
She exhales in rhythm with her husband's breath, lets him rest his head on her arm, presses her breast against his chest, has fragrant hair, sleeps only after him, and wakes before him—these are the marks of a virtuous wife.

Women to Avoid in Intercourse—
One of wicked nature or unable to bear the strain of union should be shunned. Women whose menses are black, blue, yellow, or coppery are unfit. Likewise, excessive sleepers, those with much blood or bile, constant discharge, talkativeness, excessive phlegm, fatigue, sweat, short or white hair, loose flesh, big belly, indistinct speech, or bearing inauspicious marks described earlier should be avoided. ‖16–18‖

Characteristics of Menstrual Blood—
If menstrual blood resembles rabbit's blood or lac, and is easily washable, it is pure. Blood that

is painless, silent, and ceases after three days is fertile and capable of conception through intercourse. ॥19–20॥

Conduct of a Menstruating Woman—
For three days she should avoid bathing, garlands, and unguents. On the fourth day she should bathe according to prescribed rites, using herbs and mantras mentioned in the *Puṣya-snāna Adhyāya*. ॥21॥

Threefold Division of Union—
On even nights of the menstrual period, sons are conceived; on odd nights, daughters. On distant even nights (sixth, eighth, etc.), long-lived, handsome, and fortunate sons are born. ॥23॥

Determination of Male, Female, or Neutral Birth—
If conception occurs in the right side of the womb, a male results; in the left, a female; in both sides, twins; in the center, a neutral (impotent) child. ॥24॥

Auspicious Time for Union—
When benefic planets occupy angular (1, 4, 7, 10) and trinal (5, 9) houses, the Ascendant and Moon are joined with benefics, and malefics are in the 3rd, 6th, or 11th houses, and when the *Pūṇyajanma Yoga* is active—then union is auspicious. ॥25॥

Rule during the Season (Maithuna-kāla-niyama)—
A man should not wound a woman's limbs with nails or teeth during her fertile period. The season of fertility lasts sixteen nights, but union should be avoided during the first three.

Chapter – 79

अथ शय्यासनलक्षणाध्यायः **(Adhyāya on the Characteristics of Beds and Seats)**

Purpose—
This science applies to all people at all times, but especially to kings; therefore, the marks of beds (*śayyā*) and seats (*āsana*) are described. ॥1॥

Auspicious Woods for Royal Beds and Seats—
Woods of *Vijayasāra*, *Spandana*, *Haridrā*, *Devadāru*, *Tindukī*, *Śāla*, *Kāśmarī*, *Añjana*, *Padmaka*, *Śāka*, and *Śiṁśapā* are auspicious for making beds and seats. ॥2॥

Inauspicious Woods—
Trees struck down by lightning, water, wind, or elephants; those having beehives or birds' nests; those growing in sacred groves, cremation grounds, or on roadsides; or overrun with dry creepers—these are unfit for beds or seats. ॥3॥ Thorny trees, those growing in great rivers or temples, or those that have fallen westward or southward are also inauspicious. ॥4॥

Results of Using Inauspicious Wood—
Beds and seats made from such wood bring ruin to the family, disease, fear, loss of wealth, quarrels, and many calamities. ॥5॥

Signs from the Felled Tree—
Before using timber for construction, observe omens at the time of felling. If a child climbs the felled tree uninvited, it indicates that the bed will bring offspring and cattle. ॥6॥

Auspicious Omens During Construction—
Seeing white flowers, intoxicated elephants, curd, rice grains, water-filled jars, gems, or other auspicious substances at the time of making a bed or seat ensures good fortune. ॥7॥

Measurements for the King's Bed—
Eight barley grains placed end to end make one *karma-aṅgula*. A bed of one hundred such units in length ensures royal victory. ॥8॥

Beds for Princes and Ministers—
The beds of the prince, minister, general, and royal priest should measure ninety, eighty-four, seventy-eight, and seventy-two *aṅgulas* respectively in length. ॥9॥

Proportion of Width and Height—
The width should equal half the length minus one-eighth of that half. The height of the bedposts (legs) should be one-third of the width, including the head and middle portions—so teaches *Viśvakarma*.

Effects of Various Woods—
A bed made of *Śrīparṇī* gives wealth; of *Asana* (Vijayasāra), removes disease; of *Tinduka*, grants riches; of *Śiṁśapā*, promotes prosperity; of *Sandalwood*, destroys enemies and grants fame and longevity; of *Padmaka*, gives long life, fortune, virtue, and wealth; and of *Śāla*, brings well-being. A bed made entirely of sandalwood, plated with gold and adorned with many jewels, brings such merit that even the gods worship the king who sleeps upon it. ॥11–14॥

Mixed Woods—
Beds made by mixing *Tindukī* or *Śiṁśapā* with other woods, or *Śrīparṇī* with *Devadāru* or *Asana*, are inauspicious. But *Śāla* with *Śāka*, or *Haridrā* with *Kadamba*, whether mixed or separate, gives good results. Beds made solely of *Spandana* wood are inauspicious; of mango wood, fatal. Mixing any other wood with *Asana* produces many defects. Yet if the legs of beds made of mango, *Spandana*, or sandalwood are themselves of *Spandana* wood, the result becomes favorable. Beds or seats made of fruit-bearing trees confer desired fruits. ॥15–18॥

Ivory Decoration—
Combining all these woods with elephant ivory is auspicious. Therefore, ivory of good marks should adorn royal beds and seats. ॥19॥

Characteristics of Ivory—
The circumference of the tusk's root, when doubled, determines the portion to be left from the

base; the remainder may be used. For elephants from watery lands, a little more should be left; for mountain elephants, a little less. ॥20॥

Omens from the Tusk's Marks—
If, when cut, the tusk bears marks resembling *bilva* fruit, *vardhamāna*, umbrella, banner, or fly-whisk, it grants health, wealth, and happiness. If it bears a mark like a weapon—victory; like a whirlpool—recovery of lost land; like a lump—regaining former possessions; like a woman—loss of wealth; like a mirror or vessel—discovery of treasure; like a staff—obstacle in travel; like a chameleon, monkey, or serpent—famine, disease, or captivity; like a vulture, owl, crow, or falcon—death; like a noose or headless trunk—death of the king. If blood flows when cut, danger to men arises. If black, yellow, dry, or foul-smelling, it is inauspicious. ॥21–25॥

For Seats and Beds Alike—
If the tusk's section is white, smooth, fragrant, and spotless, it is auspicious. These are equally applicable to seats and beds. ॥26॥

Joining of the Wooden Parts—
In constructing the bed frame, join the planks in right-hand (*dakṣiṇa-pradakṣiṇa*) order: fix the root of the southern plank to the head-end, its front to the root of the foot-end plank, and so on in sequence. This is auspicious. The reverse order causes fear from spirits. ॥27॥

Legs of the Bed—
If one leg is inverted (root and tip reversed), the sleeper suffers foot pain; if two, indigestion; if three or four, misery, bondage, and captivity. ॥28॥ If a leg's head is perforated, discolored, or knotted, the sleeper falls ill. A knot at the joint above the foot causes abdominal disease; at the lower thigh, leg ailments; at the base, loss of wealth; at the hoof region, harm to hoofed animals; knots on one-third of the side or head planks are also inauspicious. ॥29–31॥

Names of Various Holes—
Nishkuṭa, *Kolākṣa*, *Sūkaranayana*, *Vatsanābha*, *Kālaka*, and *Dhundhuka* are the six names of structural holes. ॥32॥

Characteristics of Holes—
A hole wide in the middle and narrow above like a jar is *Nishkuṭa*; dark-blue and grain-sized holes are also *Nishkuṭa*; uneven, discolored, one-and-a-half joint long holes are *Sūkaranayana*; one-joint-long and leftward-turning are *Vatsanābha*; black are *Kālaka*; visible from both sides are *Dhundhuka*. Holes matching the wood's own color are not especially inauspicious. ॥33–35॥

निष्कुट आदि छिद्रों का फल **(Results of Various Holes in the Wood)**

If the hole called *Niṣkuṭa* is present, it causes loss of wealth. The hole called *Kolākṣa* causes destruction of the family. The hole called *Sūkaranayana* brings fear from weapons, and the hole called *Vatsanābha* causes disease. If the holes called *Kālaka* and *Dhundhuka* are worm-eaten,

they are inauspicious. Likewise, any wood with too many knots is never auspicious anywhere—wood full of knots is inauspicious for all uses. ॥36–37॥

Result of Mixed Wood (Miśrita Kāṣṭha Phala)
A bed made of the wood of one tree brings prosperity; one made of two kinds of wood brings greater wealth; one made of three kinds of wood promotes the birth of sons; and one made of four kinds of wood grants great wealth and fame. But a bed made of five kinds of wood brings death to the sleeper, and those made of six, seven, or eight kinds destroy the entire family. ॥38–39॥

Chapter – 80

अथ रत्नपरीक्षाध्यायः **(Adhyāya on the Examination of Gems)**

Purpose of Gem Examination—
Auspicious gems bring good fortune to kings, while inauspicious ones bring misfortune. Therefore, the quality and destiny (*daiva*) of gems should always be examined by experts. ॥1॥

Definition of "Ratna"—
The term *Ratna* ("jewel") is used for the best among elephants, horses, and women—such as *Gaja-ratna* (noble elephant), *Aśva-ratna* (excellent horse), and *Strī-ratna* (virtuous woman). But here the term refers specifically to mineral gems such as diamonds and other precious stones. ॥2॥

Different Theories of Gem Origin—
Some say gems originated from the demon *Bala*; others claim they formed from the bones of Sage Dadhīci; some believe they arise naturally from the earth as stones that develop brilliance through its inherent qualities.

Names of the Gems—
Diamond (*Vajra*), Sapphire (*Indranīla*), Emerald (*Marakata*), Karketara, Padmarāga (Ruby), Rudhira, Vaidurya (Cat's-eye), Pulaka, Vimalaka, Rājamaṇi, Sphaṭika (Crystal), Candrakānta, Saugandhika, Gomeda, Śaṅkha, Mahānīla, Pukhraj (Yellow Sapphire), Brahmamaṇi, Jyotīrasa, Saśyaka, Muktā (Pearl), and Mūnga (Coral)—these are all called *Ratna* (gems). ॥4–5॥

Seven Sources of Diamonds—
Pure diamonds are found on the banks of the Veṇā River; in the land of Kośala they are pale like *Śirīṣa* flowers; in Saurāṣṭra, slightly red; in Sūrapāraka, black; in the Himalayas, reddish; in Mataṅga, the color of the *Vallī* flower; in Kaliṅga, yellow; and in Pauṇḍra, dark-colored. ॥6–7॥

Presiding Deities of Diamonds—
The six-faced white diamond is ruled by Indra; the black, serpent-faced one by Yama; the bluish-yellow (plantain-hued) diamond by Viṣṇu; generally, all diamonds are governed by Viṣṇu. A diamond shaped like a woman's vulva belongs to Varuṇa; that resembling the *Karṇikāra*

flower, the water-nut, or a tiger's eye belongs to Agni; and that colored like the *Aśoka* blossom belongs to Vāyu. The sources of diamond origin are three: riverbeds, mines, and deposits in the earth. ॥8–10॥

Auspicious Colors by Caste—
Red and yellow diamonds suit Kṣatriyas; white ones suit Brāhmaṇas; *Śirīṣa*-colored suit Vaiśyas; and blue ones suit Śūdras. ॥11॥

Determining the Value of Diamonds—
Eight white mustard seeds equal one grain of rice (*taṇḍula*). A diamond weighing twenty grains is worth two lakhs of *kārṣāpaṇas*. Reducing the weight by two grains successively reduces the value as follows:
18 grains — ₹150,000;
16 grains — ₹144,443;
14 grains — ₹100,000;
12 grains — ₹66,663;
10 grains — ₹40,000;
6 grains — ₹12,500;
4 grains — ₹8,000;
2 grains — ₹2,000;
1 grain — ₹200.
Thus, diamond prices decrease proportionally with weight. ॥12–13॥

Marks of an Auspicious Diamond—
A diamond that cannot be broken by any substance, floats on water like a spark even in shallow liquid, is clear, and shines like lightning, fire, or a rainbow, is auspicious and brings prosperity. ॥14॥

Marks of an Inauspicious Diamond—
Those marked like a crow's foot or a fly, streaked like hair, mixed with metallic or earthy veins, pierced by pebbles, doubled in angles, burnt by fire, dull, or lacklustre are all inauspicious. ॥15॥

Further Inauspicious Signs—
If a diamond is cracked in front like a water-bubble, flat, or long like an overripe fruit, it is unlucky. Such defective diamonds are valued at one-eighth less than the standard value. ॥16॥

Effects of Wearing Diamonds—
Learned gem experts declare that women desiring sons should not wear any diamond except those shaped like a water-nut, triple-faced, or grain-like, which are auspicious.

Wearing a diamond marked by inauspicious features causes loss of wealth, kin, and life for kings; but wearing a flawless one removes fear from weapons, poison, and enemies, and increases pleasures and prosperity. ॥18॥

Chapter – 81

अथ मुक्तालक्षणाध्यायः **(Adhyāya on the Characteristics of Pearls)**

Origins of Pearls—
Pearls originate from elephants, serpents, oysters, conches, clouds, bamboo, fish, and boars. Of these, those born in oysters are the best. ॥1॥

Eight Sources of Pearls—
The lands of Siṁhala, Paraloka, Saurāṣṭra, the river Tāmraparṇī, Pārśva, Kaubera, Pāṇḍya, and the Himalayas are the eight regions from which pearls arise. ॥2॥

Characteristics of Pearls—
In Siṁhala, pearls are many-shaped, smooth, large, and swan-white. In the Tāmraparṇī river, they are reddish-white and clear. In Paraloka, black, white, yellow, and mixed with pebbles. In Saurāṣṭra, neither too large nor too small, lustrous like butter. In Pārśva, bright, white, heavy, and full of virtues. In the Himalayas, small, fragile, shining like curd, large and excellently shaped. In Kaubera, mixed, black, white, light, and radiant. In Pāṇḍya, resembling a *nimb* fruit, triple-layered, small, and very fine. ॥3–6॥

Deities of Pearls—
Blue pearls like linseed flowers belong to Viṣṇu; white as the moon belong to Indra; yellow as *Haritāla* to Varuṇa; black to Yama; red like pomegranate seeds to Vāyu; and smokeless or lotus-hued to Agni. ॥7–8॥

Values of Pearls—
A lustrous pearl weighing four *māṣas* is worth 5,300 *kārṣāpaṇas*. Decreasing by half a *māṣa* each step reduces the value:
3½ *māṣas* — 3,200;
3 *māṣas* — 2,000;
2½ *māṣas* — 1,300;
2 *māṣas* — 800;
1½ *māṣas* — 353.
A one-*māṣa* pearl is worth 135; one of five *guñjās* (berry-weight) is 90; 3½ *guñjās* — 70; 3 *guñjās* — 50; 2½ *guñjās* — 35 *kārṣāpaṇas*. ॥9–12॥

Other Valuation Method—
If thirteen pearls weigh one *dharaṇa* (tenth of a *pala*), they are worth 200 rupees; if twenty pearls, 130 rupees; thirty, 70 rupees; forty, 50 rupees; forty-five, 40 rupees; eighty, 30 rupees; one hundred, 25 rupees; two hundred, 12 rupees; three hundred, 6 rupees; four hundred, 5 rupees; five hundred, 3 rupees. ॥13–16॥

Terminology by Number—
Thirteen pearls per *dharaṇa* are called *Pika*; sixteen, *Picchā*; twenty-five, *Ardha*; thirty, *Khaka*; forty, *Siktha*; fifty-five, *Nigara*; eighty to five hundred are termed *Cūrṇa* (powder type). ॥17॥

Graduation of Value—
The above rates are for first-quality pearls; intermediate grades should be calculated proportionally. Pearls that are mixed-colored—black, white, yellow, red, or uneven—are worth one-third less; spotted or yellow ones are worth one-sixth less. ॥18–19॥

Elephant Pearls (Gaja-muktā)—
From noble elephants born in the *Airāvata* line, under Puṣya or Śravaṇa constellations, during northern solstice, or under solar or lunar eclipse, arise large, radiant pearls in the tusk cavities. They should not be pierced. Wearing such glowing pearls grants kings sons, victory, and health. ॥20–22॥

Boar and Fish Pearls—
Pearls formed in the roots of boar tusks are lustrous like the moon and full of virtues. Those from fish resemble fish-eyes, large, pure, and excellent. ॥23॥

Cloud Pearls—
Pearls falling from the sky during rainfall, glowing like lightning and descending with storm from the seventh atmospheric layer, are snatched away by celestial beings before they reach earth. ॥24॥

Serpent Pearls (Nāga-muktā)
Among serpents of the Takṣaka and Vāsuki races, some bear shining, blue-tinted pearls on their hoods. To test them, place the pearl on pure ground in a silver vessel—if rain falls suddenly, it is a serpent-born pearl. ॥25–26॥ Wearing a naturally obtained serpent pearl brings the king freedom from poison and misfortune, inspires fear in enemies, spreads fame, and ensures victory. ॥27॥

Bamboo and Conch Pearls—
Bamboo pearls are flat, uneven, and glossy like camphor or crystal. Conch pearls are round, bright, and lustrous like the moon. ॥28॥

Invaluable Pearls—
Pearls from conch, fish, bamboo, elephant, boar, serpent, and cloud should not be pierced. Their worth cannot be measured—they are priceless due to extraordinary powers. ॥29॥

Fruits of Wearing Pearls—
All these high-quality pearls bestow sons, wealth, fortune, fame, remove disease and sorrow, and fulfill all desires. ॥30॥

Names of Pearl Ornaments—
A garland of 1,008 strings, four arms long, is called *Inducchanda* (fit for gods). One of 504 strings, two arms long, is *Vijayacchanda*. Garlands of 108 or 81 strings are *Devacchanda*. Sixty-four strings make *Ardha-hāra*; fifty-four, *Raśmikalāpa*; thirty-two, *Gucccha*; twenty, *Ardha-gucccha*; sixteen, *Māṇavaka*; twelve, *Ardha-māṇavaka*; eight, *Mandara*; five, *Phalaka*. A necklace one cubit long with twenty-seven pearls is *Nakṣatra-mālā*. If a gem or gold bead is

strung at the center, it is called *Maṇi-sopāna* or *Chāṭukāra*. A plain pearl string of one cubit without a central gem is *Ekāvali*; with one, *Yaṣṭi*. ॥31–36॥

Chapter – 82

अथ पद्मरागलक्षणाध्यायः **(Adhyāya on the Ruby – Padmarāga)**

Origin of Padmarāga Stones—
Padmarāgas (rubies) originate from three stones: *Saugandhika*, *Kuruvinda*, and *Sphaṭika* (crystal). Those from *Saugandhika* are lustrous like bumblebees, collyrium, clouds, or the juice of the jamun fruit; those from *Kuruvinda* are variegated black and white, dull in luster, and mixed with metallic veins; those from *Sphaṭika* are bright, multicolored, and pure. ॥1–2॥

Qualities of Padmarāga—
Smooth, shining, clear, heavy, of graceful form, bright in the center, intensely red, and endowed with all excellent virtues—these are the chief qualities of the ruby. ॥3॥

Defects of the Stone—
Those that are dull, lack brilliance, veined, mixed with metals, cracked, holed, rough, or containing gravel are defective. ॥4॥

Serpent Jewel (Nāga-maṇi)—
The priceless gem found on the serpent's hood glows like the neck of a peacock or the hue of a bee and shines like a flame. ॥5॥

Effects of Wearing Gems—
A king who wears such gems never suffers from poison or disease; his land receives abundant rain by Indra's favor, and through the gem's power he destroys his enemies. ॥6॥

Valuation of Padmarāga—
A ruby weighing one *pala* is worth ₹26,000; three *karṣas*, ₹20,000; half a *pala*, ₹12,000; one *karṣa*, ₹6,000; eight *māṣas*, ₹3,000; four *māṣas*, ₹1,000; two *māṣas*, ₹500. Intermediate grades are valued according to brilliance and purity. Those of lesser color are worth half; those lacking radiance, one-eighth; slightly impure ones, one-twentieth; smoky, holed, or faint rubies, one-hundredth of the value. Thus have the ancient teachers defined the correct valuation of rubies. ॥7–11॥

Chapter – 83

अथ मरकतलक्षणाध्यायः **(Adhyāya on the Emerald – Marakata)**

Purpose and Characteristics of the Emerald—
The *Marakata* (emerald), shining like the parrot's plumage, the bamboo leaf, the banana plant, or the *Śirīṣa* flower, brings great auspiciousness when worn during sacred rites devoted to gods or ancestors. ॥1॥

Chapter – 84

अथ दीपलक्षणाध्यायः **(Adhyāya on the Characteristics of Lamps)**

Inauspicious Signs and Results of a Lamp—
A lamp whose flame revolves counterclockwise, whose rays are dim or smoky, from which sparks emerge, whose flame is small, or which—though filled with pure oil and a well-made wick—gets extinguished quickly, produces noise, trembles, scatters its rays, or goes out without the presence of wind or moths, is considered inauspicious and brings sinful results. ॥1॥

Auspicious Signs of a Lamp—
A lamp with a united flame, tall form, steady and silent glow, radiance without flicker, turning clockwise in motion, and shining like *Vaidurya* (cat's-eye gem) or gold, and which burns continuously for a long time, indicates the swift arrival of great prosperity. The remaining marks of fire described elsewhere should also be understood here as applicable. ॥2॥

Chapter – 85

अथ दन्तकाष्ठलक्षणाध्यायः **(Adhyāya on the Characteristics of Tooth-Cleansing Sticks)**

Introduction—
Among vines, creepers, shrubs, and trees, there exist thousands of kinds of tooth-cleaning twigs (*dantakaṣṭha*). Of these, only those that grant desired results will be explained briefly. ॥1॥

Prohibited Types of Tooth-Cleansing Sticks—
One should not use twigs that have unfamiliar leaves, are double-jointed, broken, dried while still on the tree, or are without bark. ॥2॥

Results of Using Various Trees for Tooth-Cleansing—
Using twigs from *Vaikaṅkata*, coconut, and *Kāśmarī* (Gambhārī) trees brings the merit of divine speech (*Brāhmī dhuti*). Using *Kṣema* wood grants an excellent wife. From *Vaṭa* (banyan) comes wealth, from *Āka* great energy, from *Arjuna* popularity, and from *Khadira* the blessing of sons. ॥3॥

Using *Śirīṣa* or *Karañja* wood grants prosperity, from *Pākara* (Ficus infectoria) brings fulfillment of desires, from *Chameli* (jasmine) brings honor, and from *Pippala* (peepal) grants leadership and prominence. ॥4॥

Using twigs of *Ber* and *Kaṭerī* brings health and long life; *Khair* and *Bel* grant wealth and opulence; *Tendu* and *Kadamba* bring desired possessions. ॥5॥

Using *Nimba* (neem) wood brings money; *Karavīra* (oleander) grants food; *Bhāṇḍīra* brings abundant food; *Śamī* destroys enemies; *Arjuna* does the same; and *Śyāmā* tree wood too helps in vanquishing foes. ॥6॥

Using twigs of *Śāla* and *Aśvakarṇa* enhances respect and honor; *Deodāru* and *Vāsikā* also bring respect; and twigs from *Priyaṅgu*, *Apāmārga*, *Jāmun*, and *Dāḍima* (pomegranate) trees bring popularity and affection from all sides. ॥7॥

Method of Brushing Teeth—
One should sit comfortably facing east or north, hold a sacred desire in the heart, and use the prescribed twig. After use, it should be washed and placed respectfully in a clean spot. ॥8॥

Results According to the Direction in Which the Twig Falls—
If the discarded twig falls in the direction of the one's mouth while eating, it is auspicious. If it stands upright, it is highly auspicious; if it falls opposite to the eating direction, it is inauspicious. If it stands erect while falling, it foretells the gain of sweet foods. ॥9॥

Chapter – 86

अथ शाकुनाध्यायः **(Adhyāya on Omens – Śakuna)**

Introduction—
Having studied the views of Śukra, Indra, Bṛhaspati, Kapisthala Muni, Garuḍa, Bhāguri, and Devala, as well as the doctrines of Bhāradvāja and the teachings of the seven Ṛṣis in Sanskrit and Prakrit, Sage Varāhamihira compiled the *Śakuna Saṁgraha* (collection on omens) to enlighten his disciples. ॥1–5॥

Purpose of Omens—
The omens perceived in one's journey or actions reveal the auspicious and inauspicious effects of past deeds. ॥5॥

Classification of Omens—
Omens arise from beings living in villages, forests, waters, the earth, and the sky, and from those that are diurnal, nocturnal, or amphibious. Their sounds, movements, gazes, and actions should be interpreted to understand whether they signify male, female, or neutral energies. ॥6॥

General Signs—
Due to species variation and conditions, gender distinctions may not always be clear. Therefore, sages have defined two verses to classify them. ‖7‖

Male, Female, and Neuter Omens—
Beings with thick necks and shoulders, broad chests, low deep voices, and steady strength are *male omens*. Those with thin necks and shoulders, small faces, feet, and gentle voices are *female omens*. Mixed traits denote *neuter omens*. ‖8–9‖

How to Interpret Common Omens—
Omens from domestic, wild, and amphibious creatures should be interpreted by their natural behavior and societal norms. For brevity, only those relevant to journeys are explained. ‖10‖

How Omen Results Apply—
An omen applies to the traveler himself, to a king within an army, to a deity within a town, to a leader among people, to a chief among chiefs, to a caste among castes, and to the eldest among the learned. ‖11‖

Determination of Directions—
From sunrise to the first watch, the east is divided into three phases: *Muktasūrya*, *Prāptasūrya*, and *Aishyatsūrya*, each representing progressive stages of light and fortune. Directions are classified as fiery (*Aṅgāriṇī*), bright (*Dīptā*), smoky (*Dhūminī*), or calm (*Śāntā*), each affecting the timing of omen results—past, present, or future. ‖12–13‖

Timing of Omen Effects—
Omens seen nearby or on low ground take effect quickly; those far away or on high ground take effect slowly. Omens seen in ascending places yield increasing results; those in descending ones yield decline. ‖14‖

Ten Types of Brilliant Omens—
Omens seen in fierce constellations are *Kṣaṇa-dīpta*; during inauspicious lunar days (4th, 6th, 8th, 9th, 14th) are *Tithi-dīpta*; in fierce stars (*Mūla*, *Ārdrā*, *Āśleṣā*, *Pūrvā*, *Bharanī*, *Maghā*) are *Nakṣatra-dīpta*; during violent winds are *Vāyu-dīpta*; those facing the sun are *Sūrya-dīpta*. These are divine omens; others, defined by movement, place, voice, and action, are *Kriyā-dīpta*. ‖15–16‖

Gentle and Fierce Omens—
Omens of creatures eating grass or fruits are *Saumya* (gentle), those feeding on flesh or filth are *Raudra* (fierce), and those eating grains are *Miśra* (neutral). ‖17‖

Strength of Omens—
Diurnal creatures in day, nocturnal in night, and amphibious beings in water regions are strong. Female omens are weaker than male ones. ‖18–19‖

Regional Strength Examples—
Cocks, elephants, peacocks, lions, and certain birds are strong in the east; jackals, owls,

parrots, crows, and wolves in the south; cows, hares, swans, and foxes in the west; and deer, horses, cuckoos, mice, and bells in the north. ॥20–23॥

Omens Not to Be Interpreted—
Omens of wild animals within villages, or domestic ones in forests, as well as night omens by day and vice versa, should not be considered. ॥24॥

Invalid Omens—
Those that are sick, frightened, quarrelsome, craving meat, across rivers, or out of season are ineffective. ॥25–27॥

Division of Directions—
Each of the eight directions—east, south, west, north, and their intercardinal quarters—is further divided into three regions representing various beings or professions (like ascetics, traders, elephants, and craftsmen). Thus there are thirty-two directional sectors, each with distinct omens and rulers. ॥29–33॥

Sound Omens—
Rough, frightening, or broken sounds are inauspicious; gentle, melodious, and joyful sounds are auspicious. ॥36॥

Auspicious Left-Side Omens—
For travelers, seeing or hearing jackals, owls, shrews, pigs, or cuckoos on the left side is auspicious. ॥37॥

Auspicious Right-Side Omens—
Birds like hawks, monkeys, falcons, and others on the right side are auspicious. ॥38॥

Interpretation of Sides and Sounds—
Sounds like sneezing, handclaps, conch, sacred chant, and running water are auspicious when heard on the left; other melodious sounds on the right. ॥39–40॥

Other Good and Bad Omens—
Seeing or hearing the names of *Bhāradvāja*, goats, or peacocks is auspicious; seeing a mongoose, crow, or lizard ahead is inauspicious. However, hearing the names of serpents, rabbits, pigs, or monitor lizards before travel is favorable. ॥41–42॥

Further Rules—
Odd-numbered groups of animals (1, 3, 5, etc.) crossing from left to right are lucky; from right to left, unlucky—except when involving certain birds like *Chāṣa*. ॥43–44॥

Directional Omens—
In the east, horses and white objects are auspicious; in the south, corpses and meat; in the west, maidens and curds; in the north, cows, Brāhmaṇas, and noble men. Conversely, traps in the east, weapons in the south, intoxication in the west, and plows in the north are inauspicious. ॥45–47॥

Special Rules for Women—
All omens described for men should be interpreted in the reverse for women. ॥48–49॥

Concluding Note—
When omens appear on both sides equally (*Parigha* omen), destruction of the traveler is indicated. But if each side's omens remain in their proper places and produce calm sounds, it is the *Dvāra-śakuna*—a sign that all desired undertakings will succeed. ॥51–52॥

मातान्तर से शकुनद्वार का लक्षण **(The Nature of the "Śakuna-Dvāra" According to Other Traditions)**

According to another opinion, when omens of the same species stand calmly on both sides of the traveler and produce sound without agitation, that is called the **Śakuna-Dvāra** (the omen of the "two gates"), which is auspicious and indicates successful completion of the desired task.
(Here speaks Sage Nandi.)

Virodha-Saṁjñaka Śakuna (Conflicting Omens)
If, at the time of journey, one omen seems to permit travel while another forbids it, such an omen is called *Virodha-Saṁjñaka* (conflicting omen) and gives inauspicious results. However, between the two, the omen that is stronger in power should be accepted. ॥54॥

Result of Conflicting Omens
If, during a journey, a *Praveśa-kālika* omen (sign occurring at the time of arrival) appears first and a *Yātrā-kālika* omen (journey omen) appears afterward, it indicates the successful accomplishment of the purpose. Conversely, during a house-entry or similar event, if the journey omen occurs first and the entry omen afterward, it too gives success. ॥55॥

If an omen first gives auspicious signs and then forbids the journey, it portends death of the traveler at the hands of an enemy, conflict involving weapons, or disease. ॥56॥

If a shining (dīpta) omen appears on the left side while facing a bright direction, it indicates danger; and if such a bright omen appears at the very beginning of the work, fear or misfortune persists for a full year. ॥57॥

Results of Intensified Omens (Dīpta Śakuna)
When the brilliance (*dīpti*) arises from:
– *Tithi (lunar day)* — it indicates danger to wealth;
– *Vāyu (wind)* — danger to army;
– *Nakṣatra (star)* — danger to strength;
– *Sūrya (sun)* — danger to body;
– *Sthāna (place)* — danger to beloved ones;
– *Cestā (action)* — danger to undertakings. ॥58॥

From Thunder or Cloud-Sound Omens
When an omen coincides with the sound of thunderclouds, it denotes fear arising from storms or wind; when occurring during twilight (both dawn and dusk), it indicates danger from weapons. ॥59॥

Omens Seated on Inauspicious Places
If omens sit on funeral pyres, hair, or skulls, they foretell death, imprisonment, and execution respectively. Sitting on thorny trees brings quarrels; on wood, disturbances; on ashes, sorrow. If perched upon hollow or empty things, they signify failure in undertakings; if on stones, they foretell fear. Such are the results of fiery omens, while calm omens (*śānta śakuna*) yield much milder effects. ॥60–61॥

Omens While Eating or Excreting
Omens seen excreting portend failure, while those eating indicate success. If they fly away after calling, it signifies departure of someone; if they return to their place, it indicates arrival of a person. ॥62॥

Results of Sound and Movement
An omen making loud sound at first and then soft indicates blame or trouble. A *Svara-dīpta* (voice-intensified) omen brings disputes; a *Sthāna-dīpta* (place-intensified) omen causes enmity. ॥63॥

Omens Crying Continuously for Days
If an omen keeps calling from one place—
for **7 days**, it foretells the destruction of a village;
for **2 months**, the destruction of a town;
for **3 months**, the destruction of a country;
for **a full year**, the death of a king. ॥64॥

Famine-Producing Omens
If any creature, except snakes, mice, cats, or fish, devours the flesh of its own kind, it foretells famine. ॥65॥

Inter-Species Copulation
Except for hybrid creation such as the mule (born of horse and donkey) or unnatural human unions, if any bird or beast mates with another species, it foretells destruction of the land. ॥66॥

Omens Near the Body
If a bird or creature passes near one's feet, it indicates bondage; near the thighs, death; near the head, fear. If feeding on grass, it causes distress; if drinking water, it foretells rain; if eating flesh, it suggests injury; if eating grain, it means reunion with relatives. ॥67॥

Indications of Arrivals Through Omens
An omen in a bright (*dīpta*) direction indicates the arrival of a fierce man; in a smoky (*dhūmita*) direction, a person bearing punishment; in a calm (*śānta*) direction, a flawed man; next comes

the arrival of a wicked one, then a nobleman, then a king, then a merchant, and finally, if in the fiery (*aṅgārita*) direction, arrival of a man after long delay. ‖68‖

Omens Associated with Food or Offerings

If a strong omen appears near eatables on any day, it signifies gain of that food item. Even if an otherwise auspicious omen appears bright yet looking downward, it portends a dreadful event. ‖69‖

Oblique-Directional Omens (Vidiśā)

If a bright omen seen in an oblique direction (like southeast or northwest) calls out with another omen on the left, it indicates the union of a woman with the man of that direction. ‖70‖

Relation of Calm and Bright Omens

If a calm omen makes sound due to a bright omen situated five directions away, it indicates the arrival of a person from that direction. If reversed (a bright omen calling due to a calm one), it indicates misfortune. ‖71‖

Central or Intermediate Omens

If a central omen calls together with a left-side omen, it indicates fear from relatives; if with a right-side omen, fear from enemies. If both sound simultaneously and equally, death is portended. ‖72‖

Omens on Trees or Objects

If perched atop a tree, the omen indicates arrival of an elephant-rider; if midway, a horseman; if at the base, a charioteer. If sitting on a tall object, a pedestrian arrives; on a lotus, one by boat; on a broken branch, a person in a palanquin. ‖73‖

Omens on Hills or Elevated Spots

If seated on a hill, a cart-borne person comes; if in shade, a man bearing an umbrella. Omens in the east, south, west, and north yield results within one, three, five, and seven days respectively; in the intermediate directions—southeast, southwest, northwest, northeast—also in one, three, five, and seven days accordingly. ‖74‖

Deities of the Eight Directions

Indra, Agni, Yama, Rākṣasa, Varuṇa, Vāyu, Candra, and Śiva preside respectively over the east and the succeeding seven directions. The main directions are masculine; the intercardinal (oblique) ones are feminine. ‖75‖

Place of Written Omen (Lekha)

When a writing or inscription (*lekha*) is mentioned in earlier verses, its medium varies by direction:

– East: bark or leaf of a tree
– Southeast: palm leaf
– South: torn leaf
– Southwest: cloth
– West: lotus leaf

– Northwest: stem
– North: leather
– Northeast: wooden board.
All these correspond to the thirty-twofold division of the directional wheel (*dik-cakra*). ॥76॥

Regions Where Omen's Results Occur
An omen in the east gives results in battles; in southeast, near fire; in south, in noisy places; in southwest, in wars; in west, near water; in northwest, in prisons; in north, in sacred Vedic places; in northeast, among cows.
Colors associated: East—red, South—yellow, West—black, North—white; in the diagonals—mixed hues: southeast—red-yellow, southwest—yellow-black, northwest—black-white, northeast—white-red. ॥77॥

Other Locational Indications
If in the east—place marked with flags; southeast—burnt by fire; south—cremation ground; southwest—cave; west—near water; northwest—on mountains; north—in caves. For auspicious omens, the events happen in such sacred spots; for inauspicious ones, in perilous places. ॥78॥

Personifications of Directions
In the east lives a beautiful maiden; southeast, a crippled or foul woman; south, a disfigured one; southwest, a foul-smelling one; west, dressed in blue; northwest, despicable; north, tall; northeast, a widow. Some authorities reverse this for interpretive symbolism, associating the same with theft or misfortune depending on omen quality. ॥79॥

Omens in Question-Time (Praśna Kāla)
If the questioner or omen is in the east—silver; southeast—gold; south—distress; southwest—woman; west—goat; northwest—vehicle; north—sacrifice; northeast—cow-related.
Trees corresponding: East—banyan; southeast—red wood; south—lodh; southwest—perforated bamboo; west—mango; northwest—khair; north—bel; northeast—arjuna.
Auspicious omens in these directions bring gains of the corresponding objects; inauspicious ones, loss. ॥80॥

Chapter – 87

अथ अन्तरचक्राध्यायः **(Adhyāya on the Inner Circle of Omens)**

Results of Omens in the Inner Thirty-Two Divisions of the Directional Circle (Dik-cakra)
If an omen cries from the east, it foretells the approach of the king's servant bringing worship offerings, and attainment of gems and jewels. If auspicious, the results are good; if moderate, moderate; if inauspicious, only minor benefit. ॥1॥

In the second division (moving clockwise) — gain of gold and fulfillment of desires.
In the third — acquisition of weapons, wealth, and betel nuts. ॥2॥

In the fourth — meeting with a pure Brāhmaṇa or fire-worshipper.
In the southeast — gain of gold and iron objects, and meeting with a beggar. ॥3॥

In the first southern part — sight of a prince, success in undertakings, and gain of desired objects.
In the second southern — acquisition of a wife, merit, mustard, and barley. ॥4॥

From the southeast's fourth division — recovery of lost property, fulfillment of journey results. ॥5॥

In the southern division — success in travel and acquisition of peacocks, buffaloes, and cocks.
In its second — meeting with performers (actors, dancers) and gains of auspicious objects and virtue. ॥6॥

In the third — success in work, association with boatmen, and gain of fish and partridges.
In the fourth — sight of a monk and gain of cooked food and fruits. ॥7॥

In the southwest — gain of ghee, horses, ornaments, messengers, and letters.
In its second — meeting with a leather-worker and gain of leather goods. ॥8॥

In the third — sight of monkeys, mendicants, or Buddhist monks.
In the fourth — gain of fruits, flowers, and ivory objects. ॥9॥

In the west — gain of ocean-born gems, cat's-eye, and jewel vessels.
In its second — meeting with hunters or thieves and gain of meat. ॥10॥

In the third — seeing diseased persons and gain of sandalwood or agarwood.
In the fourth — meeting with scholars and gain of scriptures and books. ॥11॥

In the northwest — gain of sea foam, chowries, woolen cloths, and meeting with writers or clerks.
In its second — gain of earthen vessels, association with naked ascetics, and beating of drums. ॥12॥

In the third — reunion with a friend and gain of wealth.
In the fourth — gain of clothes and horses and meeting with dear ones. ॥13॥

In the north — gain of curd, rice, and popped grains, and sight of Brāhmaṇas.
In its second — gain of wealth and meeting with merchants. ॥14॥

In the third — meeting with courtesans, Brāhmaṇas, or servants, and gain of white flowers.
In the fourth — meeting with a painter and gain of decorated garments. ॥15॥

In the northeast — meeting with a priest and gain of grains, jewels, and cattle.
In its second (eastern next) — gain of garments and meeting with a courtesan. ॥16॥

In the third — meeting with a washerman and gain of water-borne goods.
In the fourth — association with elephant keepers and gain of elephants and wealth. ॥17॥

Special Rule
As in *Vāstu-śāstra*, this thirty-twofold *dik-cakra* has spokes (*nemis*), rims (*aras*), and hubs (*nābhi*). Between the hub and rim are nine possible divisions through which omens yield fruits. ॥18॥

Omens Between Hub and Rim (Aras)
If in the *nābhi* (center), it signifies meeting with friends and satisfaction.
In the eastern *ara* — gain of red garments and contact with kings. ॥19॥

In the southeastern — association with weavers, carpenters, artisans, mathematicians, or horse trainers and gain of their products or horses. ॥20॥

In the southern — contact with pious men and gain of religious merit. ॥21॥

In the southwestern — meeting with herdsmen, players, or *Kāpālikas*, gain of bulls, and meals of pulses like *urad* and *kulthi*. ॥22॥

In the western — association with farmers and gain of marine products, shells, fruits, or wine. ॥23॥

In the northwestern — meeting with porters, carpenters, or beggars, and gain of *nāga* and *puṇṇāga* flowers. ॥24॥

In the northern — gain of wealth and meeting with Vaiṣṇavas, Brāhmaṇas, or men in yellow garments. ॥25॥

In the northeastern — sight of a pious woman and gain of black iron, weapons, or bells. ॥26॥

Further Rules
If calm omens are present in the 8th of the south, 2nd, 6th, 3rd, 7th, and 8th of the west, and 2nd of the north, they indicate journeys of moderate fruit. In the remaining 25 divisions, the journey is fruitful.
If omens appear in all *aras* except northwest and southwest, the result is auspicious; in those two, it brings distress. ॥27–28॥

Fiery (Dīpta) Eastern Omens
If a bright omen appears in the east, it indicates fear from the king and contact with enemies. ॥29॥

Results of Fiery (Dīpta) Omens in the Eastern and Other Directions

Eastern Direction – Second and Third Divisions
If a *Dīpta Śakuna* (fiery omen) appears in the **second division** of the eastern direction, it causes loss of gold and brings fear to goldsmiths.
If it appears in the **third division**, it brings loss of wealth, quarrels, and danger from weapons. ॥30॥

Eastern Direction – Fourth Division
If the fiery omen is situated in the **fourth division** of the east (the southeastern angle), it indicates fear from fire and thieves.
If it is in the **second division from the southeast**, it causes loss of wealth and death of a prince. ॥31॥

Southeast – Third and Fourth Divisions
If a fiery omen occurs in the **third division** from the southeast, it brings destruction of a woman's pregnancy.
If in the **fourth division**, it causes the death of goldsmiths and painters, and the rise of weapon-related calamities. ॥32॥

Southeast – Fifth and Sixth Divisions
If in the **fifth division** from the southeast, it indicates fear from kings and the sight of corpses.
If in the **sixth division**, it foretells fear from *ḍoma* (outcastes) and celestial beings (*gandharvas*). ॥33॥

Southeast – Seventh and Eighth Divisions
If a fiery omen appears in the **seventh division** from the southeast, it causes fear from fishermen and bird-hunters.
If in the **eighth division**, it causes loss of food and fear from naked ascetics. ॥34॥

Southwest and Western First Division
If a fiery omen is in the **southwest**, it causes bloodshed and fire calamities.
If in the **first division** of the west, it brings loss of leather goods and fear from cobblers. ॥35॥

West – Second, Third, Fourth, and Fifth Divisions
If in the **second division** of the west, there is fear from ascetics and Buddhist monks;
In the **third division**, fear of fasting;
In the **fourth (exact west)**, fear from rain;
And in the **fifth division**, fear from dogs and thieves. ॥36॥

West – Sixth to Ninth Divisions
If in the **sixth division**, it indicates destruction of those suffering from rheumatism;
In the **seventh**, death of those living by weapon or scripture;
In the **northwest**, destruction of learning and sacred texts;
And in the **second division from the northwest**, fear from poison, thieves, and wind. ‖37‖

Northwest – Third and Fourth Divisions
If in the **third division** from the northwest, it causes loss of wealth and quarrel with friends.
If in the **fourth**, it causes the death of horses and brings danger to priests. ‖38‖

North – First, Second, and Third Divisions
If a fiery omen is seen in the **northern direction**, it causes theft of cows and loss of weapons.
If in the **second division**, it causes the ruin of merchants and loss of wealth.
If in the **third division**, it brings danger to the uninitiated (*vrātya*), servants, and courtesans. ‖39‖

Near Northeast and Northeast Proper
If near the **northeast** (the fourth part from north), it brings fear to artists and painters.
If exactly in the **northeast**, it brings danger from fire and faults even in virtuous women. ‖40‖

Northeast – Second and Third Divisions
If near the northeast (in the second part), it brings sorrow and destruction of women.
If in the **third division**, it causes fear from washermen and celestial beings (*gandharvas*). ‖41‖

End of the Directional Circle
If a fiery omen appears at the **end of the directional circle**, it brings fear from elephant-riders and death of elephants.
If a fiery omen is in the **inner eastern spoke (ara)** of the circle, it indicates certain death of a woman. ‖42‖

Fiery Omens in the Inner Spokes (Aras)
If in the **southeastern spoke**, it indicates calamity from fire and weapons, destruction of horses, and fear from artisans.
If in the **southern spoke**, it causes loss of religion (*dharma*).
If in the **southwestern spoke**, it brings death by fire, fall from heights, or destruction by wicked men.
If in the **western spoke**, fear arises for artisans.
If in the **northwestern spoke**, death of donkeys and camels occurs, and men suffer from cholera and poison.
If in the **northern spoke**, there is distress to wealth and Brāhmaṇas.
If in the **northeastern spoke**, there is mental agony, suffering from villagers and cowherds.
If the fiery omen is in the **navel (center)** of the circle, it signifies one's own death. ‖43–45‖

Chapter – 88

अथ विरुताध्यायः **(The Chapter on the Sounds and Cries of Omens)**

Day-Living Creatures (Dinacara Jantus)
The following are creatures active by day: *Potakī*, *Bāja* (falcon), *Śaśaghra*, *Vanjula*, *Mayūra* (peacock), *Śrīkarṇa*, *Cakravāka*, *Cāṣa*, *Aṇḍīraka*, *Khañjana*, *Parrot*, *Crow*, three types of pigeons, *Bhāradvāja*, *Garttakukuṭa*, *Donkey*, *Hariṭa* (green pigeon), *Vulture*, *Monkey*, *Pheṇṭa*, *Cock*, *Karāyikā*, *Cāṭaka*, and all similar beings.

Night-Living Creatures (Rātricara Jantus)
Fox, *Owl*, *Chippikā*, *Bāgla*, *Ullu*, and *Hare* are all nocturnal.
If these day and night creatures move contrary to their natural time, destruction of the land and death of the ruler follow. ॥2॥

Both-Day-and-Night Creatures (Ubhayācārī)
Horse, man, snake, camel, leopard, lion, bear, lizard, wolf, mongoose, deer, dog, goat, cow, tiger, swan, gazelle, jackal, cat, cuckoo, pig, and crane — all move both by day and night. ॥3॥

Regional Variations of Names and Sounds
Different regions assign variant names to omens. For instance: *Bhāṣa*, *Kūṭapurī*, *Kurabaka*, *Karāyikā* belong to one group; *Piṅgalikā*, *Pēcikā*, *Haka* belong to the owl species; *Kapotikā*, *Śyāmā* to *Potakī*; *Vajula* to *Khadiracañcu*; and so forth. These names vary with locality, and the wise should interpret omens accordingly, harmonizing them with scriptural indications. ॥4–10॥

Sounds and Movements of Birds and Animals
– The *Vajula* bird's sound "Titiḍa" is fiery; its "Kikkilī" is complete (*pūrṇa*).
– Hawks, parrots, vultures, and cranes produce fiery sounds when acting against nature. ॥11॥

Pigeon's Movements and Results
If a pigeon sits on vehicles, seats, or beds, or enters the house, it is inauspicious for humans.
The time of result varies by color: white — one year, spotted — six months, smoky or dark — immediate. ॥12–13॥

Śyāmā Bird's Sounds
"Chichit" — complete; "Śūliśūla" — auspicious; "Chachcha" — fiery; "Chikchik" — indicates meeting with a friend. ॥14॥

Hariṭa (Green Pigeon) and Bhāradvāja Bird
The *Hariṭa* bird's "Guggu" sound is complete; all others are fiery.
All sounds of *Bhāradvāja* birds are auspicious. ॥15॥

Karāyikā Bird
"Kishkishi" — complete; "Kahkaha" — auspicious; "Karkara" — favorable but not for wealth; "Kaṭukli" — brings welfare; "Kaṭukli" (soft tone) — brings rain; "Koṭikili" — ineffective; "Guṁ" — fiery. ॥16–17॥

Divyaka Bird
If seen on the left of a traveler, it is auspicious. Perched one hand high — success in desires; higher — control over lands up to the ocean.

Serpent Omen
If a serpent crosses the path, it indicates encounter with enemies and destruction of kin. If moving right to left, the journey fails. ॥19॥

Khañjana Bird
If perched on lotus, horse, elephant, or snake head — gives sovereignty; if on sacred ground or grass — auspicious; if on ash, bone, wood, chaff, or straw — sorrow for a year. ॥20॥

Tittira and Hare
The *Tittira* bird's "Kilikilikili" sound is peaceful and auspicious; other tones are inauspicious.
If a hare cries on the left at night — auspicious. ॥21॥

Monkey and Ground-Cock (Kulālakukuṭa)
The monkey's "Kilikili" sound is fiery and inauspicious, but "Chuglu" sound is auspicious.
The *Kulālakukuṭa* has similar results. ॥22॥

Cāṣa Bird
If flying in circular form above or passes by the right of a person with a mouth full of insects, it brings great gain of wealth. ॥23॥

Crow vs. Cāṣa
If the *Cāṣa* bird fights with a crow and is defeated on the south side, it foretells the traveler's death; if victorious on the north side, success follows. ॥24॥

Cāṣa's Words
Its "Ke-ka" cry is victorious; "Kra-kra" fiery and inauspicious; but its sight is always auspicious. ॥25॥

Aṇḍīraka and Pheṇṭa Birds
Aṇḍīraka's "Tī-tī" sound is complete; "Tiṭiṭṭi" is fiery.
The *Pheṇṭa* bird is auspicious on the traveler's left side; its other sounds are unspecified. ॥26॥

Śrīkarṇa Bird
If on the right and utters "Ka-ka-ka," it is auspicious; "Chik-chik" — moderate; others inauspicious. ॥27॥

Bhāṇḍarīka Bird
If on the left and utters "Chirilivirilu," it brings fortune; if moving from left to right — early success; reversed — death, bondage, and fear. ॥28–29॥

Mainā (Starling)
Its "Kra-kra" or fearless "Tre-tre" sound indicates bleeding or injury. ॥30॥

Pheṇṭa Bird Again
If saying “Chirilivirilu” on the left, it is auspicious; others fiery. ॥31॥

Donkey’s Voice
If a donkey brays on the left uttering an “Oṁ”-like sound, it brings success; all other sounds are fiery. ॥32॥

Deer and Gazelle
The “Ākāra” sound of deer and “Oṁ” of gazelle are complete; all others fiery. Complete tones are auspicious, fiery tones inauspicious. ॥33॥

Cock (Rooster)
All cries of frightened cocks at night, except “Ku-ku-ku-ku,” bring fear.
If a healthy cock crows at dawn in a clear tone, it brings growth to kingdom and prosperity to rulers. ॥35॥

Lizard and Cat
Among the many sounds of *Chippikā* (lizard), “Kulukulu” is inauspicious; others auspicious.
The cat’s cry is inauspicious, and a cow’s sneeze during travel indicates death. ॥36॥

Owl (Ullu)
Desiring its mate, the owl utters “Huṁ-huṁ-guguluk” joyfully.
Its “Gurulu” sound is complete; “Kiskisi” fiery; “Balbala” (repeated) — quarrels; “Taṭṭaṭṭa” — harmful; others fiery. ॥37॥

Swan (Sārasa)
If both male and female cry together, it gives desired results; if only one, it is inauspicious. Delay between their calls is also inauspicious. ॥38॥

Piṅgalā Bird
Its “Chirilivirilu” sound is auspicious; others fiery.
“Īśi” sound — obstructs movement; “Kuśukuśu” — brings distress. ॥39॥

Ritual for Success Through Piṅgalā Bird
At dusk, the seeker should purify himself, wear fresh garments, and worship the tree of the *Piṅgalā* bird with fragrant substances like sandalwood, saffron, musk, and agarwood, invoking Brahmā, Viṣṇu, and Maheśa.
At midnight, facing the southeast, he should solemnly ask the bird his desired question with faith, reciting prescribed mantras. ॥40–41॥

Mantra to be Recited
“O Auspicious One! I begin this inquiry which you already know. O Blessed One, knower of all speech! I shall depart after asking tonight and return at dawn to ask again. Reveal clearly through your gestures so I may know without doubt.” ॥42–44॥

Interpretation of Piṅgalā's Response
If after this invocation, the *Piṅgalā* sitting on the tree utters "Chirilu-Irilu," success is certain.
If she says "Dhiśikāra" or "Kuchākucha," it means anxiety.
If she remains silent, the wish is fulfilled.
Also, if perched on the top branch — great success; middle branch — moderate; lower branch — small success. ॥45–46॥

Lizard and Mole (Chhipkalī and Chhuchhundar)
The lizard's omen is interpreted by its position within or outside the central navel area of the directional wheel.
The mole's "Chichchiḍa" sound is fiery; its "Tiṭṭiḍa" sound is complete and auspicious. ॥47॥

Chapter – 89

अथ श्वचक्राध्यायः **(The Chapter on the Omens of Dogs)**

The Behavior of Dogs
When a dog urinates on objects such as a man, horse, elephant, pitcher, bed, milk-bearing trees (like *āk*), a heap of bricks, umbrella, couch, seat, mortar, flag, chowrie, *dūrvā* grass, or a place filled with flowers, and then passes ahead of a traveler, it signifies success in his undertaking.
If the dog urinates on **wet dung** before moving ahead, it indicates gain of sweet food; if on **dry things**, gain of dry grains, jaggery, or sweetmeats.

If a dog urinates on **poisonous or thorny trees**, **wood**, **stones**, **dry trees**, or **bones from cremation grounds**, and then strikes them with its paw before proceeding ahead, it foretells misfortune.
If it urinates on **a bed** or a **new unbroken pot**, it causes defects in maidens; if on a **used pot**, it brings fault to one's wife — the same applies when urinating on **shoes**: on a **new shoe**, it harms a maiden; on an **old one**, it brings defect to the wife.
If a dog urinates on a **cow**, it indicates the birth of offspring of mixed caste in that household.

If a dog carries a **shoe** in its mouth and comes near the traveler, it signifies success; if it brings **flesh**, wealth; if **moist bone**, good fortune; if **burnt wood** or **dry flesh**, death of the traveler; if **a burnt stick without fire**, trouble.
If it brings **a human limb** (head, hand, or foot), it signifies gain of land; if **cloth or bark garments**, death.
Some say that if the dog brings **cloth**, it may even be auspicious.

If it carries a **dry bone** into the house, it brings death to the master; if it carries **chains, vines, or leather cords**, it causes imprisonment.
If it **licks the traveler's feet**, **shakes its ears**, or tries to climb upon him, it brings obstacles to the journey.
If it **scratches its body** or **blocks the way**, the path will have obstructions.
If it lies on its back before a person or a traveler, it always portends evil.

(Teachings of Sage Dharma)

Crying of Dogs
If one or many dogs, facing the sun at sunrise, howl together, it indicates that soon another ruler will come to power. ‖2‖
If a dog in the **southeast** howls facing the sun, it indicates imminent fear from fire or thieves; if it howls at **midday**, it foretells danger from fire or death; and if it howls **in the afternoon**, it indicates battles with bloodshed. ‖3‖
At **sunset**, howling facing the sun causes fear to farmers; if during **twilight** from the **northwest**, it foretells fear from wind and thieves. ‖4‖

If at **midnight**, a dog howls facing the **north**, it brings distress to Brāhmaṇas and theft of cows.
If at **dawn**, a dog howls facing the **northeast**, it defiles maidens, brings fear from fire, and causes miscarriage among women.

If during the **rainy season**, a dog howls loudly while standing in a hut made of grass, palace, or mansion, it indicates heavy rain; if in other seasons it howls in such places, it indicates death, fire, or disease. ‖6‖

If during drought a dog bathes in water, repeatedly shakes its body, and drinks water while standing or glancing upward, rainfall will occur after twelve days. ‖7‖

If a dog, standing at the door, keeps its **head inside** and **body outside**, and howls while looking at the housewife, it indicates that the woman is unchaste. ‖8‖

If a dog digs at the **wall of a house**, it foretells breach of peace there; if it digs at a **cow pen**, it indicates theft of cows; and if it digs at a **granary or field**, gain of grain. ‖9‖

If a dog's **one eye is tearful** and its **vision dim**, and it eats little food, it brings sorrow to the house.
If it plays with **cows**, it brings prosperity, peace, health, and happiness. ‖10‖

If it **sniffs the left thigh**, it brings wealth; if the **right thigh**, quarrel with women; if the **left leg**, indulgence in pleasures; and if the **right leg**, enmity with friends. ‖11‖

If it **sniffs both feet**, it stops the journey; but if the traveler stands still, it grants fulfillment of desires.
If it **sniffs the shoes**, it indicates imminent travel. ॥12॥

If it **sniffs the arms**, it foretells fear from enemies or thieves.
If it **hides food, flesh, or bones in ashes**, it brings danger from fire.

If a dog **howls first in the village** and then at the **cremation ground**, it foretells the death of an eminent man.
If it **howls before a traveler**, it stops the journey. ॥14॥

If it **howls with the vowel "u"** on the **left side** of a traveler, it brings success; if with **"o"**, gain of wealth; if with **"au"**, anxiety; if it howls **behind**, it prohibits travel. ॥15॥

If a dog, as if beaten, howls loudly again and again, or if many dogs run together barking, it signifies desolation of the town and fear of death. ॥16॥

If a dog **shows its teeth and licks the tip of its lips**, it indicates gain of sweets; if it licks only the inner mouth without the lips, it obstructs a man about to eat. ॥17॥

If dogs gather in the **center of a village or town** and bark repeatedly, it indicates distress to the ruler.
If they are in a **forest**, their omens should be judged like those of deer — *"Ojāḥ pradakṣiṇaṃ śastā mṛgāḥ sanakulāṇḍajāḥ"*, and so forth. ॥18॥

If a dog barks **near a tree**, it foretells rain; near **Indra's post (Indrakīla)**, distress to ministers; within the **house** or in the **northwest corner**, fear to grains; if at the **city gate**, distress to the town.
If it barks **on a bed**, it causes fear to the sleeper; if it barks **behind a traveler**, danger to that person; if it barks **on the left side of people**, it brings fear from enemies. ॥19–20॥

Chapter – 90

अथ शिवारुताध्यायः **(The Chapter on the Cries of Jackals)**

The jackal's results resemble those of dogs, except that during **winter (Śiśira)**, when jackals are in mating season, their omens bear no significance.
When its cry ends in **"hū-hū"** or **"ṭā-ṭā"**, those are complete sounds (*pūrṇa*); all others are fiery (*dīpta*). ॥1॥

Lomaśikā's Behavior
Its natural "kaka" sound is complete; other tones are unnatural and fiery. ॥2॥

Śṛgālī's Behavior
A jackal positioned in the **east** or **north** brings auspicious results; one in any **calm direction** is favorable; if it faces a **smoky (dhūmita)** direction and cries harshly, it causes destruction of that direction's lord. ‖3‖

Lords of the Directions
King, prince, commander, messenger, merchant, spy, Brāhmaṇa, and minister — these preside over the eight directions eastward in order.
Among the four main directions — east, south, west, and north — the lords correspond respectively to Kṣatriya, Vaiśya, Śūdra, and Brāhmaṇa. ‖4‖

Inauspicious Cries of Jackals
Fiery cries are inauspicious in all directions, especially during the day.
In towns or armies, a jackal in the **south**, facing the **sun**, causes distress. ‖5‖

Specific Sounds and Their Effects
If a jackal cries "yāhi," it indicates danger from fire;
If "ṭā-ṭā," death;
If "dhik-dhik," great distress;
If flames emerge from its mouth, destruction of the land. ‖6‖

Another View (Kāśyapa's Opinion)
Some sages like Kāśyapa say that flames from a jackal's mouth are not dreadful — they arise from saliva reflecting sunlight, not actual fire. ‖7‖

Combined Howls
If two jackals howl together — one in the **south**, it indicates death by hanging; if in the **west**, death by drowning. ‖8‖

Results by Number of Howls
– One cry → peace
– Two cries → good news
– Three or four → gain of wealth
– Four → arrival of a beloved
– Five → distress
– Six → conflict among leaders
– Seven → prosperity
Eight or more are disregarded.
In the **south**, except for the fifth and sixth, the results are reversed:
One → disturbance, two → bad news, three → loss of wealth, four → separation, five → distress, six → quarrels, seven → loss of property. ‖9–10‖

Ominous Jackals
If its cry causes human hair to stand, horses to excrete, or men to tremble, it is inauspicious. ‖11‖

Auspicious Jackals
If a jackal stops howling after hearing the voice of a man, elephant, or horse, it brings auspiciousness to towns and armies. ॥12॥

If it cries “bhe-bhā,” it signifies fear; “bho-bho,” death or bondage; “hu-hu,” benefit to the listener. ॥13॥

Auspicious Sounds of Jackals
If standing in a calm direction, it first utters “a” and then “ā” sounds, or cries “ṭā-ṭā,” or “ṭe-ṭe” followed by “the-the,” these cheerful tones are auspicious. ॥14॥

If it first makes a harsh tone and then howls like a jackal, it brings security, gain of wealth, and reunion with loved ones. ॥15॥

Chapter – 91

अथ मृगचेष्टिताध्यायः **(The Chapter on the Behavior of Deer)**

If wild deer stand on the boundary of a village crying harshly, it indicates **present calamity**; if they move away, **past calamity**; if they come toward it, **future distress**.
If they move around the village, they bring **desolation**. ॥1॥

If **domestic animals** cry after the wild deer on the boundary, it means **fear**; if **forest animals** cry after them, **siege of the village**; and if **both forest and domestic beasts** cry together, **abduction of women by force**. ॥2॥

If **wild animals** stand at the **town gate**, they indicate **enemy siege**; if they **enter a house**, destruction of that house; if they **give birth there**, death; if they **stay inside**, fear; and if they **re-enter**, bondage of the householder. ॥3॥

Chapter – 92

अथ गवेङ्गिताध्यायः **(The Chapter on the Behavior of Cows)**

A **weak cow** is inauspicious for kings;
a cow **scraping the earth** with its hooves brings disease;
a **tearful-eyed cow** brings death to its master;
and a **terrified cow lowing loudly** signifies fear from thieves. ॥1॥

If a cow lows **without cause**, it foretells misfortune; if at **night**, danger.
If an **ox lows at night**, it is auspicious.
If a cow is surrounded by **flies** or **puppies**, it indicates coming rain. ॥2॥

If a **sweet-sounding cow** enters the house, it brings increase of cattle.
A **wet-bodied, bristled cow** is also auspicious for prosperity — the same applies to a **buffalo (mahiṣī)**. ॥3॥

Chapter – 93

अथ अश्वेङ्गिताध्यायः **(The Chapter on the Behavior of Horses)**

If fire appears **to the west or left** of a horse's stable, it is inauspicious; to the **east or right**, auspicious.
If fire appears all over the horse's body (*sarvāṅga-jvalana*), it causes loss.
If for two years sparks or smoke constantly arise from a horse's body, it too is inauspicious.

Fiery Parts and Results
– If the **genitals** glow, destruction of the royal harem.
– If the **belly**, loss of treasury.
– If the **anus or tail**, defeat.
– If the **face or head**, victory. ॥2॥

If **shoulders, back, or neck** shine — victory.
If **feet** glow — death of the master.
If **forehead, chest, eyes, or arms** emit smoke — defeat; if fire — victory. ॥3॥

If during night the **nostrils, nose bridge, head, tears, or eyes** glow, it brings victory.
If horses of **red, black, mottled, parrot-green, or white** color glow partially, it is auspicious. ॥4॥

If a horse **refuses grass or water**, **falls**, **perspires excessively**, **trembles**, **bleeds from the mouth**, **stays awake at night**, **sleeps by day**, or shows **laziness, sadness, or head-drooping**, these are inauspicious signs. ॥5॥

If one horse **mounts another**, or a **healthy horse bearing a rider** refuses food in distress, it is inauspicious. ॥6॥

If a horse neighs **like a crane**, raises its neck upward and cries repeatedly in high tones, or neighs joyfully even with its mouth full, it portends **slaughter of enemies**. ॥7॥

If while neighing, auspicious objects like **pots full of sacred things**, **curd**, **Brāhmaṇas**, **deities**, **perfumes**, **flowers**, **fruits**, **gold**, **silver**, or **gems** are nearby, it foretells **victory**. ॥8॥

Horses that **happily eat**, **drink**, **accept reins**, **obey the master's will**, and look toward the **right side** bring fulfillment of desires. ॥9॥

Horses that **scratch the ground with the left hoof** cause their master's foreign travel; those that **neigh at sunrise, noon, sunset, or midnight** while facing bright directions cause bondage and defeat. ॥10॥

If horses **neigh excessively**, **swing their tails**, or **lie down**, they indicate journeys.
If they **shed hair**, **bray like donkeys**, or **eat dust**, they portend danger. ॥11॥

If a horse bends its knees like a **vessel** and sleeps on its **right side**, or stands raising its **right foot**, it signifies victory.
For other animals like elephants and camels, similar results should be interpreted as applicable. ॥12॥

When a **king mounts** a horse that moves humbly yet promptly in the desired direction, neighs in response to other horses, or touches its own **right side with its mouth**, it ensures increase in royal fortune. ॥13॥

If a horse **urinates or defecates repeatedly**, refuses to move in the desired direction, fears without cause, or has **tearful eyes**, it is inauspicious for its master. ॥14॥

Conclusion
Thus are described the behaviors of horses. Next follows the chapter on **the omens of elephants**, whose trembling, breaking, or dulling of tusks yield various results. ॥15॥

Chapter – 94

अथ हस्तिचेष्टिताध्यायः **(The Chapter on the Behavior of Elephants)**

Characteristics of the Elephant's Tusks
The circumference at the root of the elephant's tusk should be doubled, and from the portion equal to that, leaving out the root part, all calculations and markings are to be made.
In elephants from watery regions, a little more portion is to be left, while in those dwelling in hilly regions, a little less. ॥1॥

Auspicious and Inauspicious Marks on Elephant Tusks
If, while cutting the tusk, symbols like a **Bilva tree**, **Vardhamāna (crescent)**, **umbrella**, **flag**, or **chowrie** appear, it brings **health, prosperity, and happiness**. ॥2॥

If the mark resembles a **weapon**, it signifies **victory**; if like **a whirlpool**, **acquisition of lost territory**; and if like a **lump of clay**, **gain of already attained land**. ‖3‖

If the mark resembles a **woman**, it causes **loss of wealth**; if like a **beetle**, **birth of a son**; if like a **pot**, **gain of treasure**; and if like a **rod**, **obstacle in journey**. ‖4‖

If the marks resemble **a chameleon, lizard, monkey, or serpent**, they indicate **famine, disease, or subjugation by enemies**.
If like **a vulture, owl, crow, or falcon**, they signify **death**. ‖5‖

If the mark resembles a **noose or headless body**, it foretells the **king's death**.
If **blood oozes out** while cutting, it indicates **calamity upon men**.
If the tusk is **black, yellow, dry, or foul-smelling**, it is inauspicious.

Cavity and Bed Signs
If the cavity of the tusk is **white, even, fragrant, and clear**, it is auspicious. These are called *signs of the seat*, and similar signs apply to *the bed*. ‖7‖

Other Results of Elephants
Deities dwell in the **root**, demons in the **middle**, and men in the **tip** of the tusk.
The result of the root is **strong**, of the middle **moderate**, and of the tip **weak**.
Also, results from the root occur **soon (within a week)**, from the middle **within a month**, and from the tip **after a long time**. ‖8‖

Special Indications
If the **right tusk** breaks from the **root**, the king flees;
if from the **middle**, the land flees;
if from the **tip**, the army flees.
If the **left tusk** breaks from the root, middle, or tip, it destroys the **prince, priest, commander, army, queen, and chief ministers** respectively. ‖9‖

If **both tusks** break, it indicates the **destruction of the royal family**.
An elephant born under **auspicious signs**—favorable zodiac (Taurus, Gemini, Cancer, Virgo, Libra, Sagittarius, Pisces), **pure lunar days**, and **gentle constellations**—brings prosperity.
The reverse brings misfortune. ‖10‖

Specific Results of Tusk Breakage
If the **left tusk** breaks in the **middle** while rubbing against trees bearing **milk, sweet fruits, or flowers**, or while **breaking riverbanks**, it destroys enemies.
If the opposite occurs (breaking against bad trees), it increases the strength of enemies. ‖11‖

Inauspicious Actions of Elephants
If an elephant suddenly stops walking, ceases to move its ears, keeps its trunk on the ground with sorrow, breathes heavily, stares vacantly, sleeps excessively, walks backward, eats inedible things, or defecates frequently with blood, it portends **danger and calamity**. ‖12‖

Auspicious Actions of Elephants
If the elephant, by its own will, rubs mounds, trees, bushes, or grass with joy, raises its head, moves swiftly toward the direction of journey, sprinkles water while the seat is being fixed, trumpets loudly, is full of ichor, or wraps its **right tusk with its trunk**, it brings **victory**. ॥13॥

Other Indications
If a **crocodile drags the elephant into water**, it causes the **king's downfall**;
if the **elephant drags the crocodile out of water**, it ensures the **king's success and prosperity**. ॥15॥

Chapter – 95

अथ वायसविरुताध्यायः **(The Chapter on the Cries of Crows)**

Regional Interpretations
For people of the **eastern lands**, a **crow on the south** and a **karāyikā bird on the north** are auspicious.
For people of **other regions**, the reverse applies.
By common tradition, the countries beginning from the east are to be recognized accordingly. ॥1॥

Behavior and Results of Crows
If during the month of **Vaiśākha**, a crow builds its nest on a **healthy tree**, it brings **abundance and auspiciousness**;
if on **thorny, decayed, or barren trees**, it foretells **famine**. ॥2॥

Connection Between Nesting and Rainfall
If in **autumn**, a crow builds its nest on the **eastern branch** of a tree, rain first occurs in the **west**.
If in the **south or north**, rainfall is **abundant**;
if in the **southeast**, it brings **uneven rainfall**;
if in the **southwest**, it causes **good harvest of autumn crops**;
if in **northwest or northeast**, it brings **prosperity**, though in the northwest, there are also **many rats**. ॥3–4॥

If a crow builds its nest in **reeds, grass, bushes, grain heaps, mansions, or near the ground**, the country suffers from **theft, drought, and disease**. ॥5॥

If a crow has **two to four chicks**, it brings **abundance**;
if **five**, the land falls under **another ruler**;
if it **drops or lays only one egg**, it causes **misfortune**. ॥6॥

Special Signs in Crow Chicks
If a chick's color resembles **perfumed substances**, it indicates **rise of thieves**;

if **spotted**, **death**;
if **white**, **fire danger**;
if **deformed**, **famine**. ‖7–8‖

Other Behaviors

If crows **caw loudly without reason in villages**, famine arises;
if they **gather in a circle**, siege of the city;
if they **stand in groups**, disturbances. ‖9‖

If crows, **fearlessly attacking people with beaks, wings, or claws**, act violently, it signifies **growth of enemies**;
if they **wander at night**, destruction of people. ‖10‖

If crows **fly clockwise**, fear from **relatives**;
if **anticlockwise**, fear from **enemies**;
if they **fly in agitation**, the observer faces **instability**. ‖11‖

If crows **look upward fluttering their wings**, danger on journey;
if they **steal grains**, famine;
if they **sit on soldiers or weapons**, battle;
if their feathers are **black like a cuckoo's**, fear from thieves. ‖12‖

If crows **drop ashes, bones, hair, or leaves on a bed**, the bed's owner dies;
if they **drop gems, flowers, or fruits**, a son is born;
if **grass or wood**, a daughter. ‖13‖

If a crow brings **sand, grains, moist earth, flowers, or fruits** to its place, it means **wealth gain**;
if it **flies off with a vessel near water**, danger. ‖14‖

If a crow **pecks the shadow of one's vehicle, weapon, shoe, or umbrella**, death is near;
if it **decorates them with flowers**, honor;
if it **drops excreta**, food gain. ‖15‖

If a crow **brings an object**, the owner gains; if it **takes away**, the owner loses.
If the object is **yellow**, gold; **cotton**, clothes; **white**, silver—accordingly, gain or loss occurs. ‖16‖

If crows **sit on milky trees, Arjuna, Vajula, or riverbanks** and caw, or **bathe in dust or water**, they bring **rain in monsoon** and **drought in other seasons**. ‖17‖

If a crow **cries fiercely inside a tree hole**, it signifies **great danger**;
if after **seeing water or thunder**, it foretells **rain**. ‖18‖

If a crow, **distressed under a vine trellis**, beats itself with its beak or wings, and carries **red substances, milk, grass, or wood** home, it indicates **fire danger**. ‖19‖

Results According to Fiery Directions
If a crow perches on a house and caws facing fiery directions —
East: fear from king
South: fear from thieves
West: bondage
North: quarrels
If facing intermediate fiery directions, fear to cattle. ‖20‖

Results According to Calm Directions
Facing calm east — meeting with noblemen, gain of gold, and sweet food.
Facing calm southeast — contact with goldsmiths or young women, gain of metals.
Facing calm south — gain of black gram and meeting with singers. ‖21‖
Facing calm southwest — gain of messengers, horse equipment, curd, oil, meat, and food.
Facing calm west — gain of meat, liquor, grains, and sea gems. ‖22‖
Facing calm northwest — gain of weapons, iron, lotuses, vines, fruits, and food.
Facing calm north — gain of milk-rice, horse, and clothes. ‖23‖
Facing calm northeast — gain of ghee-rich food and oxen.
A crow behind the house gives the same results to the householder. ‖27‖

Crows at Ear Level During Travel
If, during a journey, a crow flies at ear level, it indicates **safety**, but **no success**.
If it comes ahead and caws, it causes **obstruction**. ‖25‖

Right and Left-Side Results
If a crow caws **first on the left** and then on the **right**, it indicates **loss of wealth**.
If the opposite, **gain of wealth**. ‖26‖

If a crow **behind the traveler on the left** caws repeatedly while moving forward, it brings **success**.
For those from the **eastern regions**, a crow **on the south side** brings similar success. ‖27‖

If a crow **approaches from the front and caws**, the journey is hindered, but the **desired result** is achieved **at home itself**. ‖28‖

If a crow **first caws on the right and then the left**, it ensures **gain of desired wealth**;
if it caws and moves ahead, **great gain of money** occurs. ‖29‖

If a crow **caws from behind and flies to the right**, the traveler will **bleed**;
if it **stands on one leg facing the sun and caws**, **bleeding** will soon occur. ‖30‖

If it **stands on one leg facing the sun and pecks its feathers**, it foretells the **death of a great person**. ‖31‖

If a crow **caws calmly near a grain-filled field**, it brings **gain of land and grain**;
if it caws **restlessly at the village boundary**, it brings **trouble**. ‖32‖

If perched on **smooth leaves, tender sprouts, flowers, or fruits** on a fragrant, pleasing tree, it brings **success**. ॥33॥

If sitting on **ripe-grain fields, sacred places, green grounds, elevated or pure places**, it indicates **wealth gain**. ॥34॥

If perched on a **cow's tail** or **mound**, it brings **sight of snakes**;
on a **buffalo**, **fever**;
on a **bush**, **slight fortune or misfortune**. ॥35॥

If sitting on a **heap of grass** or **left-side water**, it causes **failure of work**;
on **burnt or lightning-struck trees**, **death**. ॥36॥

If perched on a **thorny tree exuding milk**, it brings **success with quarrels**;
on a **thorny tree only**, **failure**;
on a **vine-entwined tree**, **imprisonment**. ॥37॥

Chapter – 95 (continued)

अथ वायसविरुताध्यायः **(The Chapter on the Cries of Crows)**

Crows Perched on Cut or Dry Trees
If a crow perches on a **tree cut from above**, it indicates **loss of limbs**; if on a **dry tree**, it foretells **quarrels**; and if sitting **before or behind dung**, it brings **gain of wealth**. ॥38॥

Crows on Dead Bodies or Human Limbs
If a crow sits upon the **limbs of a dead man** and caws while appearing before a traveler, it causes **fear of death**.
If it **breaks bones with its beak**, it foretells that the traveler's **bones may be broken**. ॥39॥

Other Results from a Crow's Actions
If a crow holds in its beak **a rope, bone, wood, thorny object, useless thing, or hair** while cawing, it brings respectively **fear from serpents, disease, wild beasts, wounds, weapons, and fire**.
However, if it holds **white flowers, impure objects, or flesh** in its beak while cawing, it ensures **fulfillment of desires**.
If it **flaps its wings repeatedly while facing upward and caws**, it **obstructs journeys**. ॥41॥

If a crow caws holding **iron chains, leather cords, or creepers**, it signifies **bondage**;
and if it sits upon a **stone**, it foretells **meeting with an unknown person on the path**. ॥42॥

If **two crows** feed each other with food, it brings **great satisfaction** to travelers;
if a **male and female crow** caw together, it foretells **union with a woman**. ॥43॥

If a **crow sits on a water-filled pot placed on a woman's head**, it indicates **gain of a woman**;
if it **pecks the pot**, **death of her son**;
if it **defecates on it**, **gain of food**. ॥44॥

When a king on campaign halts at a temporary camp (*Skandhāvāra*), and a crow there **flaps its wings and caws**, it foretells **relocation to another place**;
if it **keeps its wings still and caws**, it signifies **fear only, not movement**. ॥45॥

If crows enter a **city or army camp** along with **vultures and cranes**, peacefully and without flesh in their beaks, it indicates **friendship with enemies**;
if they enter **quarreling**, it brings **war**. ॥46॥

If a crow sits on a **pig**, it signifies **imprisonment**;
if on a **mud-smeared pig**, **gain of wealth**;
if on a **donkey or camel**, **welfare and peace**.
Some say that a crow perched on a **donkey** causes **death**. ॥47॥

If a **crow perches on a horse** and caws, it foretells **gain of a vehicle**;
if it **follows behind a traveler while cawing**, it signifies **bleeding**.
Other birds following behind a traveler yield similar results as the crow. ॥48॥

Special Instruction (Vishesh)
In a **thirty-twofold directional circle (Dik Chakra)**, the results should be interpreted according to the same rules as before:
A **calm eastward omen** gives **auspicious results**,
a **moderate omen** brings **average results**,
and a **fierce eastward omen** with harsh gestures causes **fear from the king**, and so forth.
॥49॥

Results of a Crow's Sounds
If a crow, while sitting in its nest, utters—

- "**Ka**" → fruitless,
- "**Kava**" → for its own delight,
- "**Ka**" (softly) → gain of a dear friend,

- “**Kara**” → quarrel,
- “**Kuru-kuru**” → happiness,
- “**Kaṭ-kaṭ**” → gain of curd or milk food,
- “**Keke**” or “**Kuku**” → wealth to the traveler. ‖50–51‖

If it says “**Khare-khare**,” a **guest or traveler** will soon arrive;
“**Kakhā-khā**” foretells **death of the traveler**;
“**Ā**” brings **obstacle in journey**;
“**Kakhala**” causes **immediate rain**. ‖52‖

“**Kāka**” brings **destruction**,
“**Kākaṭi**” indicates **poisoned food**,
“**Kava-kava**” denotes **romantic affection**,
and “**Kagāku**” signifies **imprisonment**. ‖53‖

If it utters “**Karagau**,” rain occurs;
“**Guḍ**” brings **fear**;
“**Vaḍ**” gives **gain of clothes**;
“**Kalaya**” unites **Brāhmaṇas and Śūdras**. ‖54‖

If it says “**Kaḍ**,” one gains **desired results** and sees an **auspicious serpent**;
“**Ṭaḍḍū**” indicates **attack**;
“**Strī**” denotes **union with a woman**;
“**Gaḍ**,” **gain of cows**;
and “**Puḍ**,” **gain of flowers**. ‖55‖

If the crow says “**Ṭāku-ṭāku**,” it causes **war**;
“**Guhu**,” **fear of fire**;
“**Kaṭe-kaṭe**,” **quarrel**;
and “**Ṭākuḷi, Chiṇṭi-chi, Keke-kā**,” **defects and faults**. ‖56‖

Special Note
The results stated for **one crow’s actions, cries, feeding, or perching** apply similarly to **two or more crows**.
Other **unspecified birds** should also be interpreted like crows.
Likewise, the behavior of **forest animals** and **wild beasts** (like pigs, etc.) should be understood as **similar to that of dogs**. ‖57‖

Behavior of Other Creatures

If **land animals (like goats, etc.)** move into **water**, or **aquatic beings (like fish)** move on **land**, during the rainy season it brings **heavy rain**; in other seasons, **fear and calamity**.

If **bees build hives inside a house**, that house soon becomes **deserted**.

If **blue-colored flies** sit on a man's head, it indicates **death**. ॥58॥

Ants' Behavior

If **ants place their eggs in water**, it foretells **drought**.

If the same ants **carry their eggs upward on trees or high places**, it indicates **impending rain**. ॥59॥

Certainty of Omens

At the **beginning of any undertaking or journey**, the omen seen determines the **final result**.

If an omen appears **midway**, its result manifests **that same day**.

All omens described in this chapter should be observed **at all times** — during travel, rituals, and house entry.

Sneezing, however, is **never auspicious** for any work. ॥60॥

Praise of Auspicious Omens

The auspicious omens mentioned above bless kings with **good fortune**, ensure **success without obstacles**, protect **native places**, assist **on journeys**, subdue **wicked enemies**, and grant **health**— all through their **favorable gestures**. ॥61॥

Action upon Seeing Inauspicious Omens

According to sages like Kāśyapa —

After traveling **one *kos* (approx. 3 km)**, the effect of an omen's sound ceases.

If the **first omen** on a journey is inauspicious, perform **11 *prāṇāyāmas***;

if the **second** is inauspicious, perform **16 *prāṇāyāmas***;

if the **third** is inauspicious, **return home** immediately. ॥62॥

Method of Prāṇāyāma

While exhaling, recite the **seven Vyāhṛtis** —

Om Bhūḥ, Om Bhuvaḥ, Om Svaḥ, Om Mahaḥ, Om Janaḥ, Om Tapaḥ, Om Satyam,

together with **Om** (Pranava), the **Śiras mantra** (*Āpo Jyotī Raso'mṛtam*), and the **Gāyatrī mantra** (*Tat Savitur Vareṇyam Bhargo Devasya Dhīmahi Dhiyo Yo Naḥ Prachodayāt*) —

repeating this cycle **three times**. ॥63॥

Chapter – 96

अथ शाकुनोक्तराध्यायः **(The Chapter on Interpretations of Omens)**

Preliminary Instructions for Prediction
For determining the results of omens, the astrologer should consider —
directions (east, west, etc.), regions, behavior, tones (fierce or calm), day, constellation, *muhūrta*, planetary hour (*horā*), *karaṇa*, ascendant (*lagna*), divisions (*aṃśa*, *navāṃśa*, *dreṣkāṇa*, etc.), and the nature of signs — movable, fixed, or dual — and interpret accordingly. ॥1॥

Two Kinds of Works
In any region, men engage in two types of works —
(1) **Future (Āgāmi)** and
(2) **Fixed (Sthira)** (pertaining to present or past).
Royal missions, diplomatic endeavors, secret tasks, and foreign messages are **future works**, while troubles, family meetings, and arrivals of friends are **immediate events**. ॥2॥

Fixed and Movable Results
Actions such as **residence, accumulation, eating, theft, fire, rain, festivals, childbirth, killing, quarrels, and fear** are *fixed categories*.
If these appear through omens in *fixed places*, they yield *immediate results*;
if in *movable signs* (ascendant or Moon), results manifest in the *future*. ॥3॥

Marks of Fixed and Movable Places
Omens occurring in **immovable places** — stone, house, temple, ground, or near water — pertain to **current events**.
Those in **moving regions** (roads, travelers, etc.) indicate **future events**. ॥4॥

Signs of Rain
When **watery signs (Cancer, Capricorn, Pisces)** rise, or when **watery constellations (Pūrvāṣāḍhā, Śatabhiṣaj)**, **watery muhūrtas**, **western direction**, or **aquatic sites** are involved, and a **fierce omen** occurs, it causes **rainfall**.
Even calm aquatic omens seen near water bring **rain**. ॥5॥

Signs of Fire or Danger from Fire
If omens occur in the **southeast** direction, in **fiery signs (Aries, Leo, Scorpio, Capricorn, Aquarius)**, in **Agni muhūrta**, or under **fiery stars (Kṛttikā)**, and shine under the **Sun**, they indicate **fire accidents**.
If under *Viṣṭi Karaṇa* or with *Saturn's signs* (Capricorn, Aquarius), or perched on **thorny or leafless trees**, they bring **misfortune**. ॥6॥

Signs of Quarrel
If domestic birds utter **fierce sounds**, perch on **thorny trees**, and fierce omens appear in

Mars' signs (Aries, Scorpio), especially in **southwest direction**, they indicate **conflict or quarrel**. ‖7‖

Union with a Woman
If during **Cancer ascendant**, in **Venus's navāṃśa**, an omen appears in an **intermediate direction**, looking **downward** and sounding fiercely, it denotes **union with a woman** of that direction. ‖8‖

Union with Men or Eunuchs
If the ascendant is a **male sign (Aries, Gemini, Leo, Libra, Sagittarius, Aquarius)**, tithi **odd**, and direction **main (E, S, W, N)**, and a **fierce male omen** appears, it foretells **union with men**.
If the sign and tithi are **mixed (odd-even)** or direction **intermediate**, it indicates **union with eunuchs**. ‖9‖

Arrival of a Nobleman
If **Sun's sign** rises in both **lagna and navāṃśa**, or if the **Sun himself** occupies the **ascendant** when an omen is heard, it denotes the **arrival of a chief person**. ‖10‖

Determination of Success or Failure
Count from the Sun's sign to the lagna sign —
if the lagna falls in the **prosperous (saṃpat)** sign, success occurs;
if in the **adverse (vipat)** sign, failure follows. ‖11‖

Knowing the Form of the Visitor
If the **Sun** is in the **12th from lagna**, the visitor is **blind in the right eye**;
if **Moon**, **blind in the left**;
if **Sun** in lagna is aspected by **malefics**, the man is **blind**;
if **Sun in Leo**, **hunchbacked, deaf, and foolish**.
If any sign's **6th place** is occupied by **malefics** and aspected by others, the person has **defects in the corresponding limb**. ‖12–13‖

Purpose of Omen-based Naming
After understanding omens, the names formed from **letters and sounds** associated with **metals, herbs, and living beings**, constructed through sacred syllables and traditional sequences, are explained. ‖1‖

The naming process uses **lagna**, **4th**, **7th**, and **10th houses** with their **navāṃśas**, deriving syllables from planetary and sign associations. ‖2–16‖

Letter Arrangements in the Fifth and Sixth Navāṁśas of Aries Ascendant

When the ascendant is in the fifth Navāṁśa of Aries (Meṣa), the lord of the fifth Navāṁśa is the Sun, whose group gives the second letter ‘A’. In the fourth sign (Cancer), the fifth Navāṁśa lord is Mars, whose group gives the fourth letter ‘Gha’. In the seventh sign (Libra), the fifth Navāṁśa lord is Saturn, whose group gives the fourth letter ‘Ma’. In the tenth sign (Capricorn), the fifth Navāṁśa lord is Venus, whose group gives the fourth letter ‘Jha’.

When the ascendant is in the sixth Navāṁśa, the lord of that Navāṁśa is Mercury, whose group gives the third letter ‘Ḍa’. In the fourth sign (Cancer), the sixth Navāṁśa lord is Jupiter, whose group gives the third letter ‘Da’. In the seventh sign (Libra), the sixth Navāṁśa lord is Venus, whose group gives the fourth letter ‘Dha’. In the tenth sign (Capricorn), the sixth Navāṁśa lord is Mercury, whose group gives the fourth letter ‘Ḍha’. ‖17‖

Letter Arrangements in the Seventh and Eighth Navāṁśas of Aries Ascendant

When the ascendant is in the seventh Navāṁśa of Aries, the lord is Venus, whose group gives the fifth letter ‘Ña’. In the fourth sign (Cancer), the seventh Navāṁśa lord is Saturn, whose group gives the fifth letter ‘Ma’. In the seventh sign (Libra), the seventh Navāṁśa lord is Mars, whose group gives the fifth letter ‘Ṅa’. In the tenth sign (Capricorn), the seventh Navāṁśa lord is the Moon, whose group gives the third letter ‘La’.

When the ascendant is in the eighth Navāṁśa, the lord of that Navāṁśa is Mars, whose group gives the first letter ‘Ka’. In the fourth sign (Cancer), the eighth Navāṁśa lord is Saturn, whose group gives the first letter ‘Pa’. In the seventh sign (Libra), the eighth Navāṁśa lord is Venus, whose group gives the first letter ‘Ca’. In the tenth sign (Capricorn), the eighth Navāṁśa lord is the Sun, whose group gives the third letter ‘I’. ‖18‖

Letter Arrangements in the Ninth Navāṁśa of Aries Ascendant

When the ascendant is in the ninth Navāṁśa, the lord of that Navāṁśa is Jupiter, whose group gives the fifth letter ‘Na’. In the fourth sign (Cancer), the ninth Navāṁśa lord is Jupiter, whose group gives the first letter ‘Ta’. In the seventh sign (Libra), the ninth Navāṁśa lord is Mercury, whose group gives the fifth letter ‘Ṇa’. In the tenth sign (Capricorn), the ninth Navāṁśa lord is Mercury, whose group gives the first letter ‘Ṭa’. This rule applies to the movable signs (Chara Rāśis); the rules for fixed signs (Sthira Rāśis) follow. ‖19‖

Letter Arrangements in the First Navāṁśa of Taurus Ascendant

When the ascendant is in the first Navāṁśa of Taurus (Vṛṣabha), the lord of that Navāṁśa is Saturn, whose group gives the second letter ‘Pha’. In the fourth sign (Leo), the first Navāṁśa lord is Mars, whose group gives the second letter ‘Kha’. In the seventh sign (Scorpio), the first Navāṁśa lord is the Moon, whose group gives the fourth letter ‘Va’. In the tenth sign (Aquarius),

the first Navāṁśa lord is Venus, whose group gives the second letter ‘Cha’. Thus, for all fixed signs, the arrangement of syllables should be made in this manner. ॥20॥

Letter Arrangements in the Second and Third Navāṁśas of Taurus Ascendant

When the ascendant is in the second Navāṁśa, the lord of that Navāṁśa is Saturn, whose group gives the third letter ‘Ba’. In the fourth sign (Leo), the second Navāṁśa lord is Venus, whose group gives the third letter ‘Ja’. In the seventh sign (Scorpio), the second Navāṁśa lord is the Sun, whose group gives the fourth letter ‘Ī’. In the tenth sign (Aquarius), the second Navāṁśa lord is Mars, whose group gives the third letter ‘Ga’.

When the ascendant is in the third Navāṁśa, the lord of that Navāṁśa is Jupiter, whose group gives the second letter ‘Tha’. In the fourth sign (Leo), the third Navāṁśa lord is Mercury, whose group gives the first letter ‘Ṭa’. In the seventh sign (Scorpio), the third Navāṁśa lord is Mercury, whose group gives the third letter ‘Ḍa’. In the tenth sign (Aquarius), the third Navāṁśa lord is Jupiter, whose group gives the third letter ‘Da’. ॥21॥

Letter Arrangements in the Fourth and Fifth Navāṁśas of Taurus Ascendant

When the ascendant is in the fourth Navāṁśa, the lord of that Navāṁśa is Mars, whose group gives the fourth letter ‘Gha’. In the fourth sign (Leo), the fourth Navāṁśa lord is the Moon, whose group gives the fifth letter ‘Śa’. In the seventh sign (Scorpio), the fourth Navāṁśa lord is Venus, whose group gives the fourth letter ‘Jha’. In the tenth sign (Aquarius), the fourth Navāṁśa lord is Saturn, whose group gives the fourth letter ‘Bha’.

When the ascendant is in the fifth Navāṁśa, the lord of that Navāṁśa is Venus, whose group gives the fifth letter ‘Ja’. In the fourth sign (Leo), the fifth Navāṁśa lord is the Sun, whose group gives the fifth letter ‘U’. In the seventh sign (Scorpio), the fifth Navāṁśa lord is Mars, whose group gives the fifth letter ‘Ṅa’. In the tenth sign (Aquarius), the fifth Navāṁśa lord is Saturn, whose group gives the fifth letter ‘Ma’. ॥22॥

Letter Arrangements in the Sixth and Seventh Navāṁśas of Taurus Ascendant

When the ascendant is in the sixth Navāṁśa, the lord of that Navāṁśa is Mercury, whose group gives the fourth letter ‘Ḍha’. In the fourth sign (Leo), the sixth Navāṁśa lord is Mercury, whose group gives the fifth letter ‘Ṇa’. In the seventh sign (Scorpio), the sixth Navāṁśa lord is Jupiter, whose group gives the fourth letter ‘Dha’. In the tenth sign (Aquarius), the sixth Navāṁśa lord is Jupiter, whose group gives the fifth letter ‘Na’.

When the ascendant is in the seventh Navāṁśa, the lord of that Navāṁśa is the Moon, whose group gives the sixth letter ‘Ṣa’. In the fourth sign (Leo), the seventh Navāṁśa lord is Venus, whose group gives the first letter ‘Ca’. In the seventh sign (Scorpio), the seventh Navāṁśa lord

is Saturn, whose group gives the first letter ‘Pa’. In the tenth sign (Aquarius), the seventh Navāṁśa lord is Mars, whose group gives the first letter ‘Ka’. ॥23॥

Letter Arrangements in the Eighth and Ninth Navāṁśas of Taurus Ascendant

When the ascendant is in the eighth Navāṁśa, the lord of that Navāṁśa is the Sun, whose group gives the sixth letter ‘Ū’. In the fourth sign (Leo), the eighth Navāṁśa lord is Mars, whose group gives the second letter ‘Kha’. In the seventh sign (Scorpio), the eighth Navāṁśa lord is Saturn, whose group gives the second letter ‘Pha’. In the tenth sign (Aquarius), the eighth Navāṁśa lord is Venus, whose group gives the second letter ‘Cha’.

When the ascendant is in the ninth Navāṁśa, the lord of that Navāṁśa is Mercury, whose group gives the first letter ‘Ṭa’. In the fourth sign (Leo), the ninth Navāṁśa lord is Jupiter, whose group gives the first letter ‘Ta’. In the seventh sign (Scorpio), the ninth Navāṁśa lord is Jupiter, whose group gives the second letter ‘Tha’. In the tenth sign (Aquarius), the ninth Navāṁśa lord is Mercury, whose group gives the second letter ‘Ṭha’. ॥24॥

Letter Arrangements in the First Navāṁśa of Gemini Ascendant

When the ascendant is in the first Navāṁśa of Gemini (Mithuna), the lord of that Navāṁśa is Venus, whose group gives the third letter ‘Ja’. In the fourth sign (Virgo), the first Navāṁśa lord is Saturn, whose group gives the third letter ‘Ba’. In the seventh sign (Sagittarius), the first Navāṁśa lord is Mars, whose group gives the third letter ‘Ga’. In the tenth sign (Pisces), the first Navāṁśa lord is the Moon, whose group gives the seventh letter ‘Sa’. ॥25॥

Letter Arrangements in the Second and Third Navāṁśas of Gemini Ascendant

When the ascendant is in the second Navāṁśa, the lord of that Navāṁśa is Mars, whose group gives the fourth letter ‘Gha’. In the fourth sign (Virgo), the second Navāṁśa lord is Saturn, whose group gives the fourth letter ‘Bha’. In the seventh sign (Sagittarius), the second Navāṁśa lord is Venus, whose group gives the fourth letter ‘Jha’. In the tenth sign (Pisces), the second Navāṁśa lord is the Sun, whose group gives the fourth letter ‘Ī’.

When the ascendant is in the third Navāṁśa, the lord of that Navāṁśa is Jupiter, whose group gives the third letter ‘Da’. In the fourth sign (Virgo), the third Navāṁśa lord is Jupiter, whose group gives the fourth letter ‘Dha’. In the seventh sign (Sagittarius), the third Navāṁśa lord is Mercury, whose group gives the third letter ‘Ḍa’. In the tenth sign (Pisces), the third Navāṁśa lord is Mercury, whose group gives the fourth letter ‘Ḍha’. ॥26॥

Letter Arrangements in the Fourth and Fifth Navāṁśas of Gemini Ascendant

When the ascendant is in the fourth Navāṁśa, the lord of that Navāṁśa is Saturn, whose group

gives the fifth letter ‘Ma’. In the fourth sign (Virgo), the fourth Navāṁśa lord is Mars, whose group gives the fifth letter ‘Ṅa’. In the seventh sign (Sagittarius), the fourth Navāṁśa lord is the Moon, whose group gives the eighth letter ‘Ha’. In the tenth sign (Pisces), the fourth Navāṁśa lord is Venus, whose group gives the fifth letter ‘Ña’.

When the ascendant is in the fifth Navāṁśa, the lord of that Navāṁśa is Saturn, whose group gives the first letter ‘Pa’. In the fourth sign (Virgo), the fifth Navāṁśa lord is Venus, whose group gives the first letter ‘Ca’. In the seventh sign (Sagittarius), the fifth Navāṁśa lord is the Sun, whose group gives the eighth letter ‘Ai’. In the tenth sign (Pisces), the fifth Navāṁśa lord is Mars, whose group gives the first letter ‘Ka’. ॥27॥

Letter Arrangements in the Sixth and Seventh Navāṁśas of Gemini Ascendant

When the ascendant is in the sixth Navāṁśa, the lord of that Navāṁśa is Jupiter, whose group gives the fifth letter ‘Na’. In the fourth sign (Virgo), the sixth Navāṁśa lord is Mercury, whose group gives the fifth letter ‘Ṇa’. In the seventh sign (Sagittarius), the sixth Navāṁśa lord is Mercury, whose group gives the first letter ‘Ṭa’. In the tenth sign (Pisces), the sixth Navāṁśa lord is Jupiter, whose group gives the first letter ‘Ta’.

When the ascendant is in the seventh Navāṁśa, the lord of that Navāṁśa is Mars, whose group gives the second letter ‘Kha’. In the fourth sign (Virgo), the seventh Navāṁśa lord is the Moon, whose group gives the first letter ‘Ya’. In the seventh sign (Sagittarius), the seventh Navāṁśa lord is Venus, whose group gives the second letter ‘Cha’. In the tenth sign (Pisces), the seventh Navāṁśa lord is Saturn, whose group gives the second letter ‘Pha’. ॥28॥

Letter Arrangements in the Eighth and Ninth Navāṁśas of Gemini Ascendant

When the ascendant is in the eighth Navāṁśa, the lord of that Navāṁśa is Venus, whose group gives the third letter ‘Ja’. In the fourth sign (Virgo), the eighth Navāṁśa lord is the Sun, whose group gives the ninth letter ‘O’. In the seventh sign (Sagittarius), the eighth Navāṁśa lord is Mars, whose group gives the third letter ‘Ga’. In the tenth sign (Pisces), the eighth Navāṁśa lord is Saturn, whose group gives the third letter ‘Ba’.

When the ascendant is in the ninth Navāṁśa, the lord of that Navāṁśa is Mercury, whose group gives the second letter ‘Ṭha’. In the fourth sign (Virgo), the ninth Navāṁśa lord is Mercury, whose group gives the third letter ‘Ḍa’. In the seventh sign (Sagittarius), the ninth Navāṁśa lord is Jupiter, whose group gives the second letter ‘Tha’. In the tenth sign (Pisces), the ninth Navāṁśa lord is Jupiter, whose group gives the third letter ‘Da’. ॥29॥

Explanation of Division and Method of Name Derivation

Thus, this is the comprehensive method of collecting the syllables for names. Some teachers prescribe the same procedure for all ascendants beginning from Aries. ॥30॥

Alternative Method of Name Derivation
By multiplying the number of Navāṁśas of each Kendra (angular house) sign with the letters of that sign's governing planet and dividing by nine, the remainder determines the letter according to the Navāṁśa lord. The sages state that Mars and the other four planets (Venus, Mercury, Jupiter, Saturn) each govern six Navāṁśas. Since there are nine letters in nine Navāṁśas, six Navāṁśas correspond to six letters. Thus, in movable signs, the first Navāṁśa yields the first letter of its group, the second yields the second, and so on, repeating after the sixth. Fixed and dual signs follow a similar cyclic pattern, adjusted for their order. ॥31॥

Application of the Method
This method is applied to derive names for contemplated actions, spoken desires, lost objects, wounds, women, unions, food, dreams, stars, thoughts, and men. The four Kendras—ascendant, fourth, seventh, and tenth houses—represent these successively. This concludes the Yavaneśvara's system of letter computation (Aksarakosha). ॥32॥

Names of the Querent and Visitor
If the ascendant and Navāṁśa are both movable, the querent's or visitor's name has two letters; if fixed, four letters; and if dual, two names—one of three and one of five letters. ॥33॥

Planetary Assignment of Letters
Mars, Venus, Mercury, Jupiter, and Saturn correspond respectively to Ka, Ca, Ṭa, Ta, and Pa groups; the Moon governs Ya, Ra, La, Va, Śa, Ṣa, Sa, and Ha; and the Sun governs vowels A through Au, including Anusvāra and Visarga. The Navāṁśa lords of the four Kendras (1st, 4th, 7th, 10th) yield syllables in sequence, from which names are constructed. Strong planets—those exalted, in their own sign, Navāṁśa, Dreṣkāṇa, or Kendra—double or triple their given syllable, while weak planets cause loss of their syllable.

If the ascendant or Navāṁśa lord is the Sun, the name is associated with Agni; if the Moon, with Ambu; Mercury with Viṣṇu; Jupiter with Indra; Venus with Indrāṇī; and Saturn with Brahmā. Names of two, three, or more syllables are then constructed as per these combinations.

Age Indicated by Planet Giving the Initial Letter
If the Moon gives the initial letter, it indicates an infant still nursing; if Mars, a small child; if Mercury, a student (brahmacārī); if Venus, a youth; if Jupiter, a middle-aged man; if the Sun, an elderly person; and if Saturn, one exceedingly old. ॥34॥

Chapter – 97

अथ पाकाध्यायः **(Adhyāya on the Maturity of Results)**

Time for the Fruition of Planetary Results
The Sun's results mature in a fortnight, the Moon's in a month, Mars's according to its retrogression, Mercury's until its next rise, Jupiter's in a year, Venus's in six months, and

Saturn's in a year. Rāhu produces results within six months during a lunar eclipse and within a year during a solar eclipse. The planets Tvāṣṭṛ, Tāmasa, and Kīlaka act immediately. Dhūmaketu produces results in three months, Śvetaketu in seven nights, and phenomena such as halos, rainbows, or unusual lights around the Sun and Moon yield effects within seven days. ॥1–3॥

Time of Results of Climatic and Seasonal Anomalies

When cold and heat are reversed—cold in summer or heat in winter—or when fruits and flowers

Chapter – 98

अथ नक्षत्रकर्मगुणाध्यायः **(Adhyāya on the Qualities and Prescribed Actions of the Nakṣatras)**

Number of Stars in Each Nakṣatra

The stars (tārās) within the Nakṣatras beginning from Aśvinī are as follows: Aśvinī – 3 stars, Bharanī – 3, Kṛttikā – 6, Rohiṇī – 5, Mṛgaśirā – 3, Ārdrā – 1, Punarvasu – 4, Puṣya – 3, Āśleṣā – 5, Maghā – 5, Pūrva Phālgunī – 2, Uttara Phālgunī – 2, Hasta – 5, Citrā – 1, Svātī – 1, Viśākhā – 4, Anurādhā – 4, Jyeṣṭhā – 3, Mūla – 11, Pūrvāṣāḍhā – 2, Uttarāṣāḍhā – 2, Abhijit – 3, Śravaṇa – 3, Dhaniṣṭhā – 4, Śatabhiṣā – 100, Pūrvabhādrapadā – 2, Uttarabhādrapadā – 2, and Revatī – 32.

The results of the Nakṣatras depend on the number of their stars. For example, in marriage, the auspicious or inauspicious effects of a Nakṣatra manifest in years equal to the number of its stars. Likewise, if a fever or ailment begins under a Nakṣatra, it subsides in days equal to the number of that Nakṣatra's stars.

Lords of the Nakṣatras

The deities presiding over the Nakṣatras, beginning from Aśvinī, are: the Aśvinī Kumāras, Yama, Agni, Brahmā, Candra (Moon), Śiva, Aditi, Bṛhaspati, Sarpas (Serpents), Bhaga (a solar deity), Aryamā (solar aspect), Ravi (Sun), Tvaṣṭā (Viśvakarmā), Vāyu (Wind), Indrāgni (Indra and Fire), Mitra, Indra, Nirṛti (a Rākṣasa), Jala (Water), Viśvedevas, Brahmā, Viṣṇu, Vasus, Varuṇa, Aja Ekapād (solar form), Ahirbudhnya (solar form), and Pūṣan (solar form). Thus, Aśvinī Kumāras are lords of Aśvinī, Yama of Bharanī, Agni of Kṛttikā, Brahmā of Rohiṇī, Candra of Mṛgaśirā, and so on. ॥4–5॥

Dhruva (Fixed) Nakṣatras and Their Appropriate Actions

Among the previously mentioned Nakṣatras, Rohiṇī and the three Uttaras (Uttara Phālgunī, Uttaraṣāḍhā, and Uttarabhādrapadā) are called Dhruva, or fixed. In these Nakṣatras, one

should perform acts such as royal consecrations, peace rituals (Śānti), planting of trees, founding of cities, religious works, sowing of seeds, and all undertakings of permanent nature.

Tīkṣṇa (Fierce) Nakṣatras and Their Appropriate Actions
Mūla, Ārdrā, Jyeṣṭhā, and Āśleṣā are Tīkṣṇa Nakṣatras. They are suitable for acts involving destruction, incantations, invocation of spirits, bondage, slaying, separation, and royal petitions.

Ugra (Terrible) Nakṣatras and Their Appropriate Actions
Bharaṇī, Maghā, and Pūrva Phālgunī are Ugra Nakṣatras. They are suitable for acts of destruction, enmity, poison usage, burning, weaponry, and battle.

Laghu (Light) Nakṣatras and Their Appropriate Actions
Hasta, Aśvinī, and Puṣya are Laghu Nakṣatras. They favor trade, pleasure, learning, arts, music, dance, craftsmanship, medicine, and travel.

Mṛdu (Gentle) Nakṣatras and Their Appropriate Actions
Anurādhā, Citrā, Revatī, and Mṛgaśirā are Mṛdu Nakṣatras. They are auspicious for friendship, union, garments, ornaments, marriage, and musical endeavors.

Mṛdu–Tīkṣṇa (Mixed) and Cara (Movable) Nakṣatras
Kṛttikā and Viśākhā are Mṛdu–Tīkṣṇa Nakṣatras, yielding mixed results suitable for both gentle and harsh undertakings. Śravaṇa, Dhaniṣṭhā, Śatabhiṣā, Punarvasu, and Svātī are Cara Nakṣatras, favorable for travel and all moving activities.

Nakṣatras Suitable for Tonsure (Kṣaura Karma)
Tonsure is auspicious when performed during or at the rise of the Nakṣatras Hasta, Citrā, Svātī, Mṛgaśirā, Śravaṇa, Dhaniṣṭhā, Śatabhiṣā, Revatī, Aśvinī, Jyeṣṭhā, Puṣya, and Punarvasu, or during the Muhūrta associated with their deities (for instance, at sunrise during Hasta Nakṣatra, whose deity is the Sun). The Moon and stars should be in favorable positions. ॥12॥

Times When Tonsure Should Be Avoided
Tonsure is inauspicious immediately after bathing, before a journey, after oil application, during warfare, without a seat, at twilight, at night, on Saturdays, Tuesdays, Sundays, during void (Riktā) lunar days, on the ninth day, or during Viṣṭi Karaṇa.

Universal Exception for Tonsure
However, tonsure is auspicious under all Nakṣatras when performed by royal order, with the consent of Brāhmaṇas, during marriage, at the end of mourning or impurity, at release from captivity, or during initiation for sacrifice. ॥14॥

Nakṣatras for Masculine Activities
Hasta, Mūla, Śravaṇa, Punarvasu, Mṛgaśirā, and Puṣya are masculine Nakṣatras, favorable for activities relating to men. ॥15॥

Nakṣatras for Naming and Sacred Rites
Hasta, Revatī, Svātī, Anurādhā, Puṣya, Citrā, and Mṛgaśirā are auspicious for rites such as

naming, initiation, and thread ceremony, especially when occurring on Fridays, Wednesdays, Mondays, or Thursdays. ॥16॥

Purification of the Ascendant for All Activities
If benefic planets occupy the twelfth, angular, and eighth houses from the ascendant, and malefics are in the third, sixth, or eleventh houses, with Jupiter or Venus in the ascendant or in any Kendra, success in all undertakings is ensured. Construction and house entry are auspicious when the ascendant falls in the native's birth sign, a sign belonging to inhabited constellations (Meṣa, Mithuna, Kanyā, Tulā, Dhanu, or Kumbha), or a fixed sign (Siṁha or Vṛścika).

Chapter – 99

अथ तिथिकर्मगुणाध्यायः **(Adhyāya on the Qualities and Prescribed Actions of the Lunar Days – Tithis)**

Lords of the Tithis
Brahmā, Vidhātā, Viṣṇu, Yama, Candra, Kārtikeya, Indra, the Vasus, the Serpents, Dharma, Śiva, Sūrya, Kāmadeva, and Kali are the lords of the fifteen Tithis from Pratipadā onward. Thus, Brahmā rules Pratipadā, Vidhātā rules Dvitīyā, Viṣṇu rules Tṛtīyā, and so on, with the Pitṛs presiding over Amāvasyā.

Each Tithi yields results corresponding to its deity: Pratipadā suits sacred and creative acts, Dvitīyā for building, Tṛtīyā for tonsure and initiation, Caturthī for overcoming enemies, Pañcamī for medicinal use, Ṣaṣṭhī for consecrations, Saptamī for travel and vehicles, Aṣṭamī for defense and armaments, Navamī for destruction and warfare, Daśamī for religious rites and offerings, Ekādaśī for gentle and holy acts, Dvādaśī for fire rituals, Trayodaśī for friendship and union, Caturdaśī for works involving poisons and elixirs, and Paurnimā for ancestor offerings.

Classification of Tithis
Tithis are of five types—Nandā (1st, 6th, 11th), Bhadrā (2nd, 7th, 12th), Vijayā (3rd, 8th, 13th), Riktā (4th, 9th, 14th), and Pūrṇā (5th, 10th, 15th).

Correspondence Between Nakṣatra Deities and Tithis
The action prescribed under each Nakṣatra should be performed under the Tithi of its presiding deity. For example, works suited to Rohiṇī (whose deity is Brahmā) should be done on Pratipadā, those of Abhijit on Dvitīyā, Śravaṇa on Tṛtīyā, Bharaṇī on Caturthī, Mṛgaśirā on Pañcamī, Kṛttikā on Ṣaṣṭhī, Jyeṣṭhā on Saptamī, Hasta on Dvādaśī, Pūrva Phālgunī on Caturdaśī, Uttarāṣāḍhā on Paurnimā, and Maghā on Amāvasyā.

Correspondence with Karaṇas and Muhūrtas
Similarly, each Nakṣatra's prescribed act should also be performed in the Karaṇa and Muhūrta ruled by its deity—for instance, in Jyeṣṭhā during Vaṇija Karaṇa, in Rohiṇī during Bālava, in

Anurādhā during Kaulava, in Uttarā Phālgunī during Taitila, and so on. In terms of Muhūrtas, works of Ārdrā should be done in Śiva Muhūrta, those of Śleṣā in Bhujaga, Anurādhā in Mitra, Maghā in Pitṛ, Dhaniṣṭhā in Vasu, Pūrvāṣāḍhā in Jala, Uttarāṣāḍhā in Viśva, Abhijit in Virachi, Rohiṇī in Paṅkaja, Viśākhā in Aindrāgni, Mūla in Nirṛti, Śatabhiṣā in Vāruna, Uttarā Phālgunī in Aryamā, Pūrvā Phālgunī in Bhāgya, Pūrvabhādrapadā in Ajaikapād, Uttarabhādrapadā in Ahirbudhnya, Revatī in Pūṣan, Aśvinī in Dasra, Bharaṇī in Antaka, Kṛttikā in Āgneyī, Mṛgaśirā in Indu, Punarvasu in Aditi, Puṣya in Guru, Śravaṇa in Hari, Hasta in Ravi, Citrā in Tvaṣṭā, and Svātī in Anila Muhūrta.

Chapter – 100

अथ करणगुणाध्यायः **(Adhyāya on the Qualities and Results of Karaṇas)**

Names and Lords of the Seven Movable Karaṇas
The seven movable Karaṇas are Bava, Bālava, Kaulava, Taitila, Gara, Vaṇija, and Viṣṭi. Their respective lords are Indra, Brahmā, Mitra, Aryamā, Bhūmi, Lakṣmī, and Yama. ॥1॥

Names and Lords of the Four Fixed Karaṇas
Śakuni, Nāga, Catuṣpada, and Kiṁstugna are the four fixed Karaṇas, ruled respectively by Kali, Vṛṣa, Sarpa, and Pavana. ॥2॥

Results of the Movable Karaṇas
In Bava Karaṇa, auspicious, movable, stable, and nourishing activities are favorable. In Bālava, religious and charitable acts should be done. In Kaulava, affection, friendship, and marriage are auspicious. In Taitila, good fortune, shelter, and house-related acts bring success. In Gara, farming, sowing, and hermitage activities are best. In Vaṇija, business and stable associations are successful. In Viṣṭi, no work is auspicious except destruction of enemies, use of poison, or acts involving fire. ॥3–4॥

Results of the Fixed Karaṇas
In Śakuni Karaṇa, medicinal, nourishing, and mantra-related works bring success. In Catuṣpada, works connected with cows, Brāhmaṇas, ancestors, and the state are favorable. In Nāga, works related to permanence, harshness, capture, and rivalry yield results. In Kiṁstugna, acts related to religion, sacrifice, nourishment, marriage, and fulfillment succeed.

Auspicious Time for Ear-Piercing (Karṇavedha)
When benefic planets occupy the third and eleventh houses from the ascendant, when benefic signs (Taurus, Gemini, Virgo, Libra, Sagittarius, Pisces) rise, when the ascendant is free from malefics and conjoined with Jupiter, and when the Nakṣatra is Puṣya, Mṛgaśirā, Citrā, Śravaṇa, or Revatī, the ear-piercing ceremony is auspicious. ॥6॥

Brief Rules for Marriage
Marriage is auspicious under Rohiṇī, the three Uttaras, Revatī, Mṛgaśirā, Mūla, Anurādhā,

Maghā, Hasta, or Svātī Nakṣatras; with ascendants in Virgo, Libra, or Gemini; when benefic planets are in the seventh, eighth, or twelfth from the ascendant; when the Moon occupies the eleventh, second, or third houses; when malefics are in the third, sixth, or eleventh; when Venus is not in the sixth and Mars not in the eighth; and when neither Vyatipāta nor lightning Yogas, Viṣṭi Karaṇa, Riktā Tithis, inauspicious weekdays, Dakṣiṇāyana, nor the months of Caitra or Pauṣa are present.

Marriage should be performed in human (biped) ascendants—Gemini, Virgo, and Libra. The mention of Pauṣa's inauspiciousness merely reiterates its position under Dakṣiṇāyana; thus, Pauṣa is avoided because Dakṣiṇāyana itself is avoided. The Achārya's intent is that marriages should be done in Kārttika and Mārgaśīrṣa (of Dakṣiṇāyana) and avoided in Caitra (of Uttarāyana).

Chapter – 101

अथ नक्षत्रजातकाध्यायः **(Adhyāya on the Birth Results of the Nakṣatras)**

Birth under Aśvinī and Bharanī Nakṣatras

A person born under Aśvinī Nakṣatra loves adornments, is handsome, beloved by all, skillful in every task, and intelligent. One born under Bharanī accomplishes whatever he begins, speaks truth, remains healthy, clever, and content.

Birth under Kṛttikā and Rohiṇī Nakṣatras

Born under Kṛttikā, one eats much, indulges in others' wives, is fiery, and renowned. Under Rohiṇī, one is truthful, pure, gentle in speech, steady-minded, and beautiful.

Birth under Mṛgaśirā and Ārdrā Nakṣatras

Those born under Mṛgaśirā are restless, intelligent, fearful, skillful, wealthy, and fond of pleasures. Those under Ārdrā are deceitful, proud, destructive, cruel to living beings, and sinful.

Birth under Punarvasu Nakṣatra

A native born under Punarvasu controls his senses, is happy, mild-natured, yet sometimes dull, diseased, and easily satisfied.

Birth under Puṣya and Āśleṣā Nakṣatras

Puṣya natives are calm, beloved, learned, wealthy, and virtuous. Āśleṣā natives are deceitful, gluttonous, sinful, and destroy others' works.

Birth under Maghā and Pūrva Phālgunī Nakṣatras

Maghā natives are wealthy, served by many attendants, devoted to deities and ancestors, and industrious. Pūrva Phālgunī natives are sweet-spoken, generous, radiant, fond of travel, and serve rulers.

Birth under Uttara Phālgunī and Hasta Nakṣatras

Uttara Phālgunī natives are beloved, earn wealth through learning, enjoy pleasures, and are

content. Hasta natives are energetic, talented, shameless, fond of liquor, merciless, and thievish.

Birth under Citrā and Svātī Nakṣatras

Citrā natives wear colorful garments and garlands, possess charming eyes, and are graceful. Svātī natives are self-controlled, merciful, polite, and prosperous through trade.

Birth under Viśākhā and Anurādhā Nakṣatras

Viśākhā natives are envious of others' progress, bright, eloquent, and quarrelsome. Anurādhā natives are wealthy, often travel abroad, suffer from hunger, and are wanderers.

Birth under Jyeṣṭhā and Mūla Nakṣatras

Jyeṣṭhā natives have few friends, are content, religious, and quick-tempered. Mūla natives are proud, wealthy, steady-minded, free from cruelty, and pleasure-loving.

Birth under Pūrvāṣāḍhā and Uttarāṣāḍhā Nakṣatras

Pūrvāṣāḍhā natives are accompanied by loving wives, proud, and blessed with good friends. Uttarāṣāḍhā natives are humble, religious, grateful, and beloved of all.

Birth under Śravaṇa and Dhaniṣṭhā Nakṣatras

Śravaṇa natives are learned, wealthy, generous, and devoted to virtuous women. Dhaniṣṭhā natives are charitable, rich, fond of music, and somewhat greedy.

Birth under Śatabhiṣā and Pūrvabhādrapadā Nakṣatras

Śatabhiṣā natives are bold, outspoken, indulgent in many habits, destroyers of enemies, and hard to subdue. Pūrvabhādrapadā natives are sorrowful, ruled by women, wealthy, learned, yet miserly.

Birth under Uttarabhādrapadā and Revatī Nakṣatras

One born under Uttarabhādrapadā is eloquent, happy, blessed with children, victorious over enemies, and devoted to righteousness. One born under Revatī is well-formed in all limbs, beloved by all, brave, pure, and wealthy.

Results of Nakṣatra Birth According to Other Texts

In other treatises, the results of birth in each quarter (pāda) of the Nakṣatras are described as follows:

In Aśvinī Nakṣatra — born in the first quarter, a thief; in the second, lazy in work; in the third, loved by all; in the fourth, long-lived.

In Bharanī — first quarter, renunciate; second, pleasure-seeking; third, sinful; fourth, poor.

In Kṛttikā — first quarter, brilliant; second, learned in scriptures; third, valiant; fourth, blessed with children.

In Rohiṇī — first quarter, fortunate; second, afflicted; third, fearful; fourth, truthful.
In Mṛgaśirā — first quarter, kingly; second, thievish; third, indulgent; fourth, blessed with wealth and grain.
In Ārdrā — first quarter, spendthrift; second, poor; third, short-lived; fourth, a thief.
In Punarvasu — first quarter, happy; second, learned; third, diseased; fourth, false-tongued.
In Puṣya — first quarter, long-lived; second, a thief; third, pleasure-loving; fourth, wealthy.
In Āśleṣā — first quarter, childless; second, servant; third, diseased; fourth, unfortunate.
In Maghā — first quarter, sonless; second, blessed with sons; third, sickly; fourth, learned.
In Pūrva Phālgunī — first quarter, capable; second, devout; third, royal; fourth, short-lived.
In Uttara Phālgunī — first quarter, learned; second, kingly; third, victorious; fourth, virtuous.
In Hasta — first quarter, brave; second, eloquent; third, diseased; fourth, prosperous.
In Citrā — first quarter, thief; second, artist; third, adulterous; fourth, afflicted in the feet.
In Svātī — first quarter, thief; second, short-lived; third, righteous; fourth, royal.
In Viśākhā — first quarter, just; second, learned; third, eloquent; fourth, long-lived.
In Mūla — first quarter, pleasure-loving; second, renunciate; third, blessed with good friends; fourth, royal.
In Pūrvāṣāḍhā — first quarter, noble-minded; second, royal; third, beloved by all; fourth, musician.
In Uttarāṣāḍhā — first quarter, royal; second, having bad friends; third, proud; fourth, virtuous.
In Śravaṇa — all quarters are auspicious.
In Pūrvabhādrapadā — first quarter, brave; second, thief; third, wise; fourth, low-born.
In Uttarabhādrapadā — first quarter, royal; second, thief; third, blessed with sons; fourth, free from sorrow.
In Revatī — first quarter, wise; second, thief; third, victorious; fourth, troubled in battle.

The text from which this enumeration is drawn omits the results for Dhaniṣṭhā, Anurādhā, Jyeṣṭhā, and Śatabhiṣā Nakṣatras, and thus they are not included here. ॥14॥

Chapter – 102

अथ राशिविभागाध्यायः **(Adhyāya on the Division of Nakṣatras among the Zodiac Signs)**

Division of Nakṣatras in Aries and Taurus Signs
The four quarters of Aśvinī, the four of Bharanī, and the first quarter of Kṛttikā fall under Aries (Meṣa). The remaining three quarters of Kṛttikā, the four of Rohiṇī, and the first two of Mṛgaśirā belong to Taurus (Vṛṣabha). ॥1॥

Division in Gemini and Cancer Signs
The last two quarters of Mṛgaśirā, the four of Ārdrā, and the first three of Punarvasu fall under Gemini (Mithuna). The last quarter of Punarvasu, the four of Puṣya, and the four of Āśleṣā belong to Cancer (Karkaṭa). ॥2॥

Division in Leo and Virgo Signs
The four quarters of Maghā, the four of Pūrva Phālgunī, and the first quarter of Uttara Phālgunī belong to Leo (Siṁha). The remaining three quarters of Uttara Phālgunī, the four of Hasta, and the first two of Citrā fall under Virgo (Kanyā). ॥3॥

Division in Libra and Scorpio Signs
The last two quarters of Citrā, the four of Svātī, and the first three of Viśākhā fall under Libra (Tulā). The remaining quarter of Viśākhā, the four of Anurādhā, and the four of Jyeṣṭhā belong to Scorpio (Vṛścika). ॥4॥

Division in Sagittarius and Capricorn Signs
The four quarters of Mūla, the four of Pūrvāṣāḍhā, and the first quarter of Uttarāṣāḍhā fall under Sagittarius (Dhanu). The remaining three quarters of Uttarāṣāḍhā, the four of Śravaṇa, and the first two of Dhaniṣṭhā belong to Capricorn (Makara). ॥5॥

Division in Aquarius and Pisces Signs
The last two quarters of Dhaniṣṭhā, the four of Śatabhiṣā, and the first three of Pūrvabhādrapadā belong to Aquarius (Kumbha). The remaining quarter of Pūrvabhādrapadā, the four of Uttarabhādrapadā, and the four of Revatī belong to Pisces (Mīna). ॥6॥

Summary of Nakṣatra Division Among Signs
Aries, Leo, and Sagittarius begin respectively with Aśvinī, Maghā, and Mūla Nakṣatras. The odd Nakṣatras (Kṛttikā, Mṛgaśirā, Punarvasu, and Āśleṣā) conclude each sign after adding one quarter. ॥7॥

Chapter – 103

अथ विवाहपटलाध्यायः **(Adhyāya on the Marriage Chart and Results of Planetary Positions)**

Results of Planets in the Ascendant at the Time of Marriage
If at the time of marriage the ascendant holds the Sun or Mars, the wife becomes widowed; if Rāhu, childless; if Saturn, poor; if Venus, Mercury, or Jupiter, virtuous; and if the Moon, short-lived. ॥1॥

Planets in the Second House
If the second house from the ascendant contains the Sun, Saturn, Rāhu, or Mars, the wife suffers constant poverty and distress. If Jupiter, Venus, or Mercury occupy it, she becomes wealthy and fortunate; if the Moon, she is fertile. ॥2॥

Planets in the Third House
If the third house contains the Sun, Moon, Mars, Jupiter, Venus, or Mercury, the wife has many children and wealth; if Saturn, she is renowned and fortunate; if Rāhu, she meets an untimely death. ॥3॥

Planets in the Fourth House

If Saturn is in the fourth house, the wife has little milk; if the Sun or Moon, she lacks fortune; if Rāhu, she has co-wives; if Mars, she is poor; and if Venus, Jupiter, or Mercury, she is happy and enjoys pleasures. ॥4॥

Planets in the Fifth House

If the Sun or Mars occupy the fifth house, the wife loses her children; if Mercury, Jupiter, or Venus, she bears many; if Rāhu, she dies; if Saturn, she suffers chronic disease; if the Moon, she loses her daughter early. ॥5॥

Planets in the Sixth House

If Saturn, Sun, Rāhu, Jupiter, or Mars occupy the sixth house, the wife serves her father-in-law; if the Moon, she becomes a widow; if Venus, poor; if Mercury, quarrelsome though wealthy. ॥6॥

Planets in the Seventh House

If Saturn, Mars, Jupiter, Mercury, Rāhu, Sun, Moon, or Venus occupy the seventh, they cause respectively widowhood, imprisonment, loss of wealth, disease, exile, and death. ॥7॥

Planets in the Eighth House

If Jupiter or Mercury are in the eighth house, separation from husband results; if the Moon, Venus, or Rāhu, death; if the Sun, prosperity; if Mars, illness; if Saturn, wealth and love from husband. ॥8॥

Planets in the Ninth House

If Venus, Sun, Mars, or Jupiter occupy the ninth, the wife is religious; if Mercury, healthy; if Rāhu or Saturn, barren; if the Moon, mother of daughters and fond of travel. ॥9॥

Planets in the Tenth House

If Rāhu occupies the tenth, widowhood results; if the Sun or Saturn, sinful conduct; if Mars, death; if the Moon, poverty and unchastity; if Mercury, Jupiter, or Venus, wealth and good fortune. ॥10॥

Planets in the Eleventh House

If the Sun is in the eleventh, many sons; the Moon, wealth; Mars, progeny; Saturn, riches; Jupiter, longevity; Mercury, wealth; Rāhu, faithful husband; Venus, prosperity. ॥11॥

Planets in the Twelfth House

If Jupiter occupies the twelfth, the wife is wealthy; if the Sun, poor; if the Moon, extravagant; if Rāhu, unchaste; if Venus, virtuous; if Mercury, mother of many sons; if Saturn or Mars, fond of liquor. ॥12॥

Auspiciousness of the Twilight Hour (Godhūlī Kāla)

The dust raised by the hooves of cows driven home by herdsmen at dusk brings wealth, sons, health, and good fortune to brides. At that time, consideration of Nakṣatra, Tithi, Karaṇa, Lagna, or Yoga is unnecessary. That cow-dust hour is declared to destroy all sins and is especially favorable for marriages and auspicious undertakings. ॥13॥

Chapter – 104

अथ ग्रहगोचराध्यायः **(Adhyāya on Planetary Transits and Their Results)**

Explanation of Gaṇa in Verse Composition
A Gaṇa composed of three long syllables is *Magana*; of three short, *Nagana*; with a long followed by two shorts, *Bhagana*; with a short followed by two longs, *Yagana*; with a long in the middle, *Jagana*; with a short in the middle, *Ragana*; with a long at the end, *Sagana*; and with a short at the end, *Tagana*.

Notation of Guru (long) and Laghu (short)
A curved line denotes Guru (long), a straight line denotes Laghu (short). One long syllable is called 'Ga,' one short 'La.'

Purpose of the Discussion
Just as old jewels with holes can be beautifully adorned when restrung with new threads, so also ancient texts, even if imperfect in structure, become refined when joined with new compositions and proper metres.

Reason for Writing the Transit Chapter
Since the topic of planetary transits (Grahagochara) is frequently applied in human life, the author proceeds to describe their results through various metres, humbly seeking forgiveness from the learned for any imperfections in speech.

Results of Planetary Transits (in Śārdūla Vikrīḍita Metre)
When from the natal sign the Sun transits the sixth, third, or tenth, it gives success; the Moon, the third, tenth, sixth, seventh, or first; Jupiter, the seventh, ninth, second, or fifth; Mars and Saturn, the sixth or third; Mercury, the sixth, second, fourth, tenth, or eighth; and all planets are auspicious in the eleventh. Venus in the seventh, sixth, or tenth behaves like a lion, producing anxiety.

Results of the Sun's Transit (in Stragdhara Metre)
When the Sun transits the natal sign, it causes disease, loss of wealth, abdominal ailments, and travel. In the second, loss of wealth and sight, sorrow, and destruction of undertakings; in the third, gain of position, prosperity, happiness, and victory over enemies; in the fourth, disease and obstruction in pleasures and union with women.

Results of the Sun in the Fifth to Eighth Signs (in Suvadana Metre)
When the Sun is in the fifth, it brings disease and distress; in the sixth, removal of ailments and enemies; in the seventh, travel and indigestion; in the eighth, sickness and fear, and the wife speaks unpleasantly.

Results of the Sun in the Ninth to Twelfth Signs (in Suvṛtta Metre)
In the ninth, adversity, poverty, and obstacles through expenses; in the tenth, success through

difficulty; in the eleventh, victory, gain, and honor; in the twelfth, the virtuous prosper, while the wicked fail.

Results of the Moon's Transit (in Śikharinī and Mandākrāntā Metres)

If the Moon is in the natal sign, it grants food, fine garments, and comforts. In the second, loss of wealth and hindrance; in the third, gain of garments, wealth, victory, and joy; in the fourth, suspicion like a serpent on a mountain.

In the fifth, disease, sorrow, and delay; in the sixth, prosperity and destruction of enemies; in the seventh, acquisition of conveyances, worship, bedding, and food; in the eighth, danger and fear to all, as a serpent terrifies without effort.

Results of the Moon's Transit in the Ninth to Twelfth Signs (in Vṛṣabhacarita Metre)

When the Moon transits the ninth sign from birth, it brings bondage, mental unrest, distress, and stomach ailments. In the tenth, it gives authority and accomplishment in works. In the eleventh, it grants increase of wealth, association with friends, and joy through riches. In the twelfth, it causes loss of wealth and harm from oxen's horns or hooves. This is the *Vṛṣabhacarita* metre.

Results of Mars in the Birth and Second Signs (in Upendravajrā Metre)

If Mars is in the natal sign, he brings trouble; in the second, he causes royal displeasure, quarrels, enmity, afflictions by metals, fire, thieves, and diseases, striking even the strongest of men. This is the *Upendravajrā* metre.

Results of Mars in the Third Sign (in Upajāti Metre)

When Mars occupies the third sign, he brings gains through youths and servants, profit in commands, wealth, woolen garments, and other materials derived from mines. This is the *Upajāti* metre.

Results of Mars in the Fourth Sign (in Prasabha Metre)

If Mars is in the fourth sign, he causes fever, stomach disorders, blood ailments, and misfortune through association with ignoble persons. This is the *Prasabha* metre.

Results of Mars in the Fifth Sign (in Mālatī Metre)

If Mars is in the fifth sign, he brings grief through enemies, disease, anger, fear, and sorrow from sons. Just as the Mālatī flower does not remain long upon a monkey's head, so too does this person's splendor not remain stable. This is the *Mālatī* metre.

Results of Mars in the Sixth Sign (in Aparavaktrā Metre)

If Mars is in the sixth sign, the native is free from fear and conflict, gains gold, coral, and copper, and never has to see the hostile expressions of others. This is the *Aparavaktrā* metre.

Results of Mars in the Seventh to Ninth Signs (in Vilambitagati Metre)
Mars in the seventh sign brings conflict with women, eye and stomach diseases; in the eighth, he causes bleeding, loss of wealth and honor; in the ninth, he produces downfall, loss of means, debility, and wasting of vital fluids, making the native slow and weak. This is the *Vilambitagati* metre.

Results of Mars in the Tenth and Eleventh Signs (in Supuṣpitāgra Metre)
If Mars is in the tenth sign, the result is moderate; in the eleventh, the person gains much wealth and victory, and enjoys pleasures like a bee delighting among blossoming trees. This is the *Supuṣpitāgra* metre.

Results of Mars in the Twelfth Sign (in Indravaṃśā Metre)
When Mars is in the twelfth sign, even a man born in a noble line suffers much expenditure, affliction, anger toward women, bile, and eye diseases. This is the *Indravaṃśā* metre.

Results of Mercury in the Natal Sign (in Svāgatā Metre)
If Mercury is in the natal sign, the native becomes harsh in speech, gossiping, quarrelsome, and loses wealth through discord. Even at his arrival, no one greets him with glad tidings. This is the *Svāgatā* metre.

Results of Mercury in the Second and Third Signs (in Drutapada Metre)
If Mercury is in the second sign, there is disrespect but gain of wealth; in the third, one gains through friends yet flees from enemies and rulers due to his own misconduct. This is the *Drutapada* metre.

Results of Mercury in the Fourth and Fifth Signs (in Rucirā Metre)
Mercury in the fourth sign brings prosperity to relatives and increase in wealth. In the fifth, quarrel with wife and children, and even with agitation, loss of conjugal happiness. This is the *Rucirā* metre.

Results of Mercury in the Sixth to Eighth Signs (in Praharṣaṇīya Metre)
If Mercury is in the sixth, he brings fortune, victory, and progress; in the seventh, quarrels and paleness; in the eighth, gain of victory, sons, garments, and wealth, and delighting cleverness. This is the *Praharṣaṇīya* metre.

Results of Mercury in the Ninth and Tenth Signs (in Dodhaka Metre)
Mercury in the ninth sign causes obstacles; in the tenth, he destroys enemies, grants wealth, wife, fine bed, splendid house, and pleasant conversations. This is the *Dodhaka* metre.

Results of Mercury in the Eleventh and Twelfth Signs (in Mālinī Metre)
Mercury in the eleventh gives wealth, sons, happiness, wife, friends, and vehicles, making one content and sweet-spoken. In the twelfth, he causes afflictions from enemies, disrespect, and disease, and denies union with adorned women. This is the *Mālinī* metre.

Results of Jupiter in the Natal and Second Signs (in Bhramaravilasitā Metre)
Jupiter in the natal sign causes loss of wealth, intellect, and position, and many hostilities. In

the second sign, he grants riches, peace, and joy in the face of one's wife, like a bee sporting on a lotus. This is the *Bhramaravilasitā* metre.

Results of Jupiter in the Third and Fourth Signs (in Mattamayūra Metre)
Jupiter in the third brings loss of position and affliction of works. In the fourth, he causes various troubles and anxiety from relatives, finding no peace either in villages or among forests filled with peacocks. This is the *Mattamayūra* metre.

Results of Jupiter in the Fifth Sign (in Maṇiguṇanikara Metre)
Jupiter in the fifth gives wealth, piety, sons, elephants, horses, and cattle, as well as gold, houses, women, garments, and heaps of jewels. This is the *Maṇiguṇanikara* metre.

Results of Jupiter in the Sixth Sign (in Hariṇapluta Metre)
Jupiter in the sixth causes sorrow, and even the sight of beautiful groves, peacocks, and deer fails to bring joy. The face of the beloved no longer shines with happiness. This is the *Hariṇapluta* metre.

Results of Jupiter in the Seventh Sign (in Lalitapada Metre)
If Jupiter is in the seventh, he brings pleasures of bed, union, wealth, food, conveyances, elegant speech, and refined intellect. This is the *Lalitapada* metre.

Results of Jupiter in the Eighth and Ninth Signs (in Śālinī Metre)
If Jupiter is in the eighth, he causes bondage, suffering, grief, sorrow, travel hardships, and near-fatal diseases. In the ninth, he brings mastery, commands, sons, success in works, and fertile lands. This is the *Śālinī* metre.

Results of Jupiter in the Tenth to Twelfth Signs (in Rathoddhatā Metre)
Jupiter in the tenth causes loss of position, health, and wealth; in the eleventh, gives gains of position, health, and prosperity; in the twelfth, even when riding a chariot, one suffers sorrow from straying off the right path. This is the *Rathoddhatā* metre.

Results of Venus in the Natal Sign (in Vilāsinī Metre)
Venus in the natal sign grants luxuries of love—beds, ornaments, perfumes, music, dance, and garlands. The native delights like a bee on the face of an intoxicated beauty. This is the *Vilāsinī* metre.

Results of Venus in the Second Sign (in Vasantatilakā Metre)
Venus in the second brings progeny, wealth, grains, royal favor, and happiness among relatives, adorned with flowers and jewels, serving love like Kāma himself. This is the *Vasantatilakā* metre.

Results of Venus in the Third and Fourth Signs (in Indravajrā Metre)
In the third, Venus bestows authority, wealth, honor, and prosperity, and destroys enemies. In the fourth, he brings companionship of friends and power like that of Śiva or Indra. This is the *Indravajrā* metre.

Results of Venus in the Fifth Sign (in Anavasitā Metre)
Venus in the fifth gives great contentment, sons, relatives, and wealth, but causes instability among enemy ranks. This is the *Anavasitā* metre.

Results of Venus in the Sixth to Eighth Signs (in Lakṣmī Metre)
In the sixth, Venus causes disrespect, disease, and sorrow; in the seventh, misfortune through women; in the eighth, gain of homes, garments, and union with a prosperous lady. This is the *Lakṣmī* metre.

Results of Venus in the Ninth and Tenth Signs (in Pramitākṣarā Metre)
Venus in the ninth brings virtue, women, comfort, wealth, and garments. In the tenth, despite measured speech, one faces humiliation and disputes. This is the *Pramitākṣarā* metre.

Results of Venus in the Eleventh and Twelfth Signs (in Sthira Metre)
Venus in the eleventh gives wealth, friends, food, and perfumes; in the twelfth, gains of garments and riches, though garments do not remain long. This is the *Sthira* metre.

Results of Saturn in the Natal Sign (in Toṭaka Metre)
Saturn in the natal sign makes one suffer from poison, fire, loss of relatives, homelessness, poverty, wandering, and sorrowful visage. This is the *Toṭaka* metre.

Results of Saturn in the Second Sign (in Vaṁśapatrapatita Metre)
When Saturn occupies the second sign, the person is devoid of beauty and pleasure, weak, and though acquiring wealth through learning, it does not remain—like a drop of water on a leaf. This is the *Vaṁśapatrapatita* metre.

Results of Saturn in the Third Sign (in Lalitā Metre)
Saturn in the third brings wealth, servants, family, camels, buffaloes, horses, elephants, donkeys, houses, luxury, happiness, and health. Though timid, he subdues strong enemies through valor. This is the *Lalitā* metre.

Results of Saturn in the Fourth Sign (in Bhujangaprayāta Metre)
If Saturn occupies the fourth, the person is deprived of friends, wife, and wealth, with a mind crooked and wicked like the crawling of a serpent. This is the *Bhujangaprayāta* metre.

Results of Saturn in the Fifth and Sixth Signs (in Puṭa Metre)
If Saturn occupies the fifth sign, the person is bereft of sons and wealth and always engaged in quarrels. When Saturn is in the sixth sign, he becomes free from enemies and disease and enjoys the lips of a beautiful woman. This is the *Puṭa* metre.

Results of Saturn in the Seventh to Ninth Signs (in Vaiśvadevī Metre)
If Saturn is in the seventh or eighth sign from the natal position, the person wanders about,

deprived of wife and children, and of humble disposition. When Saturn is in the ninth sign, the same results occur, but he also suffers from hatred and heart disease, which destroy his religious inclinations and pious acts. This is the *Vaiśvadevī* metre.

Results of Saturn in the Tenth to Twelfth Signs (in Ūrmimālā Metre)

Saturn in the tenth sign brings loss of learning, fame, and wealth despite apparent engagement in works. In the eleventh, he gives a harsh nature and gain of another's wife and wealth. In the twelfth, he causes a flood of grief and sorrow. This is the *Ūrmimālā* metre.

Reason for Variation in Transit Results Among Individuals (in Vitāna Metre)

Just as in springtime, even when heavy rain pours, a small vessel cannot hold much water, so too a benefic planet grants results according to the time and the worthiness of the recipient. This is the *Vitāna* metre.

Pacification of Malefic Planetary Positions (in Bhujangavijṛmbhita Metre)

One should worship the Sun and Mars with red flowers, perfumes, copper, gold, and a bull; the Moon with a cow, white flowers, silver, and sweets; Venus with fragrant substances, flowers, incense, and offerings; Saturn with black materials; Mercury with gems, silver, and blue flowers; and Jupiter with yellow flowers, perfumes, and gifts. Even if one falls from a height or enters the den of playful serpents, the pacified planets will protect him from harm. This is the *Bhujangavijṛmbhita* metre.

Praise of Planetary Worship (in Udratā Metre)

By worshipping deities and Brahmins, through peace rituals, mantra recitations, vows, charity, self-restraint, and association with the virtuous, all defects arising from inauspicious planetary aspects are destroyed. This is the *Udratā* metre.

Timing of Results for Sun, Mars, Moon, and Saturn; Definition of Gīti and Upagīti Metres

The Sun and Mars produce their results in the first half of a sign, while the Moon and Saturn do so at the end of the sign. A metre in which the first half of both sections of an Āryā verse are even is called *Gīti*, and if the latter halves are even, it is called *Upagīti*.

Time of Mercury's Results (in Upagīti Āryā Metre)

Mercury gives similar results at both the beginning and end of his transit through a sign, just as in the *Upagīti* metre the two halves are equal in measure, and as the company of the virtuous is ever harmonious. This is the *Upagīti* metre. ॥50॥

Instruction on Jupiter's Transit and Nature of Āryā Metre

Just as in the Āryā metre the internal long syllable in an odd Gaṇa (the *Jagana*) diminishes the strength of the verse, so too Jupiter in the middle of an odd sign harms noble men. Likewise, as the sixth Gaṇa of Āryā becomes entirely short, Jupiter in the sixth sign makes men insignificant. This is the *Āryā* metre. ॥53॥

Cancellation of Results When Benefic and Malefic Planets Aspect Each Other (in Narkuṭaka Metre)

When a strong benefic aspects a strong malefic, or vice versa, their opposing powers neutralize

each other, producing neither good nor evil results but only moderate ones. This is the *Narkuṭaka* metre.

Failure of Benefic Results from Weak Planets (in Vilāsa Metre)
Just as the amorous gestures of a beautiful woman are useless before a blind man, so too the auspicious results of planets that are debilitated, combust, or aspected by enemies become void and instead produce misfortune. This is the *Vilāsa* metre.

Yavaneśvara's Commentary — On Sanskrit and Prakrit Correspondence of Metres (in Āryāgīti Metre)
Saturn produces results similar to the Sun. Just as *Āryāgīti* in Sanskrit corresponds to *Skandhaka* in Prakrit, *Vaitālīya* to *Māgadhī*, and *Āryā* to *Gāthā*, so Mercury too gives results corresponding to the nature of his conjunction—auspicious with benefics and inauspicious with malefics.

Definition of Vaitālīya Metre in Prakrit
This metre shares the same form as *Māgadhī*, except that in it, the order of long and short syllables alternates.

Results of Combust Saturn (in Pathyā Metre)
Just as bile increases with the Sun's heat, similarly Saturn, when combust by the Sun's rays, becomes afflicted and gives highly inauspicious results, burning men with misery. Yet to the righteous, who partake of wholesome (Pathya) food, his effects are not so harmful. This is the *Pathyā* metre.

Special Results of the Moon When Conjoined with Other Planets (in Vaktra Metre)
Just as the expression of the face follows the state of the mind—cheerful when the mind is happy and sad when it is troubled—so too the Moon gives results according to the nature of the planet he is joined with: auspicious with benefics, inauspicious with malefics. This is the *Vaktra* metre.

Smallness of Men Under Afflicted Planets (in Śloka Metre)
As in the Śloka metre the fifth syllable in each quarter and the seventh in the second and fourth are short, so too men become lowly under the influence of adverse planets. This is the *Śloka* metre.

Elevation of Men Under Auspicious Planets (in Anuṣṭubh Metre)
Just as a naturally short syllable becomes long when placed at the end of a metrical foot, so too a man born in a humble family becomes honored in society under the influence of favorable planets. This is the *Anuṣṭubh* metre. ‖58‖

Destruction of Undertakings Under Unfavorable Planets (in Vaitālīya Metre)
Just as unprescribed rituals performed for the attainment of spirits destroy the practitioner himself, so also works begun under inauspicious planetary conditions bring ruin to the doer. This is the *Vaitālīya* metre. ‖59‖

Success of Works Under Auspicious Planets (in Aupacchandasa Metre)
When kings undertake campaigns under auspicious planetary alignments, they achieve success even with small forces, as the *Aupacchandasa* metre accomplishes its purpose with few syllables. This is the *Aupacchandasa* metre.

Sunday — Prescribed Actions (in Daṇḍaka Metre, First Section)
If the Sun occupies the ascendant or an upacaya (3rd, 6th, 10th, or 11th) house on Sunday, then actions involving gold, horses, weapons, mountains, forests, royal service, fire rites, and all fierce or regal undertakings are fruitful. This is the *Daṇḍaka* metre (first section).

Monday — Prescribed Actions (Daṇḍaka Metre, Second Section)
On Monday, or when the Moon is in Cancer or in a kendra, auspicious works related to ornaments, pearls, silver, water, food, women, milk, farming, singing, and perfumes succeed. This is the *Daṇḍaka* metre (second section).

Tuesday — Prescribed Actions (Daṇḍaka Metre, Third Section)
On Tuesday, works concerning metals, fire, coral, weapons, surgery, or valor, and activities in forests, forts, or warfare are successful. This is the *Daṇḍaka* metre (third section).

Wednesday — Prescribed Actions (Daṇḍaka Metre, Fourth Section)
On Wednesday, works connected with green gems, learning, perfumery, arts, sciences, writing, and communication succeed, along with any intellectual or diplomatic endeavors. This is the *Daṇḍaka* metre (fourth section).

Characteristic of Caṇḍaka-vṛṣṭiprayāta Daṇḍaka
This metre is defined by having two *Nagaṇa* and thirty-two *Ragaṇa* arrangements.

Thursday — Prescribed Actions (in Varṇaka-Daṇḍaka Metre)
On Thursday, activities involving gold, silver, horses, elephants, cows, medicines, religious rites, and auspicious ceremonies yield success. This is the *Varṇaka-Daṇḍaka* metre.

Friday — Prescribed Actions (in Samudra-Daṇḍaka Metre, First Half)
On Friday, pursuits concerning art, garments, enjoyment, perfumes, marriage, trade, and all pleasures of Venus are fruitful. This is the *Samudra-Daṇḍaka* metre (first half).

Saturday — Prescribed Actions (in Samudra-Daṇḍaka Metre, Second Half)
On Saturday, works related to buffaloes, camels, iron, servants, aged or low-born people, birds, or thieves succeed. Those who ignore these rules, however, gain nothing—even as a man diving into the ocean finds not a drop of water. This is the *Samudra-Daṇḍaka* metre.

Concluding Praise (in Vipulā Āryā Metre)
Knowing the varieties of extensive metres is itself sufficient for mastery. Hence, the sage Varāhamihira composed this collection of metres for the delight of the learned. This is the *Vipulā Āryā* metre.

Chapter – 105

अथ रूपसत्राध्यायः **(Adhyāya on the Rite of Beauty and the Star-Man Diagram)**

Placement of Nakṣatras in the Body of the Nakṣatra-Puruṣa

In the cosmic form of the Nakṣatra-Puruṣa, the Nakṣatras are distributed thus—Mūla in both feet; Rohiṇī in both shanks; Aśvinī in both knees; Pūrvāṣāḍhā and Uttarāṣāḍhā in both thighs; Pūrvaphālgunī and Uttaraphālgunī in the genital and anal region; Kṛttikā at the waist; Pūrvabhādrapadā and Uttarabhādrapadā on the sides; Revatī in the belly; Anurādhā in the chest; Dhaniṣṭhā in the back; Viśākhā in the arms; Hasta in the hands; Punarvasu in the fingers; Āśleṣā in the nails; Jyeṣṭhā in the neck; Śravaṇa in the ears; Puṣya in the mouth; Svātī in the teeth; Śatabhiṣā in the smile; Maghā in the nose; Mṛgaśirā in the eyes; Citrā in the forehead; Bharanī in the head; and Ārdrā in the hair.

One desiring beauty should draw or meditate upon this Nakṣatra-Puruṣa diagram. ॥1–5॥

Commencement Time of the Rūpasatra Vow

When Mūla Nakṣatra falls on a Monday in the bright half of the month of Caitra (Caitra Śukla Aṣṭamī), one should begin this vow by worshipping Viṣṇu and the presiding Nakṣatras, fasting first on that day. Thereafter, with the rising of each succeeding Nakṣatra—Rohiṇī and so on—up to Ārdrā, one should continue the observance of fasts. (As stated by Sage Garga.)

Duties after Completion of the Vow

After completing the vow, one should, according to one's ability, offer to a learned Brāhmaṇa gifts of gold, jewels, garments, and a vessel filled with ghee. ॥7॥

Subsequent Duties

One who desires charm and beauty should worship Brāhmaṇas with offerings of food prepared from milk, ghee, and jaggery, and should donate gold, garments, and silver to them. Beginning with the Nakṣatra of the feet, he should fast and worship Lord Viṣṇu along with the Nakṣatras assigned to each limb. ॥8॥

Result in the Next Birth for One Who Performs This Vow

A man who performs the aforesaid worship becomes endowed with long arms, a broad and well-developed chest, a moonlike face, bright white teeth, a gait like an elephant, lotus-like wide eyes, and captivating beauty like that of Kāma himself. ॥9॥

Result for a Woman Who Performs This Vow

If a woman undertakes this vow, her face shines like the autumn moon; her eyes resemble lotus petals; her teeth and ears are beautiful; her hair is glossy like a bee's body; her speech is melodious; her lips are copper-hued; her hands and feet are lotus-like; her waist bends under the weight of her full bosom; her navel is spiral; her thighs are like banana stems; her hips are

graceful; she is devoted to her husband and has beautiful, tapering toes. Thus, this vow blesses both men and women with divine charm. ॥10–12॥

Praise of the Performer of Rūpasatra
So long as the garland of Nakṣatras shines in the heavens, the person performing this vow radiates beauty in this world. After death, he or she assumes the form of a Nakṣatra and roams the sky until the end of the kalpa. In the next creation, that soul is born as a wise and mighty emperor; and after the fall of that sovereignty, as a wealthy king or a prosperous Brāhmaṇa.

Names of the Twelve Months
Keśava, Nārāyaṇa, Mādhava, Govinda, Viṣṇu, Madhusūdana, Trivikrama, Vāmana, Śrīdhara, Hṛṣīkeśa, Padmanābha, and Dāmodara—these are the names corresponding respectively to the twelve lunar months beginning with Mārgaśīrṣa. ॥14–15॥

Praise of the Dvādaśī Day
By observing fasts on Dvādaśī with devotion, worshipping Keśava, Nārāyaṇa, and others according to the name of the month, and by chanting their names, one attains their eternal abode, where there is no fear of rebirth. ॥16॥

Chapter – 106

अथ उपसंहाराध्यायः **(Adhyāya of Conclusion)**

Glory of Knowledge and the Scripture
I, Varāhamihira, have churned the vast ocean of Jyotiṣa (astronomy and astrology) with the churning rod of intellect and brought forth this radiant moon—the illuminating science of the stars—for the benefit of the world. ॥1॥

Faithfulness to the Ancient Teachers
While composing this treatise, I have not disregarded the meanings contained in the works of the ancient teachers. Therefore, scholars should carefully study both the earlier works and this one, adopting whatever is best from each. ॥2॥

Conduct of the Virtuous and the Wicked
The virtuous, finding even a small virtue amidst an ocean of faults, magnify it; whereas the wicked conceal virtues and exaggerate even the slightest fault. This is the distinction between noble and base men. ॥3॥

Why One Should Present New Works to the Wicked
Just as gold becomes purified when heated by fire, so does a literary work attain refinement when criticized by the wicked. Therefore, one should deliberately recite new compositions before such critics. ॥4॥

Appeal to the Learned
If, in this expanding work, there remain errors of composition, or if anything opposed to established doctrine has been written or omitted, let learned scholars, free from envy, correct them after hearing from the well-versed. ॥5॥

Homage to the Preceptors
Through the grace born of reverence for the feet of the Sun, the sages, and my teachers, I have compiled this work by the intellect thus granted. Therefore, my obeisance is to the ancient masters. ॥6॥

Chapter – 107

अथ शास्त्रानुक्रमण्यध्यायः **(Adhyāya on the Index of the Treatise)**

Collection of the Chapters
The chapters of this treatise are arranged as follows: Śāstrodaya (Introduction to the Science), Sāṁvatsarasūtra, Arkacāra, Candracāra, Rāhucāra, Bhaumacāra, Budhacāra, Gurucāra, Śukracāra, Śanicāra, and Ketucāra. ॥1॥

Then follow: Agastyacāra, Saptarṣicāra, Kūrma-Vibhāga, Nakṣatra-Vyūha, Graha-Bhakti-Yoga, and Graha-Yuddha. ॥2॥

Next: Śaśigraha-Samāgama, Graha-Varṣaphala, Graha-Śṛṅgāṭaka, and the Signs of Clouds' Conception. ॥3॥

Then: Garbhadhāraṇa, Pravṛṣaṇa, Rohiṇī-Yoga, Svātī-Yoga, Āṣāḍhī-Yoga, Vāta-Cakra, Sadyovṛṣaṇa, Kusumalatā, Sandhyā-Lakṣaṇa, and Digdāha-Lakṣaṇa. ॥4॥

Then: Bhūkampa-Lakṣaṇa, Ulkā-Lakṣaṇa, Pariveṣa-Lakṣaṇa, Indrāyudha-Lakṣaṇa, Gandharva-Nagara-Lakṣaṇa, Pratisūrya-Lakṣaṇa, Nirdghāta-Lakṣaṇa, Sasyajāta, Dravya-Niścaya, and Ardha-Kāṇḍa. ॥5॥

Then: Indradhvaja-Sampat, Nīrājana-Vidhi, Khañjana-Lakṣaṇa, Utpāta-Lakṣaṇa, Mayūra-Citraka, Puṣya-Snāna, Paṭṭa-Lakṣaṇa, Khaḍga-Lakṣaṇa, and Vāstu-Vidyā. ॥6॥

Followed by: Udakārgala, Vṛkṣa-Āyurveda, Prāsāda-Lakṣaṇa, Vajra-Lepa, Pratimā-Lakṣaṇa, Vanapraveśa, and Surabhavana-Pratiṣṭhā. ॥7॥

Then: Go-Lakṣaṇa, Śvāna-Lakṣaṇa, Kukkuṭa-Lakṣaṇa, Kūrma-Lakṣaṇa, Chāga-Lakṣaṇa, Puruṣa-Lakṣaṇa, Pañca-Mahāpuruṣa-Lakṣaṇa, Strī-Lakṣaṇa, and Vastra-Viccheda-Lakṣaṇa. ॥8॥

Then: Cāmara-Lakṣaṇa, Daṇḍa-Parīkṣā, Strī-Praśaṁsā, Saubhāgya-Karaṇa, Kāndarpika, Gandha-Yukti, Puṁ-Strī-Samāgama, and Śayana-Vidhi. ॥9॥

Then: Vajra-Parīkṣā, Muktā-Lakṣaṇa, Padmarāga-Parīkṣā, Marakata-Parīkṣā, Dīpa-Lakṣaṇa, Dantakāṣṭha-Lakṣaṇa, and Śakuna-Miśra-Phala. ‖10‖

Then: Antara-Cakra, Viruta, Śva-Cakra, Śivāruta, Mṛga-Cheṣṭā, Aśva-Cheṣṭā, Hasti-Cheṣṭā, and Vāyasa-Vidyā.
Within Śivārutādhyāya are included Śva-Cheṣṭā, and within Go-Cheṣṭitādhyāya are described the marks of animals such as camels, tigers, and lions, along with other beasts like cats, boars, and jackals. ‖11‖

Then: Pākādhyāya, Nakṣatra-Guṇa, Tithi-Guṇa, Karaṇa-Guṇa, Nakṣatra-Jātaka, Graha-Gocara, Nakṣatra-Puruṣa, and Rūpa-Satra chapters. ‖12‖

Number of Chapters and Verses
Arranged in this order, the treatise contains one hundred and seven chapters and approximately four thousand verses. The five chapters—Vāta-Cakra, Aṅga-Vidyā, Piṭaka-Lakṣaṇa, Aśva-Lakṣaṇa, and Gaja-Lakṣaṇa—are excluded from this count but included in the total verse tally, making up four thousand in all. ‖13‖

Conclusion
The supplementary topics omitted here are described in the work *Yātrā*. I have also authored the celebrated *Jātaka* and the renowned *Pañca-Siddhāntikā*. ‖14‖
